PROFILE SUMMARY

Senior ServiceNow Developer / ServiceNow Developer Consultant specializing in designing, developing, and optimizing enterprise ServiceNow solutions across complex environments. Strong expertise in platform architecture, custom development, and automation using Business Rules, Script Includes, Client Scripts, Flow Designer, IntegrationHub, App Engine Studio, and UI technologies. Consistently delivers scalable, high-performance solutions aligned with ServiceNow best practices, governance, and business objectives.

Highly experienced in ITSM and ITOM implementations, including Incident, Problem, Change, Request, Knowledge, Service Catalog, and Virtual Agent. Possesses deep hands-on expertise in Discovery, Service Mapping, and Event Management, enabling accurate service visibility, infrastructure dependency mapping, proactive monitoring, alert correlation, and automated incident generation. Focused on improving operational efficiency, reducing downtime, and increasing service reliability through intelligent automation and integrations.

Demonstrates strong capabilities in CMDB and CSDM governance, data normalization, reconciliation, and lifecycle management. Skilled in delivering IT Asset Management (HAM and SAM Pro), advanced reporting, and Performance Analytics dashboards to support data-driven decision-making. Acts as a trusted technical consultant, leading integrations via REST/SOAP APIs and IntegrationHub, supporting SecOps and GRC/IRM initiatives, mentoring teams, and driving continuous platform optimization and upgrades.

CERTIFICATIONS

- ServiceNow Certified System Administrator (CSA)
- ServiceNow Certified Application Developer (CAD)
- ITIL v4 Certification
- Azure Fundamentals (AZ-900)
- Micro-Certification – Configure the CMDB
- Micro-Certification – Predictive Intelligence
- Micro-Certification – Flow Designer
- Micro-Certification – Now Assist Executive Micro Cert
- Micro-Certification – Performance Analytics

PROFESSIONAL EXPERIENCE

Senior ServiceNow Developer

Brinks – Global Technology & Operations (Enterprise Service Management)

01/2024 – Present

- Serve as a Senior ServiceNow Developer supporting Brink's global Enterprise Service Management (ESM) platform, delivering scalable, secure, and highly available solutions across multiple regions and business units.
- Lead the design, configuration, development, and continuous enhancement of ServiceNow applications aligned with enterprise IT and business service strategies.
- Architect, configure, and optimize core ITSM modules including Incident, Problem, Change, Request, Knowledge, and Service Catalog, ensuring performance, resiliency, and process standardization.
- Configure end-to-end ITSM process flows, including assignment rules, SLA definitions, escalation paths, notifications, templates, and priority matrices.

- Design and enforce UI Policies, UI Actions, Data Policies, and Dictionary Overrides to control form behavior, data integrity, and dynamic user experience.
- Develop complex server-side and client-side logic using Business Rules, Script Includes, Client Scripts, GlideAjax, Scheduled Jobs, and Scripted REST APIs.
- Build and maintain Flow Designer workflows, subflows, and custom actions to automate request fulfillment, approvals, and service delivery processes.
- Implement and support ITOM Discovery, credential management, and MID Server configurations to ensure accurate population of infrastructure and application CIs.
- Lead Service Mapping initiatives, defining business services, application dependencies, and technical service models to improve impact analysis and root-cause resolution.
- Configure and manage Event Management, including event sources, alert rules, correlation logic, noise reduction, and automated incident creation.
- Design and enforce CMDB governance aligned with CSDM, improving CI accuracy, normalization, reconciliation, relationship mapping, and lifecycle management.
- Collaborate with infrastructure, cloud, and application teams to ensure CMDB data accurately reflects real-world environments.
- Implement and enhance IT Asset Management (ITAM) processes, supporting Hardware Asset Management (HAM) and Software Asset Management (SAM) lifecycle automation and compliance.
- Develop advanced Service Catalog items, Record Producers, and Order Guides with complex fulfillment workflows and backend system integrations.
- Build and maintain REST and SOAP integrations using IntegrationHub to connect ServiceNow with monitoring, endpoint management, and enterprise platforms.
- Extend ServiceNow beyond IT through ESM use cases, supporting HR, Facilities, Finance, and other non-IT service domains.
- Design and deploy custom scoped applications using App Engine Studio, adhering to development and upgrade-safe best practices.
- Create intuitive user experiences using UI Builder, Now Experience Framework, UI Pages, UI Macros, and Service Portal customization.
- Implement Virtual Agent, knowledge integration, and self-service experiences to reduce ticket volume and improve user satisfaction.
- Configure core ITSM security settings, including roles, groups, ACLs, impersonation controls, and data access policies.
- Develop advanced reports and Performance Analytics dashboards for SLA tracking, operational metrics, and executive insights.
- Participate in platform upgrades, patching, cloning, and regression testing, ensuring minimal disruption and system stability.
- Conduct code reviews, technical assessments, and performance tuning, identifying inefficient scripts, workflows, and configuration bottlenecks.
- Support Security Operations (SecOps) use cases such as vulnerability response, security incidents, and automated remediation workflows.
- Collaborate with GRC / IRM teams to support risk management, compliance tracking, and policy enforcement where applicable.
- Work closely with global stakeholders, product owners, and architects to gather requirements and deliver scalable technical solutions.
- Provide technical leadership and mentorship to junior developers and administrators, enforcing coding standards and best practices.

