

# DevOps Engineer

Vani Puppireddy

Mail: [vanipuppireddy88@gmail.com](mailto:vanipuppireddy88@gmail.com), Phone: 913-263-8855

## PROFESSIONAL SUMMARY:

- Around 5 years of experience in the IT industry as a **DevOps/Azure/AWS Cloud Engineer**, with a strong focus on **infrastructure automation, CI/CD, source code management**, and efficient utilization of cloud resources.
- Hands-on experience in **migrating on-premises environments** to the cloud, including the design of **serverless solutions** using **AWS Lambda** for scalable and cost-effective architectures.
- Proficient in managing core **AWS services** like **EC2, VPC, S3, EBS, RDS, AMI, Route 53, IAM, CloudFront, CloudWatch, CloudTrail, SNS**, and **AWS Config**, along with experience in setting up **Auto Scaling groups** and **Elastic Load Balancers**.
- Developed **CloudFormation templates** and used **Terraform** for creating and maintaining Infrastructure as Code (IaC), automating deployments of ELBs, S3 buckets, security groups, and more.
- Expertise in **Azure services** such as **App Services, Azure Storage, Azure SQL, Azure Virtual Machines, Azure AD, Azure DNS**, and **VPN Gateway**, managing resources efficiently across different environments.
- Worked on **migrating legacy monitoring systems** to **SignalFx**, standardizing observability practices across engineering teams to enhance visibility and monitoring maturity.
- Automated the **deployment of SignalFx dashboards and alert rules** using **Terraform**, enabling version-controlled, reusable observability-as-code templates.
- Monitored essential **AWS services including EKS, EC2, RDS, and ALBs**, integrating metrics from **CloudWatch** into **SignalFx** for real-time alerting and operational awareness.
- Integrated observability pipelines with **PagerDuty** to support structured on-call responses and timely incident notifications based on alert severity and service impact.
- Skilled in writing **SQL queries** and working with various relational and NoSQL databases including **MySQL, PostgreSQL, Oracle, Cassandra, MongoDB**, and **Redis**.
- Familiar with **DevOps practices** in Agile and Scrum environments, and experienced in tools like **Git, Jenkins, Maven**, and **Ansible** for automating build, test, and deployment pipelines.
- Experienced in **web and application server deployments** on platforms like **WebSphere, WebLogic, Tomcat, Nginx**, and **JBoss**.
- Hands-on with **ServiceNow** for incident and change management processes, improving service reliability and operational workflows.

## TECHNICAL SKILLS:

- **Programming Languages:** Java, Python
- **Scripting Languages:** PowerShell, shell, Bash, YAML
- **Operating Systems:** Windows, RHEL, LINUX, Centos, Ubuntu
- **Databases:** MySQL, SQL Server 2000
- **CI Automation/ Build Tools:** Jenkins, GitHub Actions, Azure DevOps
- **Configuration management tools:** Ansible, Terraform
- **Artifactory management tools:** Nexus, Jfrog
- **Containerization tools:** Docker, Kubernetes
- **Cloud Platforms:** AWS, Azure, GCP
- **Web Servers:** Apache, Nginx
- **Application Servers:** Apache, Tomcat, Oracle DB, WebLogic, JBoss, Web Sphere
- **Services:** IaaS, PaaS, SaaS
- **Testing Tools:** SonarQube
- **Version Control System:** GIT, GitLab, GitHub
- **Monitoring Tools:** CloudWatch, CloudTrail, Splunk, Prometheus, Grafana, SignalFX, NewRelic
- **Ticketing and Tracking Tools:** JIRA, ServiceNow

