EDUCATION

Master of Professionals Studies in Health Information Technology (MPS) GPA 3.87/4 May 2024
[University of Maryland, Baltimore County](#)

Bachelor of Science in Botany, Zoology and Chemistry (BSc) GPA 6.9/10 August 2021
[Jagarlamudi Kuppuswamy Choudary College, Guntur](#)

TECHNICAL SKILLS

- Electronic Health Records (EHR) Systems: Understanding of EHR implementation and optimization.
- Data Analysis and Management Tools: SQL, Python.
- Collaborated within a team to utilize SQL for advanced data integration and database management, enhancing data accuracy and operational efficiency.
- Health Informatics: Familiarity with health information exchange (HIE) protocols and standards.
- Communication Skills: Strong written and verbal communication skills for interacting with healthcare professionals and IT teams.
- Stakeholder Management, Time Management, Attention to detail, Critical thinking, Team management, Negotiation.
- Proficient in C# programming, including fundamentals of object-oriented programming, gained through completion of the Microsoft C# Fundamentals course by freeCodeCamp.

PROFESSIONAL EXPERIENCE

Today's Dental Associates

[Clinical Data Analyst](#)

Pikesville, MD

Sept 2023 – Present

- Managed and validated patient and treatment data using EHR systems (Dentrix and Open Dental), ensuring data accuracy, completeness, and HIPAA compliance for clinical reporting and audits.
- Designed and generated customised reports to support clinical decision-making, performance evaluation, and insurance billing processes.
- Streamlined patient check-in by aligning digital intake forms with Dentrix data fields, reducing manual data entry and front-desk workload.
- Utilised SQL to securely query, verify, and manage patient medical histories and documentation, supporting accurate appointment scheduling and maintaining data integrity and privacy compliance.
- Automated aging report generation using SQL scripts to identify overdue and denied insurance claims, improving revenue cycle follow-ups and operational efficiency.
- Migrated physical patient charts to Dentrix electronic records and standardised medical histories, treatment notes, and referral documentation to improve record consistency and audit readiness.
- Tested and supported the transition from paper-based referrals to electronic referrals, reducing referral turnaround time and increasing patient revenue flow by 15%.
- Collaborated with dental providers, specialists, administrative staff, and technical teams to streamline workflows, reduce errors, and ensure efficient patient coordination and check-ins.

- Assisted in building and testing data ingestion pipelines using **Microsoft Fabric** to automate data loading from SQL databases and flat files into a centralized analytics layer.
- Performed basic data transformations and validations within pipelines, including data type standardization, filtering invalid records, and verifying row counts.
- Loaded processed data into **Fabric Lakehouse/Warehouse** to support downstream SQL queries and reporting needs.
- Supported reporting teams by ensuring timely data refreshes and validating pipeline outputs against source systems.
- Monitored pipeline executions, identified failures, and assisted in troubleshooting data or configuration issues.
- Documented pipeline logic, data sources, and refresh schedules to improve maintainability and knowledge sharing.

Jagarlamudi Kuppuswamy Choudary College

Project Leader

Guntur

December 2020 – May 2021

- Served as Team Lead for my final semester project on the biological and biochemical study of cultured organisms, focusing on aquatic species. I guided my teammates throughout the project to ensure its successful completion.
- Collected and recorded data on internal and external measurements of aquatic species, ensuring accuracy and consistency in data entry.
- Performed data entry tasks to document collected measurements into college records, maintaining data integrity and obtaining approval from the department head.

ACADEMIC PROJECTS

- **Artificial Intelligence and Machine Learning in Healthcare: Transforming the Practice of Medicine (AI & ML):**

The project is focused on Machine Learning and Artificial Intelligence technologies; the healthcare industry is seeing a substantial revolution. AI technologies improve the accuracy of diagnoses, forecast patient outcomes, and customize treatment strategies. The included applications include Diagnostics, Predictive Analytics, Personalized Medicine, and Operational Efficiency. By incorporating AI ML into healthcare, medical staff can provide more accurate, efficient, and customized care, leading to better patient outcomes and streamlined operational processes.

- **Introduction to Database and Data Analytics:**

In this project, a course registration database was designed and analyzed as part of academic coursework to apply database and data analytics concepts in a real-world setting. The work focused on structuring student, course, and enrollment data using normalized relational schemas to ensure data integrity and consistency. Advanced SQL queries were developed to evaluate performance metrics, analyze enrollment patterns, and derive meaningful insights to support data-driven decision-making. The objective of the project was to strengthen practical skills in relational database design and data analysis while demonstrating how structured data can be effectively used to extract actionable insights.

- **Implementation Strategy Report for Mobile Health Technologies to Manage Early Signs of Pulmonary Diseases (mHealth):**

In this project we created a detailed implementation plan report that specifically addresses the use of mobile health (mHealth) technology for monitoring and treating early symptoms of lung diseases. Our analysis highlights the areas where there are deficiencies in detecting and managing pulmonary diseases early on, while emphasizing the promise of mHealth solutions. The objective of this strategy report is to improve the early identification, monitoring, and management of pulmonary disorders by utilizing novel mobile health technology, with the goal of enhancing patient outcomes.

- **Adverse Events in Healthcare:**

This project mainly based on skilled in overseeing and documenting adverse occurrences in healthcare environments to enhance patient safety and optimize clinical results, we have identified many primary duties performed by healthcare workers. Python was extensively used for data analysis, leveraging libraries such as Pandas and NumPy for data manipulation, include the identification and reporting of incidents, data analysis, and effective communication. This experience highlights a firm dedication to ensuring patient safety and providing high-quality care by effectively managing adverse events with great attention to detail.

CERTIFICATIONS

- Completed python training program being conducted by DataFlair Web Servies – DataFlair.
- Completed Fundamental C# with Microsoft by freeCodeCamp -
