SUMMARY

Data Engineer with 4 years of expertise in architecting scalable data pipelines and modeling solutions using Microsoft Azure and Fabric. Executed complex transformations with Azure Data Factory, Synapse, Databricks, and Spark to support analytics and machine learning workflows. Developed Python scripts for automation, validation, and data cleansing. Translated business requirements into normalized data models, enhancing Power BI reporting capabilities. Improved dashboard load times by 45% through targeted performance tuning. Documented pipeline logic, architecture, and access controls to ensure system reliability and compliance.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, Scala(Basic)
- **Cloud Platforms:** Microsoft Azure, GCP, AWS
- **Big Data Technologies:** Hadoop, Apache Spark
- **Data Engineering Tools:** Microsoft Fabric, Azure Data Factory, Azure Synapse, Databricks
- **Data Visualization Tools:** Tableau, Power BI
- **DevOps & CI/CD:** Jenkins, Git, Docker, Kubernetes, Terraform(Learning)
- **Database Management:** MySQL, SQL Server
- **Web Development:** HTML, CSS
- **Operating Systems:** Linux, Windows
- **Development Environments:** Jupyter Notebooks, Visual Studio Code
- **Methodologies:** Agile
- Machine Learning

PROFESSIONAL EXPERIENCE

Quadrant Technologies

August 2024 – Present

[Data Engineer](#)

Tech Stack: Azure Data Factory, Azure Event Hubs, Azure Synapse Analytics, Microsoft Fabric, Python, SQL, Power BI, Great Expectations, Azure Monitor, Azure Active Directory, Git

- Developed ETL/ELT pipelines using Azure Data Factory and Event Hubs to automate ingestion, transformation, and delivery of enterprise scale datasets.
- Improved Azure Synapse performance and Power BI efficiency, decreasing dashboard load times by 45% and enhancing data accessibility for end users.
- Automated data transformation routines with Python to standardize cleansing, enrichment, and normalization workflows across many environments.
- Delivered business aligned semantic models by partnering with Finance and Product teams, leading to a 30% gain in report generation speed and stakeholder satisfaction.
- Implemented real time monitoring using Azure Monitor and custom log metrics to reduce latency and ensure pipeline continuity.
- Streamlined ingestion from Azure Event Hubs into structured warehouse layers, increasing processing throughput by 25% and enabling faster analytical queries.
- Prepared high quality datasets for machine learning models and leveraged Git to expedite schema validation and test automation.
- Documented architecture, data models, and pipeline logic, reducing onboarding effort by 40% and supporting compliance with internal audit standards.

Capgemini Private Limited

October 2019 – May 2022

[Data Engineer](#)

Client: Royal Bank of Canada

Tech Stack: Python, SQL, Apache Airflow, Spark, Azure Data Factory, Azure Synapse Analytics, Azure Databricks, Microsoft Azure, Git, Power BI, Linux.

- Architected scalable ETL/ELT workflows using Azure Data Factory and Apache Airflow to extract, transform, and consolidate large financial datasets.
- Accelerated data processing performance by 30% through the refinement of Fabric Runtime jobs and Databricks notebook executions for regulatory reporting.
- Scripted advanced Python routines to automate data profiling, transformation, and integrity checks across structured and semi structured sources.

- Delivered high impact Power BI dashboards and normalized data models, reducing time to insight by 25% for finance and risk teams.
- Integrated Microsoft Azure security features to enforce access controls and support compliance with enterprise governance standards.
- Restructured batch processing pipelines into event driven workflows, lowering manual intervention by 40% and improving system reliability.
- Mitigated critical failures across Spark clusters and orchestrators by executing root cause analyses and recovery strategies within production environments.
- Documented end to end data flows, Spark configurations, and architecture artifacts, cutting onboarding duration for new engineers by 20%.

EDUCATION

Master of Science in Computer Science
[State University of New York, New Paltz](#)
Bachelor's in Computer Science

August 2022 – December 2023
June 2015 - May 2019

CERTIFICATIONS

- Achieved Java SE8 certification – Oracle.
- Earned Azure Databricks & Spark for Data Engineers: Hands on Project.
- Acquired the Microsoft Certified Fabric Data Engineer Associate Certification.
- Attained Microsoft Certified: Fabric Data Engineer Associate.
