

Swati Bhabat

248-719-9560 | swati.bhabat3@gmail.com

Professional Summary

- Over 5+ years of experience in designing, developing, and maintaining full stack web applications using **Java, J2EE, Spring Framework** (Spring Core, Spring MVC, Spring Data JPA, Spring Cloud, Spring Boot, Spring Security), **Angular, React** frameworks and **Microservices** architecture.
- Expertise in developing **RESTful Web Services** to support frontend **Angular** or **React** based applications and backend integration using **JDBC, Hibernate**, and Spring Data JPA, OAuth2 Security, leveraging cloud solutions.
- Proficient in **Core Java version 8**, Collections, Multithreading (**Executor** Framework), Concurrency, Functional programming, **Lambda** Expressions, **Streams** API, Exception Handling, Generics, Java I/O, JDBC, Design Patterns, and new Java features (e.g., **Records**, Sealed Classes).
- Experienced in integrating **Kafka, Elasticsearch**, and **MongoDB** for real-time data processing and analytics.
- Skilled in cloud-based data processing and application deployment with **Kubernetes** and **GCP** Compute Engine.
- Proficient in **AWS** services such as **EC2, Lambda, S3, Code Star, RDS, CloudWatch, API Gateway, DynamoDB**, and **ECS** for cloud computing, serverless functions, storage, monitoring, and container management.
- Expertise in designing and developing **microservices**-based architecture using Java, Kafka, and AWS/GCP, with a focus on scalability, resilience, and fault tolerance.
- Proficient in monitoring and troubleshooting AWS resources using **CloudWatch, CloudTrail**, and other monitoring tools.
- Strong knowledge of **AWS** Identity and Access Management (IAM) for managing user roles, permissions, and policies.
- Experienced in designing, developing, and implementing **cloud-native architectures** and **microservices**-based applications on AWS using AWS services such as Lambda, S3, EC2, RDS, API Gateway etc.
- Proficient in **AWS** and **Terraform** with extensive experience focusing on services EC2, Elastic Beanstalk, Elastic Load Balancers, CloudWatch, CloudFront, Cloud Formation, IAM, S3, ELB, RDS, Elastic ache, SNS, Lambda, SQS.
- Strong understanding of AWS best practices for security, scalability, and performance optimization.
- Experienced in migrating on-premises infrastructure to **AWS** cloud and automating resources with AWS CLI and SDKs.
- Proficient in **NodeJS** for building scalable, asynchronous server-side applications.
- Experienced with **Google Cloud Platform (GCP)** services like **Big Query, Bigtable, Cloud Functions, Cloud Run**, and **Cloud SQL** for data management, analytics, and scalable application deployment.
- Hands-on experience with Oracle **PL/SQL** and MS SQL Server, including Stored Procedures, Functions, Packages, Triggers, Dynamic SQL, and Bulk Binds.
- Proven ability to **optimize** backend performance through query optimization, indexing, and table partitioning.
- Involved in all phases of **SDLC**, ensuring timely project delivery with strong **Agile** methodologies (Scrum).
- Experienced in Analyzing the existing legacy Java-based application architecture and identify areas for modernization and **migration to microservices**.
- Experienced in developing and maintaining Continuous Integration and Continuous Delivery (**CI/CD**) pipelines for web applications using **Jenkins** and Bamboo.
- Experienced in creating innovative and effective User interfaces with **HTML5, CSS, JavaScript, Bootstrap, Angular** and **React**.
- Extensive **MongoDB** development experience (reports, schema design, map reduce functions) and migrations from SQL relational databases to **NoSQL** databases like MongoDB, Cassandra, Oracle DB.
- Expertise in building real time data pipelines using Spring Kafka and zookeeper apart from Kafka, RabbitMQ and JMS.
- Expertise in Object-relational mapping (**ORM**) using **Hibernate**.
- Having knowledge of Apache **Spark** and experience in handling messaging services using Apache **Kafka**.
- Expert in designing and developing presentation and **CRUD** operation microservices.
- API testing using **SoapUI, Postman** and load testing using **LoadRunner**.
- Experience in testing with **JUnit** Framework using **Mockito** and Easy Mock, Spring JUnit Runner, and **JMeter** and expertise in several testing environments such as JUnit, Selenium, CURL, Jenkins, SoapUI, and System Testing.
- Containerizing Java applications using **Docker**, OpenShift and **Kubernetes** ensuring portability, efficiency, and scalability.
- Experience with DevOps **CI/CD** tools including Tekton, Jenkins, Hudson, CVS, GitHub Actions, Git, Terraform, Docker.
- Skilled in Project management tools like Atlassian JIRA.

