

Sasank Reddy Evuri

sasankdevuri214@gmail.com | San Marcos, TX | 945-244-1539

PROFESSIONAL SUMMARY

- Accomplished Software Engineer with 5 years of experience in software development, demonstrating a strong foundation in C, C++, Java, Python, and JavaScript, with a deep understanding of object-oriented programming (OOP) concepts.
- Demonstrates a deep understanding of n-tier and distributed architectures, implementing RESTful and SOAP services with Spring Boot and JAX-WS/RS to ensure efficient service communication and integration.
- Specialized in backend development with extensive experience in Java, leveraging frameworks such as Spring, Hibernate, and Spring Boot to build robust and scalable applications.
- Proficient in frontend development, using Angular to create dynamic and responsive user interfaces.
- Extensive proficiency in managing databases, including MongoDB, MariaDB, MySQL, PostgreSQL, and DynamoDB.
- Seasoned in cloud services and DevOps tools, excelling in AWS, Azure, Linux, Unix, Maven, and Git.
- Successful Full Stack Developer at Quinbay Technologies, leading the development of the BliBli Mitra Application, showcasing prowess in microservices communication using Kafka and data extraction with Google OCR.
- Demonstrated proficiency in using Spring Boot to create efficient and scalable RESTful services, ensuring robust and high-performance application development.
- Proven track record in ensuring code quality through meticulous testing practices, including Junit, Mockito, and integration test cases for REST APIs.
- Collaborative engagement with business and UI design teams, utilizing Figma and Zeplin to implement user-friendly screen designs.
- Implemented Redis caching for optimized REST API response times and streamlined API documentation using Swagger.
- Proficient in log analysis tools such as Kibana and Splunk, with expertise in automation through Rundeck.
- Expertise in utilizing advanced technologies, such as Firebase, for secure storage and retrieval of user documents, emphasizing data integrity and privacy in application development.
- Proficient in utilizing Swagger framework for comprehensive API documentation, fostering efficient communication and collaboration between backend and frontend development teams.
- Demonstrated commitment to automation with deployment experience using Rundeck, effectively automating scheduled jobs to enhance system reliability and reduce load on user-facing APIs.
- Leveraged AWS NER and Azure OCR to significantly enhance accuracy in resume parsing processes.
- Actively engages in hands-on coding across recent projects, showcasing a dedication to staying aligned with modern industry standards and practices.
- Well-versed in backend development, frontend design, API documentation, and the implementation of secure authentication strategies.
- Possesses a proven ability to quickly adapt to new concepts and technologies, making valuable contributions in fast-evolving environments.

EDUCATION

SRM Institute of Science and Technology: *Chennai, India*

B Tech in computer science

TECHNICAL SKILLS

Languages: Java, C++, TypeScript, JavaScript

Frontend Development: Angular, HTML5, CSS3, Bootstrap, Flex-Layout

Backend Development: Spring Boot, J2EE, JSP, EJB, Servlets, JNDI, JDBC, JMS, JTA, Spring MVC, Hibernate, Entity Framework, REST AND SOAP(JAX-WS/RS and Spring Framework)

Database Management: MariaDB, MongoDB, MySQL, PostgreSQL

API Development and Integration: RESTful API, GraphQL

Testing and Logging: JUnit5, Mockito, Jest, Enzyme, Mocha, Log4J

Development Tools and Version Control: Visual Studio, Eclipse, IntelliJ IDEA, GIT (GitHub, GitLab), Stash, JIRA, JAMA, Swagger, Figma, Zeplin, Rundeck, Selenium WebDriver

DevOps, CI/CD, and Containerization: Docker, Jenkins, Kubernetes, Maven, Gradle, Integration hubs(Mule ESB and Apache Kafka), Splunk, Kibana

Cloud Computing: AWS (EC2, S3, Lambda, NER, OCR), Azure, Firebase

Security and Authentication: Spring Security, OAuth, JWT (JSON Web Tokens), Custom Encryption Strategies, Redis

Operating Systems: MacOS, Linux / Unix, Windows

PROFESSIONAL WORK EXPERIENCE

State of Michigan

August 2022 – May 2024

Senior Java Developer - Remote

- Architected and developed applications using n-tier architecture (UI, business logic layer, and data access layer), ensuring clean separation of concerns and scalability. Leveraged distributed architectures for large-scale systems, integrating MuleSoft ESB and Apache Kafka for seamless communication between microservices, improving system resilience and scalability.
- Implemented RESTful services to facilitate seamless communication between the client and server, enhancing the efficiency and responsiveness of applications.
- Demonstrated in-depth expertise with JEE Framework, including Spring MVC, Spring Boot, Spring Data, and Spring Core, along with internal architecture components like JSP, EJB, Servlets, JNDI, JDBC, JMS, JTA transaction services, logging (Log4), and thread management for asynchronous Java processes.
- Proficient in developing REST and SOAP services using JAX-WS/RS or Spring framework, ensuring seamless service integration and communication.
- Built dynamic, responsive user interfaces using Angular, leveraging NgRx/Store for state management and handling asynchronous events, resulting in smooth and efficient user experiences.
- Employed Git for version control, enabling collaborative development and effective tracking of code changes, which improved team productivity and code quality.
- Managed databases using MySQL and PostgreSQL, implementing complex queries and optimizations to handle large datasets and ensure quick data retrieval.
- Skilled in building multi-module projects, compiling, building, and packaging source code into JARs, WARs, and EARs, and deploying them in application servers like WebSphere and JBoss.
- Adept at writing unit test cases using Jest, Enzyme, or Mocha to ensure code quality and reliability across diverse testing environments.
- Conducted continuous integration and deployment using Jenkins, ensuring smooth and automated delivery of updates and new features to production environments.
- Used Docker to containerize applications, simplifying deployment across different environments and improving scalability and resource management.
- Facilitated cross-functional collaboration with UI/UX designers, QA engineers, and product managers to deliver user-centric applications that met business requirements and exceeded user expectations.
- Provided ongoing support and maintenance, addressing issues, implementing updates, and optimizing performance to ensure the continued reliability and relevance of applications.
- Fostered Agile best practices by actively participating in sprint planning, daily stand-ups, and retrospectives, promoting a culture of continuous improvement and collaboration.