## EDUCATION DETAILS:

**Master's**, Computer Science, University of Central Missouri, MO - 3.60/4.00

**Bachelor's**, Anurag Group of Institutions, Hyderabad, India – 9.8/10.0

## CERTIFICATION:

## **PROFESSIONAL EXPERIENCE:**

**Nike, Portland, OR**

**Jul 2024 – Till Date**

**DevOps Engineer/ Site Reliability Engineer**

### **Responsibilities:**

- Supported multiple development teams and parallel release cycles, acting as a key **DevOps** person across projects.
- Migrated on-premises applications to **AWS** using **Snowball**, **Terraform**, and **Ansible**, improving scalability and performance.
- Provisioned and managed **AWS** services including **EC2**, **S3**, **EBS**, **IAM**, **VPC**, **ELB**, and implemented **SSL** security for database communications.
- Automated infrastructure provisioning, configuration, and deployments using **Ansible** and custom **Shell/Python scripts**.
- Developed **CI/CD** pipelines with **Jenkins**, **Git**, **GitHub**, and **SonarQube** to streamline software builds, testing, and deployments.
- Containerized microservices using **Docker** and orchestrated deployments with **Kubernetes**, including pod creation and lifecycle management.
- Built and deployed custom **AMIs**; scripted **EBS** encryption tasks using **Boto3** to meet security compliance requirements.
- Configured **CloudFormation** and **Terraform** modules to implement **Infrastructure as Code** across **VPC**, **subnets**, **load balancers**, and **EKS clusters**.
- Implemented centralized logging with **ELK Stack (Elasticsearch, Logstash, Kibana)** to enhance observability and troubleshooting.
- Set up proactive monitoring and alerts using **AWS CloudWatch**, improving incident response and system uptime.
- Automated the release pipeline to enable zero-touch deployments using **Jenkins**, **SVN**, **Nexus**, and **shell scripting**.
- Designed and documented **Load Balancer** configurations, **firewall rules**, and **security groups** to support infrastructure deployments.
- Used **Git** administration scripts to automate repository operations and integrated **Git** workflows with Jenkins.
- Designed and maintained **Splunk** dashboards and custom alerts to monitor application performance, detect anomalies, and ensure system health across microservices.
- Integrated **Splunk** with **AWS CloudWatch**, **PagerDuty**, and **ServiceNow** to centralize log analysis and automate incident creation and escalation workflows.
- Built advanced **SPL** queries in **Splunk** for root cause analysis, trend detection, and performance troubleshooting in distributed environments.
- Developed and optimized **SignalFx** detectors and charts to proactively identify memory leaks, **CPU** saturation, and service latency issues.
- Migrated legacy monitoring systems to **SignalFx** and standardized observability practices across teams for improved monitoring maturity.

**Environment:** AWS (EC2, S3, EBS, ELB, IAM, CloudFormation, VPC), Terraform, Ansible, Docker, Kubernetes, Jenkins, Git, GitHub, SVN, Nexus, TFS, SonarQube, ELK, CloudWatch, Redis, SQL Server, PowerShell, Python, Bash, C#.NET, IIS, Wiz, Windows/Linux, Splunk, SignalFX, Newrelic

**Artemis ABA Inc, Addison, TX**

**Aug 2023 – June 2024**

**Cloud DevOps Engineer**

### **Responsibilities:**

- Automated **CI/CD** pipelines using **GitHub Actions** and **Azure DevOps (VSTS)**, ensuring reliable and efficient build, test, and deployment workflows across environments including **Azure Kubernetes Service (AKS)**.
- Deployed containerized **microservices** using **Docker** and **Kubernetes**, managing application lifecycles with **Helm charts** and orchestrating deployments through **Jenkins** pipelines.
- Designed and maintained infrastructure on **Microsoft Azure** using **Terraform**, managing resources such as **Virtual Machines**, **DNS**, **subnets**, **networks**, and container instances through **Infrastructure as Code (IaC)**.
- Implemented **GitOps** workflows with tools like **Argo CD** and **Flux** to enable continuous delivery, version-controlled infrastructure, and policy-driven governance.
- Created and managed custom **Docker** images, performed image tagging and pushed them to **container registries**, streamlining container-based deployments.
- Developed and maintained **Ansible** playbooks and roles for automated provisioning and configuration of Java-based applications across Linux environments.
- Utilized **Azure Kubernetes Services (AKS)** for managing workloads via **pods**, **replica sets**, **ConfigMaps**, **selectors**, and other native **Kubernetes** components.