Internship

Cortracker Inc, USA

Oct 2024

Role/Title: Full Stack Developer

Responsibilities:

- Develop full-stack software solutions using **C#, ASP.NET Core, Angular 16**, and **Spring Boot** for high-performance, scalable applications within **Java microservices architecture**.
- Collaborate with architects to design and implement robust, scalable systems, selecting optimal technologies and defining system components for seamless integration and efficiency.
- Debug and troubleshoot software with advanced tools, leveraging **Git/GitHub** for version control and applying **Test Driven Development (TDD)** and **REST APIs** for reliable, maintainable code.
- Manage **SQL Server** connections, implement **REST API** interactions, and utilize **GCP** for cloud-based solutions and streamlined deployment.
- Build responsive, user-friendly interfaces using **Angular 16, TypeScript, CSS3, HTML5**, and **Bootstrap 5.3**.
- Create clear documentation, technical guides, and user manuals, provide training and support to ensure solution maintainability and ease of use.
- Develop and optimize server-side applications using **Node.js** core APIs (File System, Clusters, Console, OS) to enhance performance and scalability.
- Stay current with **.NET, Angular, and Spring Boot** updates, adhering to best practices to enhance application quality and performance.
- **Environment:** Java 17, Spring 5.3, Hibernate 5.3, REST APIs, GCP (Big query, Big Table, Cloud SQL, Cloud Run, GKE), C#, .NET Core (ASP.NET Core Web API, Entity Framework Core), SQL Server, HTML5, CSS3, Bootstrap 5.3, Angular 16, Node js 18, NPM 10, Swagger, VS Code, Visual Studio, SSMS, Git, GitHub, Jenkins, Jira

Education

- **Master of Science: Information Studies (GPA: 3.95/4)** Aug 2024
Trine University Detroit, MI, USA
Relevant Coursework: Advanced database, Data Mining, and Data Visualization, Cybersecurity, Network Management Data Science & Big Data, Object Oriented Programming in **Java**, Statistics & Quantitative Methods, Finance for Engineers, Project Management, Information Studies Capstone
- **Bachelor of Technology: Computer Science and Engineering (GPA: 8.74/10)** May 2012
SGGSIE&T, India
Relevant Coursework: Java, C, C++, DSA, DBMS, Software engineering, Operating Systems, Computer networks, Artificial neural networks, Computer algorithms, Engineering Mathematics

Technical Skills/Tools

- **Languages:** Java, JavaScript, TypeScript, NodeJS, jQuery, HTML, XML, CSS, SQL, PL/SQL, T-SQL, Python, C, C++, Unix/Linux Shell Script
- **Cloud Platform:** Google Cloud Platform, Amazon Web Services
- **GCP Services:** Big Query, Bigtable, Cloud Functions, Cloud Run, Cloud SQL, Compute Engine
- **AWS Services:** EC2, Lambda, S3, Code Star, RDS, CloudWatch, API Gateway, ECS
- **Application Development:** NodeJS, Spring Boot, Spring Framework, Hibernate ORM, Oracle Forms & Reports, Angular Framework
- **ERP Systems:** Oracle EBS R12 (Financials, Inventory, Supply Chain, Procurement, Service, GTM, Workflow)
- **Databases:** Oracle 10g/11g/12c/18c/19c/21c, MS SQL Server, PostgreSQL, MySQL, MongoDB
- **Operating System:** Windows 2000/XP/7/8/10, Linux, Unix
- **CI/CD tools:** GitHub, Docker, Jenkins, Maven, Git plugin
- **Other tools:** SQL*plus, Toad, SQL Developer, ServiceNow, Jira, HP ALM, DocIT, Putty, Vi editor, JShell, pgAdmin4, DBeaver, Oracle Forms Builder, Report Builder, SVN, Tableau Desktop, Eclipse, PowerBuilder IDE, Spring Tool Suite, PyCharm, VS Code, IntelliJ, Postman, SSMS, SSRS, SSIS

Professional Certifications

- Oracle Certified Professional **Java SE 6** Programmer (**OCJP**)
- Oracle Associate Certified (**OCA 11G**)
- Oracle Cloud Infrastructure (**OCI**) Foundations Associate Certified

Professional Work Experience

Accenture Solutions Private Limited, India

Mar 2021 – Aug 2022

Role/Title: Application Development Analyst

Client Name: Bristol Myers Squibb, USA

Project Description: The Oracle Thesaurus Management System (**TMS**) is a customizable coding system integrated with external clinical study software like **Medidata Rave®** and Oracle Clinical. TMS standardizes clinical terminology by mapping verbatim terms to standard dictionary terms. Medidata Rave® is a cloud-based clinical data management system that enables the capture, management, and reporting of clinical research data. **Rave EDC** streamlines the clinical trial process and assists life sciences organizations in optimizing their R&D investments.

