Mobile: +12407534116

Healthcare Data Analyst & EHR Application Analyst

PROFESSIONAL SUMMARY:

- Over 4 years of experience in data analysis within healthcare settings, including Medicaid data, demonstrating strong proficiency in SQL and SAS for data manipulation and analysis tasks.
- Adept in Python for data analysis and automation, supporting data-driven initiatives; possess excellent communication skills to present complex data to non-technical audiences effectively.
- Experienced in building dashboards and reports using Power BI for data visualization, contributing to improved understanding of healthcare data and trends for informed decision-making.
- Leveraged SQL to extract and analyze data, supporting risk stratification and population health initiatives through statistical modeling, demonstrating a strong understanding of healthcare data.
- Familiar with cloud-based data platforms like Azure and AWS, ensuring semantic interoperability and standardization of clinical terminologies across data systems for improved outcomes.
- Built EMR-integrated dashboards tracking KPIs, enhancing data-driven care delivery and physician performance monitoring, with a focus on Medicaid managed care and program evaluation.
- Conducted internal audits and led QA initiatives, developing audit-ready pipelines aligned with healthcare quality standards, demonstrating experience with state or federal healthcare programs.
- Extracted and analyzed data from EMRs, claims, and registries, leveraging SQL and SAS to support improved diagnostics and patient outcomes within the Medicaid framework.
- Facilitated value-based care by collaborating with clinical and IT teams on EHR customization and SQL-based workflows, contributing to digital health innovation and improved efficiency.
- Completed training in data management and contributed to digital health innovation through cloud-based infrastructure deployment, demonstrating a commitment to continuous learning and improvement.

TECHNICAL SKILLS:

- **Healthcare & Clinical Systems** - EpicCare, Epic Willow, EMR/EHR, HL7, ICD-10, SNOMED CT, RxNorm, UMLS, DICOM, HIPAA Compliance, GCP, Pharmacovigilance
- **Programming & Analytics** - Python, SQL, R, MATLAB, XML, SAS, STATA, NumPy, Pandas, PySpark
- **Business Intelligence & Visualization** - Power BI, Tableau, Excel (Advanced), SSRS, KPI Dashboards, Healthcare Metrics Reporting
- **ETL & Data Engineering** - SQL-based ETL, Data Integration, Data Modeling, Structured Query Development, Workflow Optimization
- **Data Standards & Interoperability** - HL7 Messaging, ICD-10 Coding, SNOMED CT Mapping, RxNorm Drug Standards, LOINC (if needed for lab data)
- **Clinical Operations & Documentation** - Clinical Decision Support, Adverse Event Reporting, Quality Improvement, SOP Development, Chart Audits, Training & Support
- **Cloud Computing** - Azure, AWS
- **Others** - Claims-based data

PROFESSIONAL EXPERIENCE:

UnitedHealth Group

Sep 2024 – Present

Healthcare Data Analyst

Responsibilities:

- Engineered and maintained Azure-based ETL pipelines using Azure Data Factory and Synapse Analytics to transform EHR and claims data for enterprise reporting and regulatory compliance needs. This supported care network performance analysis.
- Spearheaded strategic analytics initiatives for digital health innovation, leveraging Power BI and Python to derive insights into patient retention, care quality metrics, and provider performance across regions.

- Developed interactive KPI dashboards in Power BI to track chronic disease progression trends, enabling care management teams to initiate timely interventions and improve population health outcomes.
- Utilized HL7 messaging formats to process encounter data and structured observations, integrating them into enterprise data warehouses with SNOMED CT and ICD-10 coding for standardization.
- Automated CMS and NCQA quality reporting with SQL-based validation rules, reducing reporting errors, enhancing audit readiness, and supporting internal quality improvement efforts.
- Built predictive models in Python and R for patient risk stratification, leveraging Azure-hosted datasets to forecast readmission risks and optimize resource allocation strategies.
- Supported pharmacy analytics initiatives by linking RxNorm-coded prescriptions with treatment outcomes, informing clinical decisions and tracking medication adherence and effectiveness using SQL.
- Created scalable data governance processes including metadata tagging and validation frameworks to improve data quality, integrity, and trust in clinical and operational reporting using SAS.
- Acted as a clinical-technical liaison, translating analytic insights into workflow enhancements while mentoring junior analysts in EMR data handling, coding standards, and de-identification best practices.
- Implemented data analysis and automation tasks using Python, enhancing the efficiency of data processing and reporting workflows, and ensuring data accuracy for critical decision-making processes.

