

Sasank Rasetti

Java Full Stack-Developer

Houston, TX | Mob- (409)- 651-0520 | Email- sasank.rasetticareers@gmail.com

SUMMARY

- Around 2+ years of Extensive experience as a React JS Developer and 2 years of Experience as a UI/UX Developer
 - Extensive experience in developing web pages using HTML/HTML5, XML, DHTML CSS/CSS3, SASS, LESS, JavaScript, React JS, Redux, Flex, Angular JS (1.X) jQuery, JSON, Node.js, Ajax, JQUERY Bootstrap.
 - Experience in all phases of SDLC like Requirement Analysis, Implementation and Maintenance, and extensive experience with Agile and SCRUM.
 - Extensive knowledge in developing single - page applications (SPAs).
 - Implemented easy to use Bootstrap plugins for building carousel, accordion, modal windows etc.
 - O Good Expertise in analyzing the Document Object Model (DOM) Layout, DOM Functions, and Java Script functions,
 - Cascading Styles across cross-browser using Fire Bug, Developer Tool Bar.
 - Experienced in React JS and working with React Flux architecture.
 - Experienced in working with Redux architecture using complex Object-Oriented concepts in improving the performance of the websites.
 - Experience in using React JS components, Forms, Events, Keys, Router, plus Redux, Animations and Flux concept.
 - Good Experience in React.js for creating interactive UI's using One-way data flow, Virtual DOM, JSX, React Native concepts.
 - Expertise in using Angular JS Directives, Controllers, Filters, Services, Templates, Events and Injectors.
 - Experienced in working with Node.JS and NPM modules like http-server, Marathon, inquirer, path, mongo DB, Micro Services, Request, Elastic Search, express, luck, spark and templating engines.
 - Experience in Node environment using Node.js, NPM, Grunt, Gulp, Groovy Bower.
 - Deployed applications on Google Cloud Platform using services like Google App Engine, Google Kubernetes Engine (GKE), and Compute Engine. Managed and orchestrated containerized applications using Docker and Kubernetes on GCP. Strong in using the Node.js, and Require.js and MVC Frameworks in the development of the web application.
 - Expertise in implementing the MVC architecture in backend applications using JAVA along with spring, Servlets.
-

Front-End Keywords	HTML, CSS, Bootstrap, UI Material, SASS, JavaScript, Typescript, ES6, ReactJS, Redux, React Hooks, Angular
Back-End Keywords	REST API, RESTful API, Webservice, Microservices, Python, Java, Spring Boot, Spring MCV, Spring Data JPA, Hibernate ORM, Node JS, Express JS
IDEs	NetBeans, IntelliJ IDEA, Eclipse
Web Services	RESTful, SOAP
Databases	SQL, MongoDB (NoSQL), PostgreSQL, MySQL
CI/CD& Tools	Jenkins, CodeShip
Testing tools	Junit, Mockito, React Testing Library, Jest
Cloud & Deployment	GCP
Web Server	Apache Tomcat
Other	Agile, Jira, Git, Scrum, GitHub, Bitbucket, Swagger, Open API
Operating Systems	Windows, UNIX, LINUX, MacOS.

EDUCATION

Master of Engineering in Electrical– Lamar University, USA 2024

Bachelor of Engineering in Electrical and Electronics Engineering –, India 2021

EXPERIENCE

Mphasis TX Remote | Dec 2023- Current | Java Full Stack-Developer

- Developed a full-stack web application on Google Cloud Platform (GCP), utilizing React.js for frontend, Node.js for backend, and PostgreSQL for database, ensuring seamless integration and optimal performance.
- Designed and optimized PostgreSQL database schema for efficient data storage and retrieval, enhancing backend operations' performance and ensuring data integrity.
- Implemented RESTful APIs in Node.js for smooth communication between frontend and backend components, facilitating seamless data exchange and manipulation.
- Integrated third-party authentication services such as Google Sign-In and OAuth2 with React.js and Node.js, ensuring secure user authentication and authorization.
- Created responsive and visually appealing user interfaces using React.js, HTML5, and CSS3, ensuring cross-browser compatibility and adherence to modern design standards.
- Managed deployment of frontend assets and backend services on GCP, utilizing Cloud Storage for static assets and Cloud SQL for PostgreSQL database management, ensuring scalability and reliability.
- Implemented real-time features using Web Sockets and Socket.IO in Node.js backend, enabling instant communication and updates between clients and server without continuous polling.
- Established CI/CD pipelines with Jenkins or GitLab CI/CD for automated building, testing, and deployment of the application to GCP environments, facilitating rapid iteration and deployment cycles, and ensuring code reliability and functionality.

Mphasis Chennai India| Aug 2020- Dec 2023 |Java Full Stack-Developer

- Leveraged Java for backend development, using Spring Boot to create microservices for scalability. Angular was employed on the frontend to ensure responsive and interactive user interfaces.
 - Project embraced a microservices architecture, splitting the monolithic system into smaller, independently deployable services. This approach improved scalability, modularity, and fault isolation.
 - Designed and implemented RESTful APIs, allowing for real-time data exchange between microservices and these APIs reduced the order processing time by optimizing data retrieval and minimizing data transfer overhead.
 - Optimized database queries by utilizing indexing, caching, and query optimization techniques which resulted in a 30% reduction in query execution time, improving overall system performance.
 - Maintained comprehensive technical documentation, including codebase documentation, API specifications, and system architecture diagrams which ensured knowledge transfer, collaboration, and maintenance of the system.
 - Collaborated with UX designers to create an intuitive dashboard using Angular, reducing user onboarding time by 20% also user interface components were optimized for responsiveness.
 - Utilized message brokers like Apache Kafka to enable asynchronous communication between microservices, ensuring data consistency and fault tolerance.
 - Implemented robust security measures, including role-based access control, data encryption, and regular security audits, resulting in a reduction in security incidents.
 - Generated and maintained comprehensive API documentation using tools like Swagger and Open API, facilitating API consumption by frontend and third-party applications.
-
