SHAREPOINT & POWER PLATFORM DEVELOPER

PROFESSIONAL SUMMARY

Results-driven SharePoint Developer and Power Platform Specialist with a proven track record in designing, developing, and optimizing solutions across the Microsoft 365 ecosystem. Adept at leveraging SharePoint Online, Power Platform (Power Apps, Power Automate, Power BI), and Dynamics 365 to create scalable, efficient, and secure enterprise-level solutions. Extensive experience in migrating legacy SharePoint sites, integrating Power Platform solutions with ERP systems, and building model-driven and canvas apps. Experienced in developing custom workflows, automating business processes, and optimizing SharePoint performance. Excellent problem-solving and troubleshooting skills, with hands-on experience supporting senior leadership and cross-functional teams.

- Streamlined business processes by developing custom workflows using Power Automate, seamlessly integrating with SharePoint to improve operational efficiency across departments.
- Built innovative, low-code applications with Power Apps, enabling rapid development of enterprise solutions and reducing time-to-market.
- Led successful migrations of legacy SharePoint sites to SharePoint Online, ensuring smooth transitions, data integrity, and minimal disruptions.
- Integrated SharePoint with Microsoft 365 tools, Dynamics 365, and third-party applications, driving seamless data flow and business continuity.
- Enhanced SharePoint user interfaces using SPFx, ReactJS, and TypeScript, creating modern, interactive web parts and pages that improved user engagement.
- Optimized SharePoint performance through best practices, proactive troubleshooting, and custom solutions tailored to meet unique business needs.
- Provided strategic leadership and guidance to cross-functional teams, ensuring alignment of SharePoint and Power Platform solutions with organizational goals and delivering results within Agile frameworks.

CORE COMPETENCIES

SharePoint Development | SharePoint Framework (SPFx, ReactJS) | Power Apps Development | Workflow Automation (Power Automate) | Custom Solutions | Cross-Platform Integration | Office 365 Integration | SharePoint Migrations (On-Prem to Online, File Shares) | Data Management | Power BI Development (DAX, Data Modeling, Visualization) | Problem-Solving | Communication | Agile Methodologies | JavaScript | TypeScript | HTML/CSS | SQL | Azure DevOps | Testing | PowerShell

WORK EXPERIENCE

SharePoint Developer/Power Platform Developer

HARTFORD, Hartford, CT (Remote)

Jan 2022 – Present

- Designed, built, and maintained advanced Power Platform solutions such as model-driven and canvas apps, Power Automate workflows, and custom components.

- Integrated Power Platform solutions with ERP, SharePoint, Dataverse, and third-party applications to ensure smooth connectivity and process improvement.
- Conducted workshops, personalized demonstrations, and end-user training to increase user acceptance and productivity within the Microsoft 365 environment.
- Collaborated with company executives to gather ambiguous requirements and turn them into practical technological solutions that fit with business goals.
- Supported and communicated with senior leaders and executive teams, giving technical insights and ensuring that initiatives aligned with corporate goals.
- Proficient in using Power Fx, JavaScript, C#, TypeScript, DAX, and Power Query M to create and improve low-code/no-code solutions.
- Created and updated data models in Dataverse, including custom tables, calculated columns, relationships, and business rules to meet company requirements.
- Automated complex business processes utilizing Microsoft Power Automate and Azure services such as Logic Apps, Azure SQL Database, and API Management.
- Worked as a Microsoft Power Platform Subject Matter Expert, guaranteeing coding standards compliance, delivering secure solutions, and offering technical support to junior engineers.
- Designed and applied UX/UI principles to application development, improving user experience and interface efficiency.
- Implemented agile development approaches and version control practices (e.g., Git, Azure DevOps) across all phases of the SDLC.
- Performed extensive debugging and optimization to resolve technical difficulties and ensure high performance of Power Platform solutions.
- Used ShareGate to migrate SharePoint features and data, as well as handle sophisticated configurations within SharePoint Online.
- Built and maintained data visualization dashboards to provide insights for executive reporting and decision-making.
- Ensured that solutions were scalable, stable, and safe, following best practices and Microsoft Wave roadmap features.
- Built customized components and connectors, integrated APIs, and used RESTful services to expand functionality.
- Supported SaaS applications by ensuring data quality, managing security, and integrating across platforms.
- Created knowledge transfer documentation, delivered presentations, and acted as the key link between product owners and project teams.
- Used powerful Azure tools and services to build, administer, and support high-availability Power Platform applications.
- Demonstrated great problem-solving abilities by effectively managing challenging tasks and delivering creative solutions.

