

Anirudh Venu Gopal

Software Developer

Houston, TX | anirudh.v@worksemails.com | +1 (480) 953-6616 | GitHub | LinkedIn

SUMMARY

- Software Developer with around 4 years of experience in designing scalable systems, optimizing APIs, and delivering end to end solutions across cloud, web, and data driven environments. Skilled in Python, Java, JavaScript, React, Node.js, Spring Boot, SQL, and Snowflake, with strong knowledge of microservices, ETL/ELT pipelines, and distributed architectures.
- Experienced in AWS, Azure, and GCP with hands-on expertise in CI/CD automation, data visualization, secure coding practices. Adept at improving performance, system reliability, reporting accuracy through data modeling, automation, machine learning integration within Agile settings.

SKILLS

- Programming & Development:** Python, Java, JavaScript, TypeScript, Node.js, React, Angular, Vue.js, Spring Boot, Django, RESTful APIs, Microservices Architecture, Object Oriented Design, Functional Programming
- Data Management & Databases:** SQL, NoSQL (MongoDB, Cassandra, DynamoDB), PostgreSQL, MySQL, ETL/ELT Pipelines, Data Modeling, Query Optimization, Snowflake, Data Warehousing
- Cloud & DevOps:** AWS (EC2, Lambda, S3), Microsoft Azure, Google Cloud Platform (GCP), Docker, Kubernetes, Jenkins, Git/GitHub, Terraform, CI/CD Pipelines, Serverless Computing, Cloud Native Applications, DevSecOps Principles, Identity & Access Management (IAM), Vulnerability Mitigation
- AI / Machine Learning Integration:** Model Deployment with APIs, AI/LLM Integration, Prompt Engineering, Python ML Libraries (Pandas, NumPy, Scikit-learn), Data Pre-processing & Automation, AI driven Workflows
- Software Engineering & Architecture:** Agile / Scrum / Waterfall Methodologies, SDLC Management, Secure Coding Practices, API Gateway Management, Distributed Systems, Performance Optimization, System Scalability, Code Review & Refactoring
- Cybersecurity & Compliance:** Application Security, Threat Modeling, Data Encryption, OWASP Top 10
- Tools & Frameworks:** VS Code, Postman, JIRA, Confluence, GitLab CI, Bitbucket, Figma, Swagger, Apache Kafka, Redis, Elasticsearch
- Testing & Automation:** Unit & Integration Testing (JUnit, PyTest, Jest), API Testing, Test Driven Development (TDD), Continuous Testing Frameworks, Quality Assurance Automation
- Data Visualization & Analytics:** Power BI, Tableau, Google Analytics, Excel (Power Query, VBA, Data Models), KPI Dashboards, Reporting Automation
- Soft & Professional Skills:** Analytical Thinking, Problem Solving, Team Collaboration, Adaptability, Business Acumen, Technical Communication, Time Management, Agile Mindset, Continuous Learning

WORK EXPERIENCE

Intuit, USA | Software Developer

Jan 2025 - Present

- Improve microservice response efficiency through API gateway tuning and cache optimization, shortening average latency by 47%.
- Elevating data accuracy in Snowflake by refining SQL and ETL pipelines, reducing data discrepancies by 39% across three major applications.
- Strengthened authentication layers via IAM and DevSecOps principles, cutting unauthorized access alerts by 60% in six months.
- Enhancing scalability of cloud functions on AWS Lambda Azure Functions, supporting 24% higher transaction volume during seasonal load spikes.
- Streamline CI/CD pipelines using Jenkins and Terraform, accelerating release cycles from 15 days to 4 days without compromising QA quality.
- Refining API structures across React and Node.js services, boosting internal API consumption efficiency by 34%.
- Increasing dashboard insight adoption by integrating Power BI with Snowflake, leading to \$1M in saved reporting effort annually.
- Minimize vulnerability exposure by implementing OWASP based audit scripts, bringing down CVE findings per release by 43%.
- Reconfigured Kubernetes clusters for distributed workloads, improving system uptime to 99.96% across production environments.
- Introducing data driven testing automation (PyTest, Jest), reducing manual QA effort by 279+ hours per quarter.
- Elevated Power BI dashboard interactivity through DAX optimization, enabling real-time visibility into KPI movements.

Maruti Techlabs, India | Software Developer

Aug 2020 - Jun 2023

- Increased process throughput by optimizing Node.js and Spring Boot logic, cutting compute resource costs by \$96K annually.
- Accelerated client onboarding system by embedding Python based AI models, trimming user verification time from 2.2 minutes to 48 seconds.
- Improved code stability by introducing structured TDD practices, leading to zero post deployment rollbacks for four consecutive releases.
- Enhanced BI accuracy by refining ETL data mapping in PostgreSQL and MongoDB, achieving 99.9% data consistency across reporting pipelines.
- Integrated serverless architecture for analytics workflows on AWS and GCP, reducing infrastructure overhead by 29%.
- Advanced security posture by encrypting critical data layers and enforcing OWASP standards, eliminating high risk vulnerabilities in audits.
- Revamped Redis caching and API routing logic, cutting API timeout frequency by 52% under heavy concurrency.
- Strengthened DevOps reliability through containerized deployment pipelines in Docker and Kubernetes, enabling 16% faster rollback recovery.
- Reconstructed KPI dashboards using Power BI and Excel VBA models, exposing real time variance trends for finance and operations teams.
- Enhanced collaboration outcomes through clear JIRA sprint documentation, Confluence playbooks, improving sprint delivery predictability by 29%.
- Enhanced analytical output through Excel Power Query integration with API endpoints, saving 10+ analyst hours weekly.
- Reinforced data confidentiality via AES-256 encryption in database layers, aligning fully with client compliance mandates.
- Introduced structured version control with Git and Bitbucket branching strategies, improving code merge accuracy by 34%.

EDUCATION

Master in Information Technology | Arizona State University, Tempe, AZ

Bachelor in Computer Science Engineering | Gitam University, India