- Integrated monitoring solutions such as **Prometheus** and **Grafana** for centralized metrics visualization and alerting across multi-cloud environments, deploying **Prometheus** via **PowerShell** automation scripts.
- Leveraged **Datadog** for real-time application monitoring, performance analysis (**APM**), and operational visibility, identifying performance bottlenecks and optimizing system behaviour.
- Configured **Azure App Service** deployment slots (e.g., staging and production) to enable seamless and zero-downtime deployments.
- Implemented **Azure Functions** with HTTP Triggers and enabled Application Insights integration for telemetry and load testing through **Azure VSTS**.
- Used **Chef** in conjunction with **Azure Resource Manager (ARM)** templates to automate provisioning and configuration of cloud infrastructure.
- Built **Azure** applications using multiple technologies (e.g., **Python**, **Visual Studio**), and configured data persistence on **Azure Virtual Machines**.
- Integrated **Azure Log Analytics** with **Azure VMs** to monitor logs, track system metrics, and enhance visibility into application performance.
- Designed and developed custom dashboards and executive-level reports in **Wiz** based on leadership requirements, providing actionable insights into cloud security posture.
- Built and managed **Cloud Configuration Rules (CCRs)** and Security Graph queries to detect policy violations, misconfigurations, and risky resource relationships across cloud assets.
- Executed test cases for newly created cloud resources, ensuring alignment with organizational security policies and compliance benchmarks.
- Managed subscription-level onboarding, tagging resources to the appropriate **Wiz** projects and ensuring accurate scoping of visibility and enforcement.
- Created and governed **Wiz** roles and group policies, implementing least-privilege access and **RBAC** to align with enterprise security standards.
- Used **Azure** services including Application Insights, **DocumentDB**, **Key Vault**, and **Azure SQL** to build secure and highly observable applications.
- Demonstrated expertise in managing both **PaaS** and **IaaS** models on Azure and utilized **Visual Studio** Online for cloud-based development and collaboration.
- Applied **SonarQube** for continuous code quality analysis and integrated static code analysis into **Jenkins** pipelines.
- Gained experience using **OpenShift** for deploying containerized workloads in enterprise **Kubernetes** environments.

**Environment:** Kubernetes, Jenkins, Azure, Azure Repos, Azure DevOps Pipeline, Shell, Python, Docker, Terraform, Ansible, Chef, AKS, OpenShift, Helm, Groovy, SonarQube, My SQL, Postgres, Snowflake, Prometheus, Grafana, Splunk, Git, Maven, Jira, Dynatrace.

**Capgemini Technology Services, Hyderabad, India**

**Dec 2020 – July 2022**

**Cloud DevOps Engineer**

**Responsibilities:**

- Built and deployed CI pipelines for React applications using **AWS CodeCommit** and **CodeBuild**, incorporating **linting** and **unit testing** stages to ensure code quality before deployment.
- Designed **custom dashboards and metrics in Datadog** to provide deep visibility into application and infrastructure performance, enabling teams to proactively optimize workloads.
- Developed **CloudFormation templates** to automate AWS resource provisioning and transitioned infrastructure to be compliant under **AWS Control Tower**.
- Leveraged **Amazon ECS** and **EKS** for managing containerized workloads with scalable, fault-tolerant infrastructure.
- Established centralized logging using **AWS CloudWatch Logs** and the **ELK stack**, helping streamline performance monitoring and issue resolution for containerized applications.
- Set up proactive **monitoring and alerting** for **EKS clusters** using tools like **Prometheus**, **Grafana**, and **CloudWatch**, ensuring early detection of system issues.
- Successfully onboarded multiple cloud accounts (AWS, Azure, GCP) into **Wiz** by configuring secure cloud connectors and validating integration health across environments.
- Generated and analysed vulnerability and misconfiguration reports, coordinated with relevant teams for remediation, and ensured timely resolution of critical findings.
- Provisioned infrastructure using **Terraform**, integrating with **HashiCorp Vault** and **Foreman** for secure secrets and configuration management.