Environments: Java, Spring (Spring MVC, Spring Boot, Spring Data, Spring Core), Hibernate, JEE Framework, RESTful Services, SOAP, Angular, NgRx/Store, JSON, JWT (JSON Web Token), JSP, EJB, Servlets, JNDI, JDBC, JMS, JTA, Log4J, Maven, Gradle, Git, MySQL, PostgreSQL, WebSphere, JBoss, Jenkins, Docker, Apache Kafka, MuleSoft ESB.

Software Engineer**Projects:** *Blibli Mitra Application(Digital Transactions Application)*

- Spearheaded the development of Blibli Mitra, an application facilitating seamless stock replenishment and digital transactions, utilizing n-tier architecture (UI, business logic, and data access layers) for scalability and performance. Integrated with Mule ESB for efficient communication between services, enhancing the overall system reliability and responsiveness.
- Demonstrated proficiency in Java, Spring Boot, Angular, HTML, CSS, and JavaScript to create scalable and efficient applications.
- Proficient in developing REST and SOAP services using JAX-WS/RS or Spring framework, ensuring seamless service integration and communication.
- Elevated code quality by implementing unit test cases with Junit and Mockito and introduced integration test cases for REST APIs.
- Orchestrated Kafka pipelines for asynchronous communication between microservices, enhancing system performance.
- Implemented Google OCR for automatic extraction of user data from identity proofs, streamlining registration processes.
- Utilized Firebase for secure storage and retrieval of user documents, prioritizing data integrity and privacy.
- Collaborated with business and UI design teams, using Figma and Zeplin to design and implement user-friendly screens using React and React Native.
- Introduced Redis caching to optimize REST API response times, reducing database calls and improving application performance.
- Implemented Swagger for API documentation, fostering efficient communication between backend and frontend developers.
- Integrated Kibana and Splunk for effective monitoring and log analysis, improving system reliability.
- Deployed Rundeck to automate scheduled jobs, reducing load on user-facing APIs and ensuring system stability.
- Produced high-quality applications using Spring Boot, Maven, Gradle, and AWS services, ensuring scalability and reliability.
- Designed and maintained CI/CD pipelines with Jenkins, Docker, and Kubernetes, automating and streamlining deployment processes.
- Actively participated in Agile ceremonies, contributing to continuous improvement and iterative development cycles.
- Provided mentorship to junior developers, promoting best practices and fostering a culture of learning and innovation within the team.
- Displayed strong skills in Spring MVC, Spring Boot, Spring Data, Spring-Core, Spring transactions, and other JEE frameworks, with a deep understanding of architecture components such as JSP, EJB, Servlets, JNDI, JDBC, JMS, JTA transaction services, logging (Log4), thread management, and development of asynchronous Java processes.

Environments: Java, JavaScript, Spring Boot, Spring MVC, Spring Data, Spring Core, JUnit, Mockito, Kafka, Google OCR, Firebase, Oracle, Angular, HTML, CSS, React, React Native, Figma, Zeplin, Redis, Swagger, Kibana, Splunk, Rundeck, Maven, Gradle, AWS services, Jenkins, Docker, Kubernetes.

Coviam**January 2020 – September 2020****Intern****Projects:** *Resume parsing for HR team*

- Actively contributed to the Edison project at Coviam Technologies, developing a web scraping application to efficiently gather data. Additionally, worked on a Resume Parsing software aimed at streamlining HR processes and improving data extraction accuracy.
- Designed and implemented highly scalable web applications using Spring Boot, J2EE technologies, Spring MVC, Java, and Angular, significantly enhancing the efficiency and performance of the Edison project.
- Gained hands-on experience with SQL and NoSQL databases such as PostgreSQL, MongoDB, MariaDB, and DynamoDB, managing real-time data storage and retrieval in the application.

- Optimized search functionality by implementing an elastic search algorithm, improving the speed and accuracy of search APIs for the Resume Parsing software.
- Enhanced the precision of the resume parser by integrating Azure OCR and AWS NER (Named Entity Recognition), resulting in more accurate data extraction and processing.
- Developed robust web crawling applications using Selenium WebDriver, and implemented ETL (Extract, Transform, Load) microservices to efficiently process and store the collected data.
- Utilized Amazon EC2 to create and manage multiple remote desktops, increasing the scalability and efficiency of crawling applications across various instances.
- Leveraged a suite of AWS services, including EC2, S3, and NER, to develop high-performance web applications, ensuring the reliability and scalability of the Edison project.
- Implemented continuous integration and continuous deployment (CI/CD) pipelines to streamline development workflows, resulting in faster delivery of features and improvements.
- Proficient in developing and managing multi-module projects, compiling, building, and packaging source code into JARs, WARs, and EARs, with successful deployment on application servers such as WebSphere and JBoss.
- Conducted performance testing and tuning, ensuring that the web applications and microservices maintained high availability and responsiveness under varying loads.
- Provided documentation and training to the HR team, enabling them to effectively utilize the new Resume Parsing software and its features.

Environments: Spring Boot, Spring MVC, Java, MongoDB, MariaDB, DynamoDB, Elastic Search, Azure OCR, AWS NER (Named Entity Recognition), Selenium WebDriver, ETL (Extract, Transform, Load), Amazon EC2, AWS S3, CI/CD pipelines
