

## Sathvik Reddy Puli

Data Engineer · AWS · Python · PySpark · dbt · Airflow

+1 (940) 220-9117 · sathvikreddyp061@gmail.com · [Portfolio](#) · Denton, TX · Open to Relocation

### PROFESSIONAL SUMMARY

- Data Engineer with 5 years of experience designing and delivering scalable ETL and ELT pipelines, analytics-ready datasets, and cloud-native data platforms on AWS across financial services and healthcare industries.
- Proficient in Python, SQL, PySpark, and dbt for end-to-end data transformation, with hands-on experience building and orchestrating complex DAG-based workflows using Apache Airflow and AWS Step Functions.
- Experienced with AWS AI and ML services including SageMaker, Bedrock, Titan, and Rekognition, integrating intelligent data workflows, LLM pipelines, and automated document processing into production data platforms.
- Skilled in Segment and Mixpanel for event-driven data ingestion, building product analytics pipelines that translate user behavior data into actionable business insights for product and operations teams.
- Proven track record of enforcing data quality, standardization, and governance across Medallion Architecture layers, reducing reporting defects by up to 35% and pipeline processing time by 30% in production environments.
- Committed to growing data literacy across organizations by building self-serve reporting capabilities, publishing data dictionaries, and partnering with finance, product, and compliance teams to make data trustworthy and accessible.

### TECHNICAL SKILLS

**Cloud and AI/ML Services:** AWS S3, Glue, Athena, Redshift, Lambda, Step Functions, CloudWatch, CloudTrail, SageMaker, Bedrock, Titan, Rekognition, IAM

**Programming Languages:** Python, SQL, PySpark

**Data Transformation and Modeling:** dbt, ETL/ELT Pipelines, Medallion Architecture (Bronze, Silver, Gold), Fact and Dimension Tables, Data Cleansing, Standardization

**Orchestration and Processing:** Apache Airflow, Apache Spark, Kafka, Databricks, AWS Glue, DAG Management

**Event and Product Analytics:** Segment, Mixpanel, Event-Driven Ingestion, User Behavior Tracking Pipelines

**Testing and Data Quality:** pytest, Data Reconciliation, Automated Validation, SLA Monitoring

**Databases:** Amazon Redshift, PostgreSQL, MySQL, SQL Server, DynamoDB, MongoDB

**BI and Reporting Tools:** Power BI, Tableau, Looker, Sigma, Metabase, Excel

**Version Control and SDLC:** Git, GitHub, Bitbucket, Agile, Jira, ServiceNow

### PROFESSIONAL EXPERIENCE

#### Barclays

##### Data Engineer

March 2024 to Present

- Designed and built scalable AWS-based ETL and ELT pipelines using PySpark and Python to ingest and process large-scale financial datasets from Amazon S3, with dbt managing version-controlled transformation logic and clean, modular data models for downstream analytics.
- Integrated Segment event streams to capture and route user interaction and transaction data into the data platform, enabling product and business teams to analyze behavioral trends and funnel performance through standardized, analytics-ready datasets.
- Built Mixpanel-connected data pipelines to deliver product analytics insights to stakeholders, tracking user engagement metrics and supporting data-driven product decisions across banking and investment features.
- Implemented AWS SageMaker feature engineering pipelines and curated training datasets supporting fraud detection and customer risk scoring models, enabling data science teams to deploy and retrain models reliably in production.

- Integrated AWS Bedrock and Titan to deliver generative AI and large language model workflows, building enriched data pipelines for intelligent document processing and automated insights generation for internal analytics and compliance teams.
- Deployed AWS Rekognition within identity verification pipelines to automate document validation in regulated banking workflows, improving compliance data accuracy and reducing manual review overhead.
- Developed structured fact and dimension tables in Amazon Redshift supporting KPI-driven reporting and executive dashboards for finance and risk analytics teams.
- Orchestrated end-to-end data workflows using Apache Airflow with DAG-based scheduling, monitored pipeline health via AWS CloudWatch, and tracked data access via CloudTrail to ensure SLA adherence and full auditability.
- Applied data quality validation and reconciliation logic across all transformed datasets, reducing reporting defects and increasing stakeholder confidence in analytical outputs.
- Curated datasets powering Power BI, Tableau, and Sigma dashboards with standardized metric definitions to support self-serve reporting and eliminate redundant ad hoc data requests from business teams.
- Drove data literacy across the organization by authoring data model documentation, publishing data dictionaries, and conducting walkthroughs with finance, product, and analytics teams to improve confidence in self-serve reporting.
- Partnered with analytics, finance, and business stakeholders to translate complex reporting requirements into technical data solutions and communicated findings clearly to non-technical audiences.

## **Arkansas Blue Cross Blue Shield**

### **Data Engineer**

**January 2023 to March 2024**

- Designed and implemented AWS-based Medallion Architecture pipelines across Bronze, Silver, and Gold layers using Python, PySpark, and dbt to deliver analytics-ready healthcare datasets for claims, member, provider, and eligibility reporting.
- Integrated Segment to ingest member portal event data capturing user interactions such as claims lookups, plan comparisons, and provider searches, enabling member engagement analytics and digital product improvements.
- Built Mixpanel-connected data pipelines to track and analyze member behavior across digital health products, delivering curated event datasets for funnel analysis and retention reporting to product and operations teams.
- Leveraged AWS SageMaker to support predictive analytics by building clean, feature-engineered training datasets from Gold layer data for member risk stratification and claims cost forecasting models.
- Deployed AWS Rekognition within document intake workflows to automate extraction and validation of member identification and insurance documents, improving data accuracy and reducing manual processing in claims operations.
- Built Bronze layer ingestion pipelines capturing raw healthcare data across claims, eligibility, member, and provider domains with full source fidelity for audit and compliance traceability.
- Developed Silver layer transformations using PySpark and dbt for data cleansing, deduplication, standardization, and enrichment across all healthcare data domains.
- Created Gold layer KPI views and analytical models using SQL and PySpark supporting claims processing efficiency, member utilization, and provider network performance reporting.
- Optimized transformation logic and SQL queries across Silver and Gold layers, reducing processing time and improving reporting latency by approximately 30%.
- Implemented data quality checks and reconciliation logic at Silver and Gold layers, reducing reporting discrepancies by approximately 35% and improving the reliability of downstream analytics.
- Drove data literacy initiatives by creating business-facing documentation, hosting working sessions with compliance and operations teams, and building self-serve reporting capabilities that reduced engineering dependency for routine data requests.
- Monitored pipeline execution, SLA adherence, and data freshness using AWS CloudWatch and proactively resolved anomalies in collaboration with compliance and business stakeholders.

## **Narvee Technologies Pvt. Ltd.**

### **Data Engineer Intern**

**January 2020 to July 2021**

- Developed Python-based backend applications using Flask, designed RESTful APIs, and implemented database operations on MySQL and PostgreSQL to support internal business workflows.
- Built automation scripts for data processing, batch jobs, and system monitoring, and performed unit testing using PyTest to ensure code stability across pipeline components.
- Used Git for version control in a collaborative development environment, participated in code reviews, and contributed to debugging and resolving production issues.

## EDUCATION

---

- Doctor of Business Administration (DBA), Business Administration & Management Sciences (In Progress)/ Belhaven University, Jackson, MS
- Master's in University of North Texas, Denton, Texas, Dec 2022
- Bachelor of Science Degree in Mechanical Engineering, Vaagedevi College Of Engineering, 2020
