DATA ANALYST | BUSINESS ANALYST | BI ANALYST

Data Analyst with 3+ years of experience delivering business insights using SQL, Python, Excel, and Power BI. Strong background in dashboarding, forecasting, data modeling, and reporting automation. Currently pursuing an MS in Business Analytics with hands-on experience supporting analytics education and real-world datasets.

TECHNICAL SKILLS

Languages & Tools: Python, SQL, R, Power BI, Tableau, Advanced Excel, MySQL, SQLite

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Statsmodels

Analytics Skills: Data Analysis, Dashboarding, Reporting Automation, Forecasting, Data Modeling, KPI Tracking, Business Intelligence

PROFESSIONAL EXPERIENCE

Data Analyst — Spider Focus Solutions, India

Jun 2021 – Sep 2024

- Analyzed large business datasets using SQL, Excel, and Power BI, improving decision-making efficiency by 25%
- Built automated dashboards and Excel workflows, reducing manual reporting time by 30%
- Identified sales trends and seasonality, improving forecasting accuracy by 15%
- Redesigned data intake and validation processes, improving data accuracy and consistency
- Partnered with stakeholders to translate business requirements into analytical solutions

Teaching Assistant – Business Analytics (ISDS 361B) — CSU Fullerton

Aug 2025 – Present

- Supported instruction in data visualization, predictive modeling, and analytics-driven decision making
- Conducted weekly labs covering data cleaning, regression, and forecasting using Excel and Python
- Assisted students with statistical inference, model evaluation, and interpretation
- Collaborated with faculty to enhance Excel-based analytics projects

Research Associate – AI for Wildfire Analytics

California State University, Fullerton (CSUF) | Present

- Researching California wildfire detection and risk prediction using satellite fire metrics (FRP), meteorological, and geospatial data; building ML/DL baselines (e.g., TabNet, spatio-temporal CNN/ConvLSTM concepts) for forecasting risk and spread
- Designing a hybrid AI pipeline combining domain ML models for numeric prediction with LLM-based literature synthesis and interpretability, following best practices identified in recent wildfire AI studies

Research Methods / Data Sources:

Remote sensing (MODIS/VIIRS FRP), meteorological time series, spatio-temporal feature engineering, tabular ML, deep learning, model evaluation (MAE/MSE/F1)

EDUCATION:

M.S. Information Systems – Business Analytics

California State University, Fullerton | GPA: 3.6 / 4.0

Jan 2025 – Dec 2026 (Expected)

B.E. Computer Science

East Point College of Engineering | Aug 2016 – Nov 2020

PROJECTS:

Inventory Analytics System (MySQL, Power BI)

- Designed relational database and dashboards improving inventory visibility by 40% and reducing stockouts by 20%

Sales Trend Analysis (Excel, SQL)

- Identified high-performing SKUs, contributing to 10% revenue growth

Performance Dashboard (Python, Power BI)

- Built interactive KPI dashboards from scraped and cleaned datasets

CERTIFICATIONS:

Google Data Analytics | IBM Python for Data Science | IBM SQL for Data Science | Tableau (RIT-x)