SharePoint Developer

Comcast- Fairfax, VA

Dec 2018- Dec 2021

- Designed, developed, and managed SharePoint portals and applications, ensuring a consistent digital experience across various platforms (2016, 2019, SPO O365).
- Migrated and consolidated SharePoint sites and workflows, including legacy systems (e.g., SharePoint 2010/2013), to modern platforms like SharePoint Online, maintaining data integrity and minimizing interruptions.
- Implemented SharePoint Framework (SPFx) solutions using ReactJS, TypeScript, and JavaScript for custom web elements and modern sites.

- Created custom workflows and forms with SharePoint Designer, Visual Studio, and Power Automate to automate business operations and increase productivity.
- Integrated SharePoint with Dynamics 365, Power BI, and Azure services, using APIs and Microsoft Graph to enhance system connectivity.
- Created dashboards using Power BI, incorporating key performance metrics and data visualizations for data-driven decision-making.
- Ensured high availability and performance by troubleshooting technical issues with SharePoint apps, workflows, and configurations.
- Facilitated Power Platform and Dynamics 365 connectors, improving workflows and establishing smooth connectivity with SharePoint applications.
- Optimized performance and resolved issues in SharePoint environments, including physical, virtual, on-premise, and cloud infrastructures.
- Provided technical mentoring and leadership in SharePoint design and development to junior developers, fostering an environment of continual learning and innovation
- Created and administered SharePoint sites, lists, libraries, and permissions while following scalability and security best practices.
- Created and deployed SharePoint branding solutions, including custom graphical designs for company websites.
- Assisted with the deployment and operation of SharePoint Search Services, as well as unique solutions to improve search capabilities
- Designed and maintained relational databases in MS-SQL and Oracle PL/SQL to ensure excellent performance and scalability in SharePoint-integrated solutions.
- Used APIs (RESTful, Microsoft Graph API) for data integration, synchronization, and feature upgrades. Delivering customized SharePoint solutions in line with corporate goals, I worked with stakeholders to collect and evaluate needs
- Ensured adherence to company standards by thoroughly testing and troubleshooting SharePoint apps.
- Stayed up to date on SharePoint and Microsoft 365 releases, integrating new features and best practices to improve development processes.

EDUCATION

Addis Ababa University- Addis Ababa, Ethiopia

Bachelor of Science - Computer Science

Sep 2009- Jul 2013

CERTIFICATES

CompTIA Network+ - CompTIA

April 2024- April 2026

Microsoft- Microsoft Certified: Power Platform Fundamentals (PL -900)

Sep 2024 · Sep 2025

SKILLS

SharePoint Development: SPFx, ReactJS, Custom Web Parts, Master Pages, Branding

Power Platform Development: Power Apps (Canvas & Model-Driven), Power Automate (Workflow Automation), Power BI (DAX, Data Modeling, Visualization), PowerPages, Power Automate, Sharegate

Office 365 Integration: SharePoint Online, Microsoft Teams, OneDrive, Power Platform Tools

Cross-Platform Integration: Power Platform with third-party APIs, SQL Server, Azure Services

Agile Methodologies: Scrum, Sprint Planning, Retrospectives

Languages & Tools: JavaScript, TypeScript, HTML/CSS, SQL, Azure DevOps, Git, C#, RESTful APIs, JSON, .NET Core, GraphQL