- Built and maintained **CI/CD pipelines** using **Jenkins**, **GitLab CI/CD**, and **AWS CodePipeline**, automating both application and infrastructure deployments.
- Integrated **Jira** into the development lifecycle, enabling automatic updates to issues based on code changes and improving traceability with Git-based version control systems.
- Provisioned AWS services like **VPC**, **EC2**, **Auto Scaling**, **ELB**, **ElasticSearch**, **Lambda**, **CloudFront**, **RDS**, **ECS**, and **CloudWatch Event Rules** using **CloudFormation templates**.
- Authored **Ansible playbooks** in **YAML** to automate server provisioning and streamline the **Continuous Delivery pipeline**, running these scripts to manage development environments.
- Installed and configured **Splunk**, using it to analyze server logs and proactively detect and resolve production issues.
- Streamlined **DevOps processes** by integrating workflows with **ServiceNow**, enabling improved automation of ticketing and change management.
- Managed **Jenkins pipelines** using **Groovy scripting** and the **Jenkins DSL plugin**, building flexible automation flows for continuous integration.
- Wrote **Python scripts** using **Boto3** and **Bash** to complement automation done via Terraform and Ansible, performing tasks such as EBS volume encryption and scheduled Lambda executions.
- Administered **AWS Cloud services** including **SES** and **SNS**, supporting messaging and notification functions within deployed solutions.
- Created **custom Python modules** to enhance Ansible automation and expand its capabilities in infrastructure provisioning.
- Built containerized environments for testing using **Docker**, and managed orchestration and scaling with **Kubernetes**.
- Connected **Git** with **Jenkins** to automate code checkout and deployments. Used **Packer** with **Terraform** to create machine images and **Ansible** to automate setup.
- Monitored **AWS** resources using **CloudWatch** and **CloudTrail** for logs, alerts, and audits to keep systems secure and reliable.
- Used **Splunk** for checking logs and monitoring the health of infrastructure. Worked with admins to make sure **Splunk** ran smoothly.

**Environment:** AWS (EC2, S3, EBS, EFS, VPC, IAM, CloudWatch, CloudTrail, Elastic Beanstalk, CloudFormation), Terraform, Ansible, Docker, Kubernetes, Jenkins, Git, Nexus, SVN, Splunk, Nagios, Python, Bash, PowerShell, Maven, Java/J2EE, Linux, WebLogic, Tomcat, Grafana, Wiz, MySQL database, JIRA.

**DXC Technologies, Hyderabad, India**

**May 2019 – Nov 2020**

**DevOps Engineer**

**Responsibilities:**

- Performed day-to-day system administration tasks including resource monitoring, user support, and applying security best practices in **Azure**.
- Installed and configured **Red Hat Linux** using **Kickstart** and applied system hardening policies as per organization standards.
- Managed system backups, scheduled and maintained **CRON jobs**, monitored logs, and tuned performance for **Azure-hosted VMs**.
- Configured **Azure Virtual Machines** and managed **Azure Disks** using **Logical Volume Management (LVM)** for both local and managed disks.
- Automated code deployments using **Azure Repos** and **Git**, and developed scripts to streamline version control operations.
- Used **Azure Active Directory (AAD)** to create and manage user accounts, roles, and permission policies.
- Deployed highly available **Azure Virtual Machines** using **ARM (Azure Resource Manager) templates** and custom **Terraform** modules.
- Used **Terraform** to provision and manage **Azure** infrastructure such as **Virtual Networks**, **Network Security Groups**, and **Storage Accounts**.
- Designed and implemented infrastructure in **Azure** using services like **Azure VNet**, **Azure VM**, **Azure Blob Storage**, **Azure Load Balancer**, **Azure Scale Sets**, and **Azure SQL Database** with **ARM templates**.
- Configured **Azure Load Balancers** and integrated them with **Virtual Machine Scale Sets** to ensure application availability and scaling.
- Developed and applied **Puppet** modules to manage packages, configure system tools, and automate SSH tunnel configurations.
- Scheduled **Azure Backup** and **Snapshot** tasks, including managing recovery points before performing updates or system maintenance.

**Environment:** Microsoft Azure (including App Services, VNets, Web & Mobile Apps, Blobs, Resource Groups, Key Vault, Azure SQL), Bitbucket, Azure Repos, Ansible, Docker, Kubernetes, Terraform, PowerShell, Linux, Maven.
