

Venkata Sairam Mandapati

☎ +1-774-271-4376 | ✉ venkatmv73@gmail.com | 💼 [LinkedIn](#) | Boston, MA

PROFESSIONAL SUMMARY

Experienced **Full Stack Java Developer** skilled in designing and developing client-server applications using **Java/JEE** and modern web technologies. Proficient in the full **Software Development Life Cycle** and Agile environments, with expertise in Java frameworks like **Spring Boot** and **front-end technologies** such as **React.js**. Successfully implemented **microservices architecture** and integrated cloud solutions on **Azure** and **AWS**. Committed to leveraging technical skills to build scalable and secure applications.

TECHNICAL SKILLS

- **Frontend Technologies:** HTML5, CSS3, JavaScript, React.js, Redux, Next.js, Bootstrap, jQuery, AJAX, Angular, Vue.js
- **Backend Technologies:** Java, C++, Python, Node.js, Spring Boot, Spring MVC, Hibernate, RESTful APIs, JMS, Kafka, Microservices, Maven, JSON, Apache Tomcat
- **Database Technologies:** MySQL, PostgreSQL, SQL Server, MongoDB
- **Testing Tools:** JUnit, Mockito, TestNG, Spring Test, Postman, JMeter, Cypress, Selenium
- **Cloud Platforms:** Microsoft Azure: App Service, AKS, Azure Functions, Azure SQL Database, Blob Storage, Service Bus, Load Balancer, Monitor, Key Vault, Amazon Web Services (AWS): Lambda, S3, RDS, EC2, CloudWatch, Elastic Beanstalk
- **DevOps & Tools:** Git, GitLab, Jenkins, Docker, Kubernetes, VS Code, Eclipse, IntelliJ IDEA, JIRA, OAuth
- **Development Methodologies:** Agile (Scrum), Waterfall
- **Operating Systems:** Linux Administration
- **Web Services:** REST, SOAP

PROFESSIONAL EXPERIENCE

DXC Technology

Java Full Stack Developer

Jan 2024 - Present
Remote

- Analyzed, designed, and implemented applications using **Java 11**, **J2EE**, **XML**, **XSLT**, and **Web Services (REST, WSDL)**.
- Developed **RESTful APIs** for a PC renewal tool, enhancing device data accuracy and reducing leasing costs for unused assets.
- Optimized server-side components with **Java** and **Spring Boot**, facilitating the creation of **RESTful APIs** and **microservices**.
- Developed Single Page Applications (SPAs) using **Angular**, implementing component-based architecture for enhanced user experience and maintainability.
- Led the redesign and migration of a legacy **IBM WebSphere** application to the OpenShift Container platform.
- Developed applications using the **Enterprise Java Struts framework** within a **WebSphere Liberty environment**, improving application performance and **user experience**.
- Implemented multi-branch pipelines to streamline integration and delivery processes, reducing deployment time and increasing team productivity.
- Applied best practices for hosting **Java Spring Boot** applications to achieve scalability and zero downtime, enhancing system reliability and user satisfaction.
- Transitioned **Jenkins production pipelines** to **Tekton** for building and deploying web applications in OpenShift on GCP, automating deployment processes and reducing manual errors.
- Leveraged **Java 11 lambda expressions** and functional interfaces to enhance code efficiency, resulting in cleaner code and faster execution times.
- Utilized **JSP**, **JSTL**, and **AJAX** for the presentation layer, **Spring** for the business layer, and **Hibernate** for persistence, enhancing application responsiveness and maintainability.
- Designed and implemented a **microservices architecture** using **Spring Boot** for modular and independent applications, improving scalability and deployment efficiency.
- Developed user interfaces with **JSP**, **JavaScript**, **AJAX**, **HTML5**, **DHTML**, and **CSS3**, resulting in a more interactive and user-friendly application experience.
- Created multiple **POCs** for routing, forms, and **RESTful API** integration using **Angular**, employing custom pipes for data formatting, which streamlined data processing and improved prototype validation.
- Implemented **Java Messaging Services (JMS)** for reliable notification delivery and asynchronous communication of critical information, enhancing system reliability and message processing efficiency.
- Employed **Spring MVC** for the presentation layer, enhancing user interface design through **JSPs** and tag libraries.
- Ensured code quality with automated **CI/CD pipelines** using **Jenkins**, **GitHub Actions**, and **Docker** for containerization.
- Utilized **Angular CLI** and **TypeScript** to develop controllers and components for web pages.
- Integrated the **Spring Framework** with **Hibernate** to support dependency injection and transaction management.
- Supported **Perl** application enhancements by collaborating with team members to identify and implement improvements, resulting in increased application efficiency.

Tech Mahindra

Java Developer

May 2021 - Sep 2022
Hyderabad, India

- Spearheaded the development of robust backend services using **Java**, **Spring Boot**, and **Azure SQL** as the database, contributing to a 40% increase in system stability and a 20% decrease in server downtime for the Virtual Home Furnishing Experience feature.

