

Summary:

- 4+ years of experience as a **Java Full Stack Developer** with expertise in **various technologies** throughout the **development lifecycle**, including **Java, Spring Framework, front-end technologies** like **React, Angular**.
- Expert in crafting **web solutions** using tech stack including **Java, JavaScript frameworks (React.js), backend frameworks (Spring Boot, Spring MVC)**, and **DevOps** tools to **cater to unique** client requirements.
- Proficient in various spring modules like **Spring Boot, Spring ORM, Spring JPA**, and **Spring Integration**, **facilitating rapid development** and **integration** of enterprise applications.
- Leveraging **AWS EKS** to deploy and manage containerized applications using **Docker** and **Kubernetes**, demonstrating expertise in **containerization technologies** and **cloud-based orchestration**.

Skills:

- **Methodologies & Languages:** Java, C++, Python, SDLC, Agile/Scrum, , JavaScript, SQL, Typescript, Waterfall, TDD
- **Frameworks/Libraries:** Spring REST, Spring Cloud, Spring Security, Spring Data JPA, Spring Boot, Spring MVC, REST API, React.js, Node.JS, Express.JS, Next.JS, Angular.js, Django, Hibernate, OAuth 2.0
- **Web Technologies:** HTML5, CSS3, Bootstrap5, jQuery, Ajax, JSON, XML, Redux, UI Frameworks
- **Cloud:** AWS (EC2, SQS, SNS, Code Deploy, CloudWatch, API Gateway)
- **Testing & Tools:** Git, GitHub, GraphQL, Maven, Jenkins, Docker, Kubernetes, Grafana, Ansible, RabbitMQ, Kafka, Postman, Jira, Junit, React Testing Libraries, Mockito
- **Database:** MySQL, PostgreSQL, MongoDB, Neo4j, Firebase, Cassandra, Oracle, OpenEdge

Education:

- Master's in Computer Science from southern university and A & M college- Baton Rouge, LA

Professional Experience

PNC Financial Services | Java Full-Stack Developer | Dec 2024 – Current

- Designed and implemented secure **RESTful APIs & Microservices** using **Spring Boot & React.JS** to streamline **financial transactions** and **ensure compliance** with regulatory standards, optimizing backend throughput using **JPA** and **native SQL queries**.
- Managed and tuned **MySQL** and **Amazon DynamoDB** databases to ensure **high availability** and **data integrity** across real time **financial operations**; employed **Liquibase** for seamless schema **versioning** and **migration**, reducing deployment risks in **sensitive financial systems**.
- Automated backend workflows involving reconciliation, ledger updates, and transactional audits using **Java I/O, JDBC**, and **multithreading**, reducing **manual financial processing time by 25%** and improving operational efficiency.
- Developed robust unit and integration test suites using **JUnit** and **Mockito**, **integrated** into **Jenkins/GitHub Actions CI/CD pipelines**, resulting in a **30%** drop in post-release defects and faster, reliable financial feature rollouts.
- Deployed scalable and compliant **cloud-native financial** services on **AWS (EC2, S3, Lambda, API Gateway)**, accelerating go-to market delivery **by 40%** through **infrastructure-as-code** automation with **AWS Code Pipeline**.

Zensar Technologies | Java Full Stack Developer | Jun 2021 – Jul 2023

- Designed and developed scalable **Microservices** using **Java Spring Boot** for **backend operations** while creating dynamic, interactive user interfaces with **Angular**, ensuring a **modular** and **maintainable full-stack architecture**.
- Collaborated closely with **designers** to implement a visually **appealing** and **responsive** user experience by leveraging **Angular's data binding** and **component communication techniques**.
- **Automated backend API testing** through comprehensive **unit** and **integration tests** using **JUnit**, enhancing product reliability and reducing testing redundancy **by 40%**.
- Deployed and managed containerized applications on **AWS EKS**, achieving a **20%** reduction in deployment times and optimizing resource utilization with effective scaling policies.
- Consistently delivered strong project outcomes, with **70%** contribution from **Backend API Development** and **30%** from **Frontend development**, **aligning with key performance metrics**.

Fusion Software Technologies | Java Full Stack Developer | Aug 2019 – May 2021

- Industrialized **backend services** using **Java 11 features**, leveraging **Spring Boot** and **Spring MVC frameworks** to **integrate UI** components with **backend systems**, ensuring seamless and scalable user experiences.
- **Improved code reusability by 40%** by implementing **Angular's modular approach** through services and components, promoting easier **maintenance** and **faster development cycles**.
- Applied a **GraphQL API server** using the **graphql-http library** to optimize **data retrieval** from **MongoDB**, significantly enhancing client-server **data transfer efficiency**.
- Enhanced code maintainability and testability by mocking dependencies with **Mockito across Java services**, resulting in a **40%** reduction in **integration testing** time.
- Developed and automated **CI/CD pipelines** using **AWS CodePipeline** and **CodeDeploy**, increasing deployment frequency **by 40%** and reducing lead time for production releases.
