

Shahrukh Syed
Senior Java Developer - Full Stack

Phone: 872-359-2046 | **Email:** shahrukhsy02@gmail.com | **Linkedin:** <https://www.linkedin.com/in/syed-shahrukh0201/>

Professional Summary

- Around 7 years of experience in Full-Stack Java Development with deep expertise in backend engineering, microservices, and cloud-native architectures.
- Proficient in Java 17+, Spring Boot 3.x, Spring Cloud, and modern backend frameworks ensuring scalability, security, and performance.
- Skilled in building microservices, RESTful APIs, and event-driven systems using Kafka, RabbitMQ, and AWS SNS/SQS.
- Experienced in frontend development using React.js 18, Angular 17, and TypeScript to build responsive, modern web applications.
- Strong knowledge of CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI/CD for automated builds, testing, and deployments.
- Hands-on with containerization using Docker and orchestration via Kubernetes, OpenShift, and Helm for scalable deployments.
- Expert in cloud-native development across AWS, GCP, and Azure—leveraging services like Lambda, Cloud Functions, ECS, and Cloud Run.
- Proficient in Infrastructure as Code (IaC) using Terraform, CloudFormation, and Ansible to manage multi-cloud environments.
- Experienced with relational and NoSQL databases including PostgreSQL, MySQL, MongoDB, Cassandra, Redis, and Elasticsearch.
- Applied observability practices using OpenTelemetry, Prometheus, Grafana, and ELK Stack for real-time monitoring and tracing.
- Strong focus on performance tuning, multithreading, and optimizing distributed systems for low latency and high throughput.
- Advocate of DevOps culture with emphasis on automation, CI/CD, and Agile methodologies for rapid software delivery.
- Hands-on experience integrating AI/ML APIs and predictive analytics pipelines using TensorFlow, PyTorch, and AWS SageMaker.
- Secure coding practices implemented using OAuth2, JWT, and API Gateway for enterprise-grade API authentication and governance.
- Excellent communicator and mentor fostering collaboration, code quality, and continuous improvement across engineering teams.

Technical Skills

Programming Languages: Java 17+, Python, Golang, JavaScript (ES6+), TypeScript, SQL, PL/SQL, Kotlin, Rust

Frameworks & Libraries: Spring Boot 3.x, Spring Cloud, Hibernate, JPA, Microservices, Jakarta EE, React.js 18, Angular 17, Node.js, Express.js, Next.js, NestJS

Cloud Platforms: Amazon Web Services (EC2, Lambda, S3, ECS, EKS, CloudFormation, API Gateway), Google Cloud Platform (GCS, Cloud Run, Pub/Sub, BigQuery, Cloud Functions), Microsoft Azure (App Services, AKS, Functions, ADF, Synapse)

DevOps & CI/CD Tools: Jenkins, GitHub Actions, GitLab CI/CD, ArgoCD, Spinnaker, Nexus, SonarQube

Containerization & Orchestration: Docker, Kubernetes (EKS, GKE, AKS), Helm, OpenShift, Podman

Infrastructure as Code (IaC): Terraform, AWS CloudFormation, Ansible, Puppet, Chef

Databases: PostgreSQL, MySQL, Oracle, MongoDB, Cassandra, Redis, DynamoDB, Elasticsearch, Neo4j

Messaging & Streaming: Apache Kafka, RabbitMQ, AWS SQS/SNS, Google Pub/Sub

Monitoring & Observability: Prometheus, Grafana, OpenTelemetry, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk

Version Control & Collaboration: GitHub, GitLab, Bitbucket, SVN, JIRA, Confluence

Testing & Quality Assurance: JUnit 5, Mockito, Selenium, Postman, RestAssured, Cucumber (BDD), JMeter, PyTest

Security & API Management: OAuth2, JWT, API Gateway, Keycloak, Okta, AWS Cognito

Web & Frontend Technologies: HTML5, CSS3, Bootstrap, JSON, XML, REST, GraphQL, Progressive Web Apps (PWA), WebAssembly

Big Data & Analytics: Apache Spark, Airflow, Hadoop, Databricks, BigQuery

Serverless & Edge Computing: AWS Lambda, Google Cloud Functions, Cloudflare Workers, AWS CloudFront

AI/ML Integration: TensorFlow, PyTorch, AWS SageMaker, Vertex AI

Professional Experience

Comcast - Chicago, IL

Senior Java Developer

Feb 2023 – Present

Context: As a Senior Java Developer at Comcast, I designed and developed cloud-native microservices and RESTful APIs, optimized data pipelines, implemented real-time streaming with Kafka, automated infrastructure with Terraform, deployed services via Docker and Kubernetes, and integrated monitoring and security solutions, enabling scalable, secure, and high-performing network and customer systems.