Responsibilities:

- Architected and deployed cloud-based clinical data management solutions using Amazon Web Services (**AWS**), leveraging Amazon **RDS** for relational database services, Amazon **Redshift** for real-time analytics, and **DynamoDB** for scalable **NoSQL** database management.
- Developed and managed **RESTful** web services using **Node.js**, **Java 8**, Spring **Boot**, Spring **JPA**, and Spring **REST API**, ensuring seamless integration with AWS based backend services.
- Orchestrated and containerized **microservices** on AWS Elastic Kubernetes Service (**EKS**), facilitating efficient deployment, scaling, and management of cloud-native applications.
- Performed **CRUD** operations using Spring JPA, integrated with Amazon **RDS** and **DynamoDB**, to manage clinical data across distributed systems.
- Implemented serverless solutions using AWS **Lambda** and AWS **Fargate** to streamline data processing and automate backend services, enhancing system scalability and flexibility.
- Conducted unit testing with **JUnit** and **Mockito** for Java services, ensuring test coverage and functionality validation for all critical components.
- Created and managed database objects such as tables, triggers, views, and stored procedures using **SQL Developer** and DBeaver for **Oracle** and **PostgreSQL** environments.
- Optimized database performance by tuning indexes, execution plans, and partitioning tables in **DynamoDB** and Amazon **RDS**, improving query performance by **40%**.
- Automated user access provisioning using **AWS Lambda**, streamlining the provisioning process with API-driven automation, reducing manual effort.
- Collaborated with QA teams to perform system testing using HP ALM and deployed services using **CI/CD** pipelines on AWS EC2, ensuring reliable and scalable deployments.
- Troubleshoot production issues, performed root cause analysis, and enhanced system performance using **AWS CloudWatch**, improving overall system reliability.
- Mentored junior developers on **AWS** services, **microservices** architecture, and **Java** development, fostering a collaborative and growth-oriented work environment.
- Developed dynamic and responsive front-end applications using **Angular**, utilizing HTML5, CSS3, TypeScript, and Bootstrap implementing components, services, and routing for enhanced user experience, performance, two-way data binding, and efficient component-based architecture.
- Integrated **MongoDB** for flexible **NoSQL** database management, performing aggregation queries and ensuring efficient data storage for web applications.
- Designed and optimized **MongoDB** database schemas and queries for efficient data storage and retrieval.
- Optimized data retrieval with **MongoDB** indexing and configured cloud clusters with MongoDB Atlas
- Ensured secure and optimized API interactions between **Angular** and **MongoDB** using **Express.js** for streamlined full-stack application development.
- Prepared and maintained comprehensive technical documentation, including requirements specifications, functional design documents, and architecture diagrams.
- Automated repetitive tasks using Unix shell scripts, scheduled with crontab, enhancing the efficiency of **PL/SQL** development processes.
- Designed, maintained, and improved enterprise-level applications using **PowerBuilder 2019** and **PL/SQL**, ensuring smooth integration with Oracle databases and streamlined clinical trial operations.

Environment: Java 8, Spring 5.3, Hibernate 5.3, Spring Batch, Spring Boot, Spring Security, JPA, JMS, RESTful Web Services, HTML5, CSS3, Angular 7, Postman, Oracle 12c, MongoDB, AWS, Docker, Tomcat, Eclipse, Cryptography, Log4j, JIRA, XML, Microservices, Kafka, PowerBuilder 2019, PL/SQL, DBeaver, PostgreSQL, SQL Developer, JUnit, Mockito.