Caregivers Home Health Services Inc.

Aug 2023 – May 2024

Healthcare Data Analyst

Responsibilities:

- Extracted and analyzed EHR data to identify documentation inefficiencies in home health workflows, supporting improvements in care delivery, care plan accuracy, and patient progress note accessibility.
- Designed interactive Power BI dashboards to visualize caregiver assignments, patient satisfaction, treatment adherence, and outcome trends, enhancing visibility for nursing and operations teams.
- Used SQL queries and Excel-based reports to identify anomalies in clinical documentation, vital signs, and billing data, enabling early detection of errors and improving Medicare audit readiness.
- Mapped diagnosis and procedure data to ICD-10 and SNOMED CT standards, and integrated RxNorm-coded pharmacy claims to enhance clinical reporting and treatment adherence monitoring.
- Collaborated with operations and case managers to optimize patient intake and discharge workflows using process mapping tools and structured documentation templates, improving efficiency.
- Participated in quality and strategy review sessions with clinical leadership, providing data-driven recommendations based on treatment outcomes, re-hospitalization rates, and emergency room visit patterns.
- Supported Medicare and billing compliance by preparing audit-ready extracts, validating structured data from EMRs, and ensuring PHI access was appropriately logged and secured.
- Facilitated transition to cloud-based EMR reporting systems by contributing to IT-led requirements sessions, testing data migration workflows, and ensuring accuracy post-migration.
- Conducted staff training on documentation standards and note entry best practices, contributing to greater consistency and reduced caregiver variability in clinical records, improving data quality.
- Utilized SQL and SAS for data manipulation and analysis, ensuring data integrity and accuracy for reporting and compliance purposes, and supporting data-driven decision-making processes.

Gleneagles Global Hospitals

Jan 2020 – Jul 2022

EHR Application Analyst

Responsibilities:

- Customized EpicCare modules to streamline clinical workflows, focusing on medication administration, discharge summaries, and order sets to enhance usability and reduce documentation time for physicians and nurses.
- Led EHR implementation training for clinical staff, conducted follow-up evaluations, and developed SOPs and workflow diagrams to support consistent documentation practices across departments.
- Maintained and validated HL7 interfaces for radiology, pharmacy, and lab systems, ensuring seamless and timely data exchange between diagnostic and treatment platforms.

- Developed and refined EHR templates using SNOMED CT and LOINC standards, improving structured data capture and enabling higher-quality clinical reporting and analytics.
- Conducted impact analyses for EHR system changes, communicated findings to governance committees, and supported change management through well-documented release cycles and user awareness initiatives.
- Partnered with clinical stakeholders and pharmacy informatics teams to configure user-friendly interfaces, drug interaction alerts, and default dosage settings aligned with clinical best practices.
- Supported Meaningful Use and NABH compliance by implementing structured data fields and ensuring alignment with regulatory documentation requirements, enhancing data quality.
- Performed chart audits and usage analytics to assess documentation quality, identify training gaps, and inform targeted improvement initiatives across clinical departments, using SQL queries.
- Helped deploy mobile EHR modules and onboard users, while providing Level 1 and 2 support to resolve technical issues and streamline clinical workflows, improving efficiency.
- Developed interactive dashboards using Power BI to visualize key performance indicators related to EHR usage and data quality, supporting data-driven decision-making and process improvements.

Certifications:

- CITI (Biomedical Research Investigator & Good Clinical Practice)
- RxNorm Clinical Terminology Certification
- UMLS Metathesaurus Knowledge Integration Training
- Clinical Research, Data Management & Medical Writing – 50-Hour Program
- HIPAA & Data Security Fundamentals (Internal Training)

Educational Details:

Master of Science in Health Informatics - George Mason University, Fairfax, VA

Doctor of Pharmacy (PharmD) - Arya College of Pharmacy, Sangareddy, India
