

Name: Anju Panday
Email: anju.p4382@gmail.com
Ph#: 4698930512

Education:

St Cloud State University

Masters in information assurance

St Cloud, MN
December 2022

St Cloud State University

Bachelor of Science in Information System

St Cloud, MN
December 2021

Professional Summary:

- Over **4+ years** of experience in Web/Application Development as a **Python Developer** in analytical programming using python with skills in analysis, design, development, testing and deploying software applications.
- Experienced with full software development life-cycle (**SDLC**), architecting scalable platforms, object-oriented programming (**OOPs**), database design and **agile** methodologies.
- Expertise in developing **N-tier** Web applications using **Python** programming language and other frameworks.
- Good experience of software development in **Python (CSS DataFrame, SQLAlchemy, API, urllib2, MySQL Connector, PyMySQL for database connectivity)**.
- Extensive experience in **system analysis, design**, development and implementation of web based and client/server application using **Python, Django, PySpark, HTML5, CSS3, JavaScript, XML**
- Experience in Implementation of **MVT** architecture using **Servlet, Django, and RESTful, SOAP** web service.
- Experience in creating initial website prototypes from **Django skeleton** and building out Views, Templates using **CSS** for the whole site following **Django MVT** architecture.
- Experience using python libraries like **Pandas, NumPy, matplotlib, SciPy** to Loading the dataset, summarizing the dataset, visualizing the dataset, evaluating some algorithms and making some predictions.
- Experiences in using **Jenkins** and **Docker** for Software development and deployment.
- Experiences with advanced **Excel** development skills, focusing on the utilization of **pivot tables** and proficiency in formulas and macros for enhanced data analysis and reporting capabilities.
- Experience in working with **AWS (Amazon Web Services)** cloud platform and its features which includes **EC2, IAM, EBS CloudWatch, AWS Config and AWS S3**.
- Experience analyzing very large, complex, multi-dimensional data sets and developing analytic solutions, experience in predictive analytics using **Python**.
- Experience with Unit testing/ Test driven Development (TDD).
- Experience in developing and implementing **REST and SOAP** Web Services.
- Expertise in implementing **Object Oriented Python, Hash Tables (Dictionaries) and Multithreading, Django and MYSQL**.
- Excellent Experience of Databases such as **MySQL, Oracle, Microsoft SQL Server, PostgreSQL, SQL/PL SQL** concepts.
- Excellent experience with **Python** development under **Linux OS**.
- Experienced in **Agile** Methodologies and **SCRUM** process including Sprint planning, backlog grooming, Daily Stand-ups and Code review.
- Excellent communication and interpersonal skills, detail oriented, analytical, time bound, responsible team player and ability to coordinate in a team environment and possesses a high degree of self-motivation and a quick learner.
- Demonstrate proficiency in working with **SOAP** and **REST APIs**, leveraging microservices design principles to create scalable and interoperable solutions.

Technical Skills:

Languages	Python, Java, Shell Script, SQL, PySpark
Python Framework	Django, Flask
Python Libraries	NumPy, Matplotlib, Pandas, Scipy
IDE's	Eclipse, Pydev, PyCharm, Spyder

Web Technologies	AJAX, JavaScript, HTML5, CSS3, XML, JQuery
Versioning Tools	Subversion, GIT, SVN, CVS
Web servers	AWS, WebLogic, WebSphere
Databases	MySQL, SQL Server, Oracle
Operating systems	Linux/Unix, Windows Variants

Professional Experience:

Client: Samsung, Irving, TX

April 2024 – Present

Role: Python Developer

Responsibilities:

- Involved in analysis, specification, design, and implementation and testing phases of **Software Development Life Cycle (SDLC)** and used agile methodology for developing applications.
- Developed the application using the **Test-Driven methodology** and designed the unit tests using **Python** Unit test framework.
- Developed web application in **Django** Framework **MVT** architecture.
- Developed user interfaces of the application using front end technologies and used **API's** developed using **Django REST** framework to pull data from the backend, showing it to the user.
- Involved in development using **Python**, bug fixing and unit testing of the layout commands.
- Involved in generating various capacity planning reports (graphical) using **Python** packages like **Numpy, matplotlib**.
- Performed data migration, cleansing, profiling, and **ETL** (Extract, Transform, Load) processes to ensure data quality and reliability.
- Developed and deployed applications using **Docker** for streamlined development process and enhanced productivity.
- Wrote **Python** scripts to parse **XML** documents and load the data in database and developed web-based applications using **Python, CSS3 and HTML5**.
- Created **Django** Models and involved in **Django** migrations. Worked with caching using **Django** Caching Framework to improve application performance.
- Used **PyQuery** for selecting **DOM** elements when parsing **HTML**.
- Used collections in **Python** for manipulating and looping through different your defined objects.
- Used **Amazon Web Services (AWS)** for improved efficiency of storage and fast access.
- Used **Python** and **Pandas** library, built data analysis graph for documentation and record.
- Integrated Azure APIs through Python Azure SDK and Azure CLI for seamless data retrieval.
- Embedded **AJAX** in **UI** to update small portions of the web page avoiding the need to reload the entire page.
- Used **Python** and **Django** to interface with the **JQuery** UI and manage the storage and deletion of content.
- Used **Python** to write data into **JSON** files for testing **Django** Websites. Created scripts for data modeling and data import and export.
- Analyzed the **SQL** scripts and designed solutions to implement using **pyspark**. Created custom new columns depending up on the use case while ingesting the data using **pyspark**.
- Wrote and executed various **MYSQL** database queries from **Python** using **Python-MySQL** connector and **MySQL DB** package.
- Involved in doing **AGILE (SCRUM)** practices and planning of sprint attending daily agile (SCRUM) meetings and SPRINT retrospective meetings to produce quality deliverables within time.
- Excellent analytical and problem-solving skills and ability to work on own besides being valuable and contributing team player.
- Demonstrate proficiency in working with **SOAP** and **REST APIs**, leveraging microservices design principles to create scalable and interoperable solutions.