KPIT Technologies Ltd, India

Aug 2013 – Dec 2015

Role/Title: Software Engineer

Client Name: Cummins Inc. USA

Project Description: Global Order Management Systems (**GOMS**) is Customized ERP System and used on global platform for all Cummins Distribution centers. The system deals with Sales and purchase order processing and managed till material shipment and invoice generation and corresponding GL posting. The major locations of GOMS are - Memphis, Singapore, Mechelen, China, Atlanta, Bogota etc. The regional distribution centers of respective locations are also maintained in GOMS

Responsibilities:

- Developed core modules using **Java 6** and **Spring Framework**, implementing **Inversion of Control (IoC)** and **Dependency Injection (DI)** for a modular, scalable architecture.
- Designed and implemented **RESTful web services** using **Spring MVC**, providing APIs to enable efficient communication between client and server applications.
- Integrated **Hibernate ORM** to manage database transactions, leveraging caching techniques and optimizing **HQL** for complex data queries.
- Enhanced server-side performance using **Node.js (Express.js)**, building scalable, event-driven applications.
- Developed responsive front-end features using **HTML5**, **CSS3**, **JavaScript**, and **Angular 2**, enabling intuitive user interfaces.
- Collaborated with cross-functional teams including Middleware, Red Prairie, and Material Planning Systems, to build and test robust integration solutions.
- Followed best practices for modular development, ensuring reusable components, effective exception handling, and code optimization.
- Conducted unit testing with **JUnit** and automated routine processes using **Unix shell scripts**, driving operational efficiency.
- Implemented **Spring Batch** to efficiently process large volumes of records and integrated with Control-M to schedule jobs.
- Applied **design patterns** like Singleton, Data Access Objects, Factory, and MVC patterns to enhance application architecture.
- Designed **REST-based Microservices** using Spring Boot for modular and scalable architecture. Conducted API Endpoint testing using **Postman** to ensure functionality and reliability.
- Implemented persistence layer using Spring **JDBC** template to store data in **Oracle** database and interfaced with **MongoDB** backend using Http service to fetch JSON contracts.
- Managed unstructured data using **MongoDB** and connected to the database using Mongoose Connector. Utilized **Swagger** API for auto-generated documentation of all REST calls.
- Composed and executed MongoDB scripts and queries for data retrieval and testing from **NoSQL** databases. Developed real-time processing and core jobs using Spark Streaming with **Kafka** as a data pipeline system.
- Implemented Spring Boot microservices to process messages within the **Kafka** cluster setup. Generated JSON requests and validated responses using Postman Interceptor and Swagger UI.
- Collaborated on **Angular 2** Controllers, Directives, Services, Pipes, Guards, and Angular Routing for dynamic front-end interactions.
- Created Single Page Applications (**SPA**) utilizing Angular 2, HTML5, CSS3, and Bootstrap 3 for streamlined user interface design.
- Deployed **microservices** and data processing pipelines to Google Cloud Platform (**GCP**) using services like Cloud Functions, Big Query, and Cloud Run for scalable, cloud-native applications.
- Managed cloud-based data storage and analytics with GCP services, including integrating **Big Query** and **Bigtable** for large-scale data management.
- Managed containerized microservices with **Docker** and **Kubernetes (GKE)** for efficient scaling and orchestration

Environment: Java 6, Spring 4, Hibernate 4.2, Spring MVC, Spring Batch, Spring Boot, Spring Security, **GCP**(Big Query, Big Table, Cloud Functions, Cloud Run), JPA, JMS, Web Services (REST), HTML5, CSS3, Node.js (Express.js), Angular 2, Oracle 10g, Docker, Tomcat, Eclipse, Log4j, JIRA, Pure XML, Kafka, Junit, Postman, Swagger UI, JIRA, XML, Microservices, Kafka, PL/SQL, Mockito,

Professional Development

Seed Certified Technology Specialist (SCTS)

Nov 2012 – May 2013

- Issuing Organization: Seed Infotech Limited, India
- Technologies covered: C, C++, Java, JSP, Servlets, EJB, Spring Framework, Unix Shell script, SQL, PL/SQL, Android
- Relevance: The SCTS certification provided a strong foundation in C, C++, Java, SQL, and PL/SQL. Additionally, the Android development training enhanced my proficiency in creating mobile applications and navigating dynamic, technology-focused environments. These skills make me an effective contributor to software development projects and enable me to excel in innovative tech-driven settings.

Achievements

- Awarded with “Wow Award” for successfully implementing and delivering Release 2 2014 without defects.
- BMS client Recognized with “Wow” for successfully implementing NewCO user access automation in 2022.

- Awarded with “Wow Award” for hard work and dedication towards Release 1 2015.