- Architected modular, cloud-native microservices using Java 17 and Golang for Comcast's network and customer systems.
- Designed domain-driven microservice modules to handle critical workflows like billing, provisioning, and device management, improving service agility.
- Developed RESTful APIs for healthcare EDI processing, ensuring seamless data exchange and HIPAA compliance.
- Ensured data integrity and regulatory compliance through encrypted transmission and strict validation for EDI X12 transactions.
- Optimized ETL processes across SQL and Postgres, improving data availability and reducing latency by 40%.
- Re-engineered data pipelines to support incremental loads and parallel processing, cutting batch times significantly.
- Implemented Kafka for real-time data streaming, supporting large-scale event-driven integrations.
- Designed Kafka producers and consumers to manage millions of daily customer and network events, improving system responsiveness.
- Automated infrastructure provisioning and configuration using Terraform, ensuring consistent, version-controlled environments across AWS and on-prem data centers.
- Containerized applications with Docker and deployed to Kubernetes clusters, ensuring high availability.
- Managed CI/CD pipelines via Jenkins and GitLab, implementing automated builds, tests, code quality checks (SonarQube), and multi-environment deployments.
- Integrated monitoring with Prometheus and Grafana, enabling proactive system performance management.
- Designed responsive React.js and Angular UI components, improving user experience and front-end integration.
- Containerized Java and Golang services using Docker, standardizing runtime environments and reducing deployment failures.
- Developed Spring Boot microservices secured via OAuth2 and JWT, strengthening API authentication.
- Deployed applications into Kubernetes clusters (EKS) with Helm charts, ensuring scalability, rolling updates, and high availability.
- Performed cloud cost optimization across AWS environments, reducing operational expenses by 25%.
- Integrated services with API Gateway and Keycloak for centralized identity and access management.
- Integrated Prometheus and Grafana dashboards for proactive monitoring of service metrics, alerting, and system health visualization.
- Collaborated cross-functionally with DevOps, QA, and Data Engineering teams in Agile sprints to accelerate delivery.

Key Technologies:

Java 17, Golang, Spring Boot, React.js, Angular, Docker, Kubernetes (EKS), Helm, Kafka, SQL/Postgres, Terraform, AWS (EC2, S3, Lambda), Jenkins, GitLab, SonarQube, Prometheus, Grafana, OAuth2/JWT, API Gateway, Keycloak, Microservices, CI/CD, Agile/Scrum.

CME Group - Chicago, IL

Software Engineer - Backend

Jun 2020 - Jan 2023

Context: As a Backend Software Engineer at CME, I developed high-performance trading and clearing services using Java and Golang, implemented real-time data streaming with Kafka, optimized AWS workloads, containerized services with Docker/Kubernetes, automated CI/CD pipelines, and ensured system reliability, security, and monitoring with Prometheus, Grafana, and OAuth2/JWT.

- Engineered backend trading services using Java 11/17 and Golang, forming the foundation for CME Globex and CME ClearPort supporting low-latency trade execution and clearing operations.

- Designed high-performance service modules to handle trade matching, settlement, and position management, ensuring 24/7 system reliability.
- Implemented high-throughput Kafka clusters for real-time market data processing and synchronization.
- Optimized AWS EC2 workloads and serverless Lambda integrations, improving platform scalability.
- Built and maintained automated CI/CD pipelines using Jenkins, integrating build, test, and deployment workflows across multiple environments.
- Built microservices architecture and RESTful APIs to support trading and clearing operations.
- Created custom Grafana alerts and dashboards for latency spikes, Kafka consumer lag, and database performance metrics.
- Containerized workloads using Docker and Kubernetes, improving deployment efficiency and resilience.
- Integrated Address Sanitizers and CMake to identify memory leaks, improving system reliability.
- Enhanced OAuth2/JWT-based API authentication ensuring compliance with industry-grade security standards.
- Created real-time dashboards with Prometheus and Grafana for performance and health monitoring.
- Applied Terraform for IaC automation, standardizing AWS infrastructure deployments.

Key Technologies:

Java 11/17, Golang, Spring Boot, Microservices, REST APIs, Apache Kafka, AWS (EC2, Lambda), Docker, Kubernetes, Jenkins, CI/CD, Terraform, Prometheus, Grafana, OAuth2/JWT, Address Sanitizers, CMake.

CNA - Chicago, IL

Java Developer - Backend

Nov 2018 - May 2020

Context: Developed RESTful APIs and event-driven workflows using Java EE, RabbitMQ, and NiFi, optimized database performance, automated AWS infrastructure and CI/CD, and built responsive UIs and monitoring dashboards to support reliable enterprise applications.

- Developed RESTful APIs using Java EE and JAX-RS, supporting enterprise application integrations.
- Designed modular API endpoints to handle high-volume enterprise transactions, improving interoperability between internal services.
- Applied MVC architecture patterns and dependency injection to simplify code maintenance and enhance reusability.
- Optimized Oracle PL/SQL queries improving backend data retrieval performance by 35%.
- Collaborated with database administrators to optimize query execution plans and reduce latency in batch data processing.
- Implemented RabbitMQ for asynchronous message processing enhancing real-time data flow.
- Developed message consumers and producers to handle event-driven operations such as transaction notifications and audit logging.
- Applied dead-letter queue and message retry policies in RabbitMQ for fault-tolerant message delivery.
- Automated data workflows with Apache NiFi increasing operational efficiency and throughput.
- Designed NiFi templates for ETL data transformations, reducing manual intervention and operational bottlenecks.
- Assisted DevOps with Ansible and Puppet configurations for infrastructure automation.
- Configured AWS EC2 and S3 for scalable, secure cloud resource management.
- Created responsive UIs using Vue.js and Bootstrap improving user experience for web apps.
- Implemented CI/CD with Bamboo reducing deployment effort by 50%.
- Developed monitoring dashboards using ELK Stack (Elasticsearch, Logstash, Kibana) for log analytics.
- Collaborated under Agile methodology ensuring on-time sprint deliverables.

Key Technologies:

Java EE, JAX-RS, REST APIs, Oracle PL/SQL, RabbitMQ, Apache NiFi, Ansible, Puppet, AWS EC2/S3, Vue.js, Bootstrap, Bamboo (CI/CD), ELK Stack (Elasticsearch, Logstash, Kibana), Agile/Scrum.

Certifications

- AWS Certified Solutions Architect – Associate
- Microsoft Certified: Azure Fundamentals
- Oracle Certified Professional: Java SE 11 Developer
- Software Development Life Cycle(SDLC)

Education

- M.s in Computer Science - Loyola University - Chicago, IL
