EDUCATION

University of Massachusetts Lowell

Jul 2020 - May 2024

Bachelors in Computer Science

3.46/4.00 CGPA

Course Projects: Machine Learning (PyTorch, TensorFlow), Operating Systems, Computer Architecture, Data Science.

TECHNICAL SKILLS

Languages	OCaml, C/C++, Java, Python, C#
Web Development tools	HTML, CSS, JavaScript, React
Software Development	Object-Oriented Programming, Functional Programming, Agile Methodologies
Clouds & Database	AWS, MySQL, MongoDB
Frameworks and Tools	Visual Studio Code, IntelliJ IDEA, Xcode Git, Cmake, MS Office

WORK EXPERIENCE

University of Massachusetts Lowell

Sep 2023 - May 2024

Computer Science OPL(OCaml) Grader

Lowell, MA

- Collaborated with professors to ensure high-quality grading for Organisation of Programming Languages. Configuring and debugging an autograder system for evaluating student code submissions, and developed a comprehensive suite for automated testing.
- Automated the evaluation process, leading to efficient grading of student assignments and projects. The autograder automatically tested student code against complex scenarios and assigned grades based on the outcomes.
- Assessed and graded the assignments and projects of over 90 students, providing detailed and constructive feedback aimed at enhancing their proficiency in OCaml and overall programming skills.
- Gained knowledge in functional programming paradigms, OCaml, and Haskell. This role also significantly honed my skills in teamwork and analytical skills, strong verbal and written communication skills.

AirDrive Smart Solutions Pvt Ltd

Feb 2022 - Apr 2023

Android Developer Intern

Hyderabad, IN

- Engaged in building high-performance applications using Android Studio with Kotlin, Jetpack Compose and involved in the UI/UX design via **Figma** for a fuel capacity tracking device for trucks, demonstrating my commitment to delivering high-quality solutions and my passion for software engineering and development.
- Collaborated cross-functionally to design and deploy software optimizing fuel usage and operational efficiency for trucking fleets. Conducted detailed system analysis to identify and resolve operational concerns comprehensively.
- Ensured backend reliability with JUnit tests, REST API's, Retrofit for connections, MVVM, microservices, SpringBoot. Followed Agile development methodologies, contributing to daily stand-ups and retrospectives. Applied linear programming, algorithms and data structures for optimizing fuel consumption and route planning.
- This role had strengthened my problem solving skills, hibernate, Web Services and ability to work effectively in a collaborative environment, preparing me for advanced roles in software engineering and Development.

PROJECTS

Link to my Portfolio containing C++ projects: [Portfolio \(C++\)](#)

Database Capstone Project: Used MySQL and python connectivity to design and develop the capstone project for the certification offered by Meta. Developed a database for Restaurant named "Little Lemon" using relational databases (SQL). This project also maintain the analysis of sales in Little Lemon restaurant by using tableau.

Sokoban Game: Designed Sokoban game using SFML library of C++. This game initially consisted of 5 levels, later added 10 more levels to it increasing the complexity of the game. This game also contained features like Undo move and reset. Unit tested all the functions using BOOST Framework.

CERTIFICATIONS

Oracle Certified Java Programmer (Oracle)

AWS Certified Developer - Associate ([Badge](#)) : AWS services, ECS, DynamoDB.

Meta Database Professional ([Certificate](#)) : Python, MySQL, MySQL-Python Connectivity, version control.

Java MasterClass (Udemy) : Core Java, Lambda Functions, DSA, Multithreading, JDBC, Unit Testing.