Environment: Python, Django, MVT, Numpy, Matplotlib, TDD, DOM, XML, HTML5, CSS3, JavaScript, PySpark, AWS, Pandas, AJAX, JQuery, JSON, REST, MySQL, Agile and Windows.

Client: Verizon, Irving, TX.

Aug 2021 – March 2024

Role: Python Developer

Responsibilities:

- Involved in extensive meetings with business and design teams in analyzing/drafting **Business Requirement Specification (BRS)** and **Software Requirements Specification (SRS)**.
- Implemented **MVT** architecture and built back-end for Web Applications using **Python Django** Framework and **MySQL**.
- Developed dynamic web pages using **python Django** frameworks and Used **Django** APIs for database access.
- Built various graphs for business decision making using **Python Matplotlib** library and **NumPy** for Numerical analysis.
 - Designed and developed the **UI** of the website using **HTML5, AJAX, CSS3 and JavaScript**.
- Applied **REST API** development via **Django REST** Framework model to develop an information management system.
- Responsible for setting up **Python REST API** framework using **Django** and developed Merge jobs in **Python** to extract and load data into **MySQL** database.
- Utilized **PyUnit**, the **Python Unit** test framework, for all Python applications and used **Django** Database API's to access database objects.
- Implemented **AWS** solutions using **E2C, S3, RDS, EBS, Elastic Load Balancer, and Auto scaling groups, Optimized volumes and EC2** instances.
- Written scripts using **python** modules and its libraries to develop programs that improve processing of access requests.
- Successfully integrated **Azure APIs** and Python backend, establishing real-time data updates, and enhancing data accuracy and timeliness.
- Created **Django** Forms for database models and implemented **Django** views to display form details.
- Created **Django** dashboard with custom look and feel for end user has been created after a careful study of the **Django** admin site and dashboard.
- Developed and maintained an optimized dimensional data model, significantly improving query performance and enabling comprehensive reporting and analysis capabilities.
- Used **Pandas API** to put the data as time series and tabular format for fast timestamp data manipulation and retrieval.
- Used Collections in **Python** for manipulating and looping through different user-defined objects.
- Used **Django** configuration to manage **URLs** and application parameters.
- Created **Python** REST API with **Django** Rest Framework.
- Used **JQuery** and **AJAX** calls for transmitting **JSON** data objects between frontend and controllers.
- Performed database operations and queries using **MySQL**.
- Followed **AGILE** development methodology to develop the application.
- Participated in weekly release meetings with Technology stakeholders to identify and mitigate potential risks associated with the releases.

Environment: Python, Django, MVT, Numpy, Matplotlib, PySpark, PyUnit, AWS, Pandas, HTML5, CSS3, JavaScript, AWS, AJAX, JQuery, JSON, REST, MySQL, Agile and Windows.

Client: Encompass Health, Birmingham, AL

Jun 2020 – May 2021

Role: Python Developer

Responsibilities:

- Analyzed the business requirements and created use cases and prepared low and high-level design documents.
- Developed a portal to manage entities in a content management system using **Django**.
- Designed and developed data management system using **MySQL**.
- Built various graphs for business decision making using **Python library**.
- Involved in development of **Python APIs** to dump the array structures in the Processor at the failure point for **debugging**.
- Implemented responsive user interface and standards throughout the development and maintenance of the website using the **HTML5, CSS3, JavaScript, JQuery**
- Created a **Python/Django** based web application using Python scripting for data processing, **MySQL** for the database, and **HTM5/CSS3/JQuery** and **HighCharts, Matplotlib** for data visualization of sales, tracking progress, identifying trends.
- Used the Python's modules **Numpy, Matplotlib**, etc. for generating complex graphical data, creation of histograms etc.
- Used **Python** and **Django** creating graphics, **XML** processing, data exchange and business logic implementation.
- Created script in **python** for calling **REST APIs**.
- Used **Django** Rest Framework to create a **RESTful API** endpoint using View sets, Routers and regular expression-based routing with **MySQL** Workbench.

- Parse **JSON** and **XML** data using **Python**.
- Wrote python raw **SQL queries** to **Django** database agnostic for **MySQL** and **Oracle** database.

Environment: Python, Django, Numpy, Matplotlib, AWS, HTML5, CSS3, JavaScript, XML, AJAX, JQuery, JSON, RESTful, MySQL, Agile and Windows.