- Support Agile and Scrum delivery, participating in sprint planning, backlog refinement, demos, and retrospectives.
- Maintain detailed technical documentation for configurations, integrations, workflows, and operational procedures.
- Act as a trusted technical advisor, recommending platform improvements, optimization strategies, and future-state enhancements.
- Continuously evaluate and adopt new ServiceNow releases, features, and in-demand modules to maximize enterprise value.

ServiceNow Developer Consultant

T-Mobile

02/2023 – 01/2024

- Served as a ServiceNow Developer Consultant supporting T-Mobile's enterprise ServiceNow platform across IT and business service domains.
- Partnered with business stakeholders, product owners, and architects to gather requirements and translate them into scalable, ITIL-aligned ServiceNow solutions.
- Designed, configured, and enhanced core ITSM modules including Incident, Problem, Change, Request, Knowledge, and Service Catalog, supporting high-volume telecom operations.
- Configured ITSM process controls, including assignment rules, priority matrices, impact/urgency models, SLA definitions, escalation workflows, notifications, and templates.
- Designed and enforced UI Policies, Client Scripts, UI Actions, Data Policies, and Dictionary Overrides to control form behavior, mandatory fields, and dynamic user experience.
- Implemented advanced server-side and client-side scripting using Business Rules, Script Includes, Client Scripts, GlideAjax, and Scheduled Jobs.
- Built, tested, and optimized Flow Designer workflows, subflows, and approval chains to automate request fulfillment, incident resolution, and operational processes.
- Developed complex Service Catalog items, Record Producers, and Order Guides with dynamic variables, conditional logic, and backend fulfillment integrations.
- Supported ITOM Discovery, including MID Server configuration, credential management, and schedules, to populate accurate CI data across network, server, and application layers.
- Assisted with Service Mapping initiatives, modeling telecom application services, network dependencies, and service relationships for improved impact analysis.
- Configured and enhanced Event Management, enabling alert ingestion from monitoring tools, correlation rules, noise reduction, and automated incident creation.
- Contributed to CMDB governance aligned with CSDM, improving CI normalization, reconciliation, relationship mapping, and data quality controls.
- Collaborated with network, cloud, and operations teams to ensure CMDB data accurately reflected real-time infrastructure changes.
- Developed and maintained REST and SOAP integrations using IntegrationHub to connect ServiceNow with monitoring, provisioning, and telecom systems.
- Supported IT Asset Management (ITAM) processes, including asset lifecycle tracking, inventory accuracy, and CI-to-asset alignment.
- Built custom scoped applications to support telecom-specific workflows and operational use cases.
- Enhanced user experience through UI Builder, UI Pages, UI Macros, and Service Portal using Now Experience Framework standards.
- Implemented role-based access controls (RBAC), ACLs, and data policies to meet enterprise security and compliance requirements.
- Created advanced operational reports and Performance Analytics dashboards for SLA tracking, incident trends, and executive visibility.
- Participated in platform upgrades, patching, and cloning, performing impact analysis, regression testing, and post-upgrade validation.

- Conducted code reviews, performance tuning, and technical troubleshooting to ensure maintainability and platform stability.
- Supported Agile/Scrum delivery, contributing to sprint planning, backlog refinement, demos, and release management.
- Provided production support, resolving defects, performance issues, workflow failures, and integration incidents.
- Documented technical designs, configurations, workflows, and integrations for knowledge sharing and long-term support.
- Acted as a trusted ServiceNow advisor, guiding stakeholders on platform capabilities, limitations, and optimization opportunities.
- Collaborated with cross-functional teams to deliver solutions aligned with T-Mobile's digital transformation initiatives.
- Maintained awareness of new ServiceNow releases and ITSM enhancements, recommending improvements to maximize platform value.

