PERSONAL PROJECTS

CI/CD PIPELINE FOR A WEB APPLICATION (08/2023 - 08/2023)

- Description:** Designed and implemented a continuous integration and continuous deployment (CI/CD) pipeline for a Node.js web application.
- Technologies:** Git, GitHub, Jenkins, Docker, Ansible, AWS, Nagios.
- Configured Jenkins to automate the build and deployment process.
- Containerized the application using Docker and managed container images in Docker Hub. Automated infrastructure provisioning on AWS using Ansible.
- Integrated automated testing using Jest, ensuring high code quality and reliability. Set up monitoring and logging with Prometheus and Grafana for real-time performance tracking.

CONTAINERIZED MICROSERVICES DEPLOYMENT WITH DOCKER AND KUBERNETES (10/2023 - 10/2023)

- Description:** Designed and implemented a scalable microservices architecture for a web application using Docker for containerization and Kubernetes for orchestration.
- Technologies:** Docker, Kubernetes, Minikube, Jenkins, Nagios, Grafana, ELK Stack, Node.js, PostgreSQL.
- Containerized multiple microservices using Docker and pushed images to Docker Hub. Set up a local Kubernetes cluster using Minikube and deployed the microservices. Configured Kubernetes manifests for deployments, services, and ingress resources. Implemented CI/CD pipeline with Jenkins to automate build, test, and deployment processes. Deployed Prometheus and Grafana for real-time monitoring and alerting. Set up ELK Stack for centralized logging and log analysis.
