EDUCATION

University of Houston - Clear Lake (UHCL); Houston, TX - Masters of Science - Computer Science May 2023

Kalinga Institute of Technology (KIIT); Bhubaneswar, India - Bachelor of Technology - Computer Science Engineering May 2020

Nanhua University ; Chiayi, Taiwan- Semester Abroad January 2019 - May 2019

Relevant Coursework : Data Analysis, Computer Networking, Software Engineering, Web Security

WORK EXPERIENCE

Changing The Present

New York, NY

Web Developer Intern

February 2023 - Present

- Developed innovative front-end web design utilizing HTML, CSS, and JavaScript, resulting in a 30% increase in website traffic.
- Performed website analytics to identify areas of improvement and increased mobile responsiveness by implementing SEO best practices and performing code reviews resulting in a 15% increase in mobile traffic.
- Spearheaded front end web app development, identifying, writing and debugging maintainable code within tight deadlines, resulting in a 30% decrease in system downtime and improved problem-solving and communication skills in an agile environment.

Baylor College of Medicine

Houston, TX

Software Developer Apprenticeship

August 2022 – December 2022

- Implemented MEAN full-stack responsive visualization tool utilizing software development tools like Angular, JavaScript for frontend , Mongo DB , MySQL and Node.js for back end and AWS EC2 cloud infrastructure for hosting with 90% accuracy rate.
- Constructed software featuring an intuitive UX/UI, resulting in a 20% improvement of usability, and established similar features from IGV database, achieving 90% source code coverage within 5 months with continuous integration strategy.
- Created Restful API , implementing it on JSON and performing data driven diagnosis using Postman.

University of Houston Clear Lake

Houston, TX

Business and Member Services Assistant

October 2021 – December 2022

- Collaborated with cross functional teams, monitoring potential solutions for providing technical support related to sales and software issues and introduced changes that resulted in 95% fewer inquiries over the span of 8 months improving organizational skills.
- Optimized software and operating systems/infrastructure maintenance process by developing an automated system to perform debugging, resulting in a 40% decrease in time spent on manual updates, identifying and troubleshooting over 50 errors.

Ericsson

Kolkata, India

Software Testing Intern

March 2020 – December 2020

- Conducted end-to-end unit tests for AT&T 's 5G deployment software and created written tests resulting in a 98% accuracy rate.
- Performed code review to evaluate technical solutions across 8 global locations, achieving a 98% success rate, collaboration with software engineers to identify & resolve over 400 bugs within the system, increasing scalability and reliability by 40%.

RCPL

Guwahati, India

Application Developer Intern

May 2018 – July 2018

- Developed Android app India Tourism with GPS, Audio/Video processing features to promote tourism in the country.
- Optimized app performance through deploying advanced technologies like Machine Learning and Natural Language Processing.
- Integrated innovative features such as voice recognition & real-time analytics for enhanced user experience.

The Marketing Company

Cairo, Egypt

Web Development Intern

May 2017 - July 2017

- Controlled, maintained and deployed over 5+ business web applications, enhancing their online presence, increasing customer engagement by 40%, and resulting in a 20% monthly increase in website traffic and created detailed design technical documentation.
- Revised blog content on Wordpress for product development for a small startup, leading to a higher click-through rate of 45%.

ACADEMIC PROJECTS

[Redirected Walking on Meta Quest 2](#)

May 2023

- Built & tested user stories and a redirected walking algorithm in C++ and Blueprint to optimize walking paths in Meta Quest 2.
- Shaped a realistic moon-like environment for VR using Unreal Engine to aid in astronaut training R&D and analyzed various redirected walking algorithms to optimize user experience and reduce motion sickness in an agile software development life cycle.

Hearthstone CLI

March 2023

- Redesigned a robust and user-friendly CLI version of Hearthstone using C# ASP .NET, resulting in a seamless gaming experience.
- Executed efficient algorithms and data structures to optimize game performance, reducing average game load time by 30%.

Reading Speed Test App

May 2022

- Created Swift-based MVC software architecture application for iOS to measure users' reading speed, resulting in a 95% success rate.
- Integrated Firebase authentication system to ensure secure user login across multiple platforms, boosting user retention rate by 15%.

AI Chess Game

April 2020

- Generated an object oriented AI focused chess game utilizing C# & Visual Studio, enabling real-time multiplayer gaming.
- Composed a multiplayer AI game, and integrated advanced algorithms for a quantitative user experience with 95% code coverage.

SKILLS

Programming Languages: Python, R, SQL, PHP, C, C++, C#, Java, JavaScript, JSON, Swift, Typescript, bash, MATLAB

Frameworks: HTML5, CSS3, MySQL, Angular, Node.js, Blueprint, React.js, Express, ASP.NET, XML, AJAX, JQuery

Tools: Unity, Visual Studio, XCode, Android Studio, Eclipse, MATLAB, AWS, MongoDB, Git, Unreal Engine, Linux, Azure