Tech Operations Professional

PwC

01/2020 – 12/2022

- Supported large-scale technology operations initiatives across multiple client engagements, ensuring stable, secure, and high-performing IT service environments.
- Acted as a key contributor to ServiceNow-based operational solutions, supporting ITSM processes including Incident, Problem, Change, Request, and Knowledge Management.
- Collaborated with client stakeholders, service owners, and technical teams to analyze operational challenges and implement process improvements.
- Provided hands-on support for incident and problem resolution, performing root cause analysis and driving corrective and preventive actions.
- Assisted in the configuration and enhancement of ServiceNow workflows, business rules, and automation to improve service efficiency.
- Supported CMDB operations, including CI data validation, normalization, reconciliation, and relationship maintenance.
- Contributed to IT Operations Management (ITOM) activities by supporting Discovery, monitoring integrations, and service visibility initiatives.
- Participated in service mapping efforts, helping define application and infrastructure dependencies for improved operational insight.
- Assisted in change and release management processes, ensuring controlled deployment of technology changes across client environments.
- Supported IT Asset Management (ITAM) activities, including asset lifecycle tracking, inventory accuracy, and compliance reporting.
- Developed and maintained operational reports and dashboards to track KPIs, SLAs, and service performance metrics.
- Worked closely with infrastructure, application, and security teams to ensure operational alignment with business requirements.
- Provided production support for ServiceNow and related operational tools, resolving defects and performance issues.
- Supported system integrations between ServiceNow and third-party platforms, ensuring reliable data exchange and process continuity.
- Assisted with platform upgrades, patches, and enhancements, performing testing and validation activities.
- Documented operational processes, technical configurations, and support procedures to support knowledge transfer.
- Participated in risk, compliance, and audit support activities, ensuring adherence to internal controls and client governance requirements.
- Supported Agile delivery and continuous improvement initiatives, contributing to backlog refinement and sprint activities.

- Engaged in client-facing activities, providing operational insights and recommendations for technology optimization.
- Maintained awareness of evolving technology operations best practices and emerging ServiceNow capabilities to support client innovation.

EDUCATION

Master of Science (MSc) in International Business

University of South Wales — United Kingdom

Bachelor of Science (BSc) in Economics

Madonna University — Nigeria

CORE COMPETENCIES

Advanced Automation Rules & Enterprise Business Logic Design || Role-Based Access Control (RBAC), User Provisioning & Group Management || Plugin Activation, Feature Enablement & Formatter Configuration || Custom Workflow Architecture, Process Automation & Flow Designer Orchestration || Advanced Reporting, Performance Analytics & Executive Dashboards (ServiceNow, Excel & Power BI) || Security Permissions, Data Policies & Access Control Lists (ACLs) || Enterprise Data Integration & Migration – Import Sets, Transform Maps, Data Sources & Update Sets || End-to-End Project Delivery, Technical Leadership & Execution Management || Operational Metrics, KPI Definition & SLA Performance Tracking || Form Configuration, UX Optimization & UI/UX Design Best Practices || Enterprise-Level Troubleshooting, Root Cause Analysis & Problem Resolution || Custom & Scoped Application Development using App Engine Studio || IT Operations Monitoring – Discovery, Event Management, Alert Correlation & Service Mapping || Strategic Service Portfolio Planning & Enterprise Service Management (ESM) || IT Asset Lifecycle Management – Hardware Asset Management (HAM) & Software Asset Management (SAM Pro) || CMDB Architecture, Data Governance & CSDM Alignment || ITIL-Aligned Service Delivery (ITIL v3 & v4) || Core ITSM Capabilities – Incident, Problem, Change, Request & Knowledge Management || Service Catalog & Request Fulfillment Design – Record Producers, Order Guides & Advanced Catalog Workflows || Enterprise Integrations with Third-Party Systems (AWS, Jira, SCCM, Monitoring & Telecom Platforms) || Advanced Scripting & Development – JavaScript, Glide APIs, HTML, CSS, SQL & Python || Automated Notifications, Event-Driven Communications & Email Configuration || Service Level Management – SLAs, OLAs & Underpinning Contracts (UCs) || Real-Time Operational & Performance Analytics Reporting || Flow Designer Custom Automation & IntegrationHub Solutions || Tailored Enterprise Applications & Scalable Scoped Solutions || Service Portal & Self-Service Experience Customization || Software Development Lifecycle (SDLC) Expertise with Agile & Scrum Delivery Models || UI Management – UI Actions, UI Policies, Client Controls & Data Governance