- Designed and optimized stored procedures in **Azure SQL Database** to handle complex queries efficiently, improving database performance and reducing execution time by 35%.
- Applied query optimization techniques such as indexing, partitioning, and query restructuring to enhance database performance, resulting in faster data retrieval and improved application responsiveness.
- Implemented authentication and authorization using **Spring Security** and **OAuth2**, enhancing application security and ensuring secure user access.
- Integrated **Swagger UI** and wrote integration tests along with **REST** documentation, improving **API** usability and ensuring reliable system integration.
- Integrated and Developed **REST APIs** using **Hystrix** and **Feign clients** for efficient fault tolerance and fallback mechanisms.
- Designed and implemented comprehensive testing strategies, conducting over 500 unit tests with **JUnit** and **Mockito**, achieving a test coverage of 95% and ensuring a 99.9% bug-free feature release.
- Implemented **Azure Blob Storage** for secure and efficient storage of 3D models and user-generated content, reducing data retrieval time by 50% and improving overall application performance by 30%.
- Utilized Azure Functions and **Azure API Management** to create serverless APIs, enhancing the application's scalability and reducing operational overhead.
- Leveraged Azure Service Bus for asynchronous messaging between **microservices**, improving system reliability and scalability.
- Implemented **Azure** Monitor and Application Insights to track application performance and log errors, which enhanced debugging capabilities and improved system reliability.

Dr. Reddy's Laboratories

Jun 2020 - Apr 2021

Java Developer

Hyderabad, India

- Worked to conceptualize, design & implement enhancements to the virtual classroom platform resulting in a 30% increase in user engagement and a 20% improvement in student performance.
- Implemented **RESTful APIs** using **Spring Boot** for backend integration, streamlining communication between the front and backend, improving performance and maintainability.
- Employed the Spring Framework (**Spring Boot 2.5**, **Spring MVC**) to facilitate rapid development and create a scalable **microservice architecture**.
- Developed real-time collaboration features using **WebSockets**, resulting in a 50% increase in student-instructor interaction and engagement.
- Integrated multimedia capabilities using **JavaScript** libraries like **React 17** to enable dynamic content sharing, presentations, and video streaming, leading to a 25% increase in content consumption and retention rates.
- Stored user profiles, assessment data, and content repositories in **MySQL 8.0**, improving data retrieval speed and reliability.
- Built and maintained **CI/CD pipelines** using **Jenkins** and **Docker** for continuous integration and delivery, ensuring rapid, error-free deployments.
- Utilized logging and monitoring tools like **AWS CloudWatch** and ELK Stack (**Elasticsearch**, **Logstash**, **Kibana**) to monitor platform health and identify areas for improvement, proactively addressing issues before they affected users.
- Integrated **AWS cloud services** like **Amazon S3** and **EC2** for storage, enhancing scalability and ensuring data redundancy.
- Developed and deployed applications in Linux-based environments, optimizing platform performance and management on Linux servers.

Smart Stream Technologies

Jan 2019 - Mar 2020

Full Stack Developer

Bengaluru, India

- Assisted in developing and testing applications using **Agile** and **SCRUM** methodologies to meet project timelines and quality expectations.
- Designed core modules and utility classes in **Core Java**, following **OOP principles** for reusability and simplicity.
- Utilized **Java Multithreading** and Collections API to implement concurrent operations, enhancing application performance.
- Developed and supported **RESTful Web Services** for seamless data exchange between frontend and backend systems.
- Contributed to building responsive user interfaces using **HTML5**, **Angular**, and **JavaScript** for interactive dashboards.
- Worked on mobile app development using **Android (Java)**, integrating backend APIs for real-time data synchronization, which improved data accuracy and user experience.
- Integrated authentication and authorization features using Spring Security, enhancing secure application access and protecting user data.
- Provided troubleshooting support for applications hosted on Linux/UNIX servers, reducing downtime and improving system reliability.
- Consumed **REST APIs** using Rest Template for frontend data integration in mobile and **web applications**, enhancing **data flow** and user interaction.
- Wrote unit tests with **JUnit** to validate functionality and ensure software reliability, leading to fewer bugs and higher code quality.
- Utilized **Docker** to create and manage containerized environments, enhancing application deployment efficiency and reliability.
- Worked with **Amazon DynamoDB** for basic **NoSQL** database operations, optimizing mobile app performance.
- Assisted in setting up **CI/CD pipelines** with **Jenkins**, streamlining build and deployment tasks in AWS for faster release cycles.
- Executed **SQL queries** for data validation, ensuring data integrity and supporting resolution of data quality issues in **Oracle databases**.
- Conducted basic testing of Web Services using **SoapUI**, ensuring smooth integration and functionality, which improved system reliability.
- Debugged and optimized Java-based mobile applications using **JMeter**, improving performance and ensuring a smooth user experience.

EDUCATION

Northeastern University

Sep 2022 - 2024

Master of Science, Information Systems

SRM University

Aug 2017 - 2020

Bachelor of Technology, Electronics and Communication Engineering (ECE)
