EDUCATION

- Harrisburg University of Science and Technology, Harrisburg, PA**
MS in Computer Science – Software Engineering and Software Testing (Computer Engineering)

Certifications

- AWS Academy Generative AI - AWS** October 2025 – Present

SKILLS

- Languages:** Java, Python, Flask, Python, HTML5, CSS, JSON, AJAX, JavaScript (JS) **Databases:** PostgreSQL, MySQL, Oracle, MongoDB, Redis
- Frameworks & Technologies:** J2EE, JSP, Servlets, Spring Boot, Spring Cloud, Spring AI, Hibernate, JDBC, REST APIs, SOAP, Web Services, Algorithms, Data Structures, Object-oriented Programming, Spring, Web Flux, Core Java, Python, Shell Scripting, SQL, Apache Kafka Event-Driven Systems, API Design, Cloud-Native Architecture **Cloud:** AWS (Lambda, EC2, SageMaker, S3), Azure (App Services), GCP (VMs, IAM), **Kubernetes & Containers:** Docker, Kubernetes, Helm (deployments, scaling, health checks) **CI/CD:** Jenkins, GitLab CI, GitHub Actions, Apache Airflow, Harness CI/CD, Terraform **Monitoring:** CloudWatch, ELK, Prometheus, Grafana, **Testing:** Unit/Integration Testing, Automated Test Suites, **Tools:** Git, Jira, Confluence, Linux Shell, Postman API, Open API(Swagger), VS Code, GitHub Copilot, Pythagoras, IntelliJ IDEA, Subversion (SVN), Git, JUnit, Maven, Jira **AI/ML & Tools:** Generative AI, LLM APIs, AWS SageMaker, AWS AI Cloud, Hugging Face, OpenAI APIs, GitHub Copilot, AI Code Generators, **Soft Skills:** Leadership, Collaboration, Mentoring, Problem Solving, Communication

PROJECTS

- Generative AI-Powered Customer Insights Platform - [GitHub](#)** Aug 2025 – Oct 2025
 - Developed Java microservices using **Spring Boot + Spring AI** to call LLM models for text generation and summarization. Integrated **AWS SageMaker endpoints** for fine-tuned Transformer models, Created REST APIs for analysis, report generation, and real-time recommendation delivery with **MongoDB** for storing embeddings and AI results, Improved delivery efficiency by ~25% with GitHub Copilot for code scaffolding.
- Smart Medi Assist AI – Gen AI Health Report Summarizer, Patient Query & Insurance Assistant - [GitHub](#)** Jul 2025 – Oct 2025
 - Designed and implemented a Voice/text-enabled Generative AI Assistant that simplifies user experience with automatically summarizing medical documents like lab reports and prescriptions with enabling users to query about their reports and health conditions.

PROFESSIONAL SUMMARY

- Developed backend modules with Python reducing computation times by **22%**. Integrated cloud services via REST APIs increasing system interoperability by **30%**. Wrote SQL queries and optimized document database operations improving query performance by **40%**.
- Worked as Senior Java Developer with **great experience** in designing, developing, and deploying large-scale, enterprise-grade applications using **Java, Spring Boot, and microservices**, with advanced expertise in **Generative AI integration, AWS SageMaker, Spring AI, and GitHub Copilot-powered development tools workflows**. Proven track record of architecture secure, scalable, and high-performing distributed systems while collaborating with data scientists and AI engineers to embed ML/LLM models into production applications. Experienced mentor skilled in code reviews, best practices, and team enablement. Strong background in **PostgreSQL, MongoDB, CI/CD**, and cross-functional Agile delivery including SQL, and experience working with relational databases.
- Ambitious about Stay up to date with latest technologies, Implement Emerging Technologies and performance tuning. Familiar with deployments validation services using **AWS ECS, Lambda, SQS, SNS, Glue, Aurora**.
- Hands-on experience with cloud platforms (AWS, GCP, or Azure) and their services Lambda, Kinesis, ECS, Bedrock AI Integration. Good Understanding on GenAI tools like AWS Bedrock, Cursor AI, Windsurf. Also having ability Stay up to date, Adapt with latest industry trends and understanding Machine Learning tools like Pytorch, Tensorflow and Implement New Technologies and improve performance.

EXPERIENCE

- Student Developer - Internship, Center for Innovation and Entrepreneurship by Harrisburg University** Oct 2025 - Present
 - Responsible for assisting in design, implementation, testing, and documentation of software projects incubating at the CIE. Working on implementation of software design documentation and source code with Stakeholder Management for Clean Product Procedures. Supporting deployments with Spring using Apache Tomcat to host the webapp, MySQL for the database, Hibernate OGM in Java, **AWS ECS and Lambda, GCP, Kubernetes, and Docker** while automating CI/CD pipelines with **Jenkins**.
- Senior Software Engineer, Mercedes-Benz Research and Development India, Bangalore, India** May 2022 - Apr 2023
 - Designed & maintained cloud-integrated software solutions, increasing system reliability by **30%**. Integrated AWS APIs to enhance service automation, reducing manual workflows by **40%**. Debugged distributed services, resolving defects with **95% first-time fix accuracy**.
 - Collaborated with product, ops, and engineering teams to deliver scalable cloud features with **on-time sprint delivery rate of 98%**.
 - Created documentation, API specs, and automated test plans improving onboarding efficiency by **25%**. Improved CI/CD pipelines (Jenkins/GitLab) cutting deployment time by **50%**. Strong Proficiency in building systems with **high uptime, operational resilience using resilience4j** **Strong analytical thinking and problem-solving capabilities**.
- Senior Systems Engineer, Tata Consultancy Services, Bangalore, India** Dec 2020 – Apr 2022
 - Implemented Analytical Approach in problem solving and Developed Multi Programming projects with strong Leadership and Mentoring fellow people in Healthcare Project. Skilled in ensuring Code Quality through tools like SonarQube, Shazam Labs, JUnit Testing, IUT, Swagger for Api Documentation OpenAPI Swagger and Postman. Developed automation scripts using **Python, Shell Scripting** on linux systems.

- Developed scalable backend services using Spring Boot, Java, and Spring JPA for health insurance automation.
- Junior Java Developer with hands-on experience in Java/J2EE application development, testing, debugging, and deployment within enterprise environments. Skilled in gathering requirements, troubleshooting and optimizing application performance, preparing technical specifications, and supporting integration services using middleware and relational databases. Strong understanding of Agile methodologies, SDLC processes, and web technologies including JSP, Servlets, JavaScript, AJAX, JSON, and CSS. ensured seamless integration with front-end components.

Java Developer, Solix Technologies, Hyderabad, India

Nov 2017 – Nov 2020

- Built a Full Stack Development **Spring Framework Application with PostgreSQL** (backend) and transformed Monolithic legacy application to Microservices RESTful APIs with business Requirement Gathering and focus on designing, Configurations and Logging Restful Web Applications Architecture Models and utilizing building tools such as Maven/Kotlin for Financial Domain Payment Systems. Deployed applications on **Microsoft and IBM WebSphere application servers**, improving performance and stability.
