

Anshi Ajay Rai

E: anshirai1199@gmail.com

P: +1 832-900-0871

<https://www.linkedin.com/in/anshi-rai-914947154/>

EXPERIENCE SUMMARY:

- Professional **Java/J2EE Software Developer with 5+ years of experience** in **Analysis, Design, Development, Testing and Implementation** of applications on **Java/J2EE** technologies.
- Experience in all phases of the **Software Development Life Cycle (SDLC)**, which includes Integration, Implementation, Interaction, Business Analysis/Modeling, Documentation, and Testing of all software applications.
- Expertise in developing enterprise applications with various open-source frameworks like **Java/J2EE, JSP, JSTL, Servlets, Spring Boot, Spring MVC, JPA, JDBC and Hibernate**
- Extensive knowledge in **Agile Methodologies** and **Waterfall** model.
- Expertise in programming with **Hibernate Framework, Hibernate Configuration, Object Relation Mapping (ORM)**
- Certified **Java** Production Support specialist who is proficient in all of the past and current versions of Java applications.
- Expertise in **RDBMS, JDBC, Oracle** and **SQL** Server including **SQL/PLSQL, Stored Procedures** and **TOAD**.
- Experience using build tools like **Maven** and **CICD** tools like **Jenkins**.
- Experienced in designing, developing, and deploying **J2EE** applications on **WebSphere, WebLogic, Apache Tomcat** and **JBoss Servers**.
- Expertise In design and development of various web and enterprise applications using Type safe technologies like **Scala, Akka** and **Play** framework.
- Solved software design issues by applying design patterns including **Singleton Pattern, Business Delegator Pattern, Controller Pattern, MVC Pattern, Factory Pattern, Abstract Factory Pattern, DAO Pattern** and **Template Pattern**
- Good experience in creating the **IAM Service: IAM Policies, Roles, Users, Groups** and service accounts thru **Terraform Scripts**.
- Good experience in **DevOps** tools such as **Chef, Vagrant, Virtual box, Puppet, Ansible, Jenkins, Maven, ANT, SVN, Git** and **Docker**.
- Created Single Page Applications by utilizing **Angular version 6,7 & 10**.
- Strong experience with **MongoDB** development (reports, schema design, map reduce functions) and migrations from **SQL** relational databases to **NoSQL** databases like **MongoDB, Cassandra** and **Couch DB**.
- Diverse experience utilizing tools in **Microservices** architecture applications using **Spring Boot, Spring Cloud, Pivotal Cloud Foundry, AWS, Rabbit MQ, Kafka, Cassandra, My SQL, Restful Web Services**.
- Hands-on experience in deploying web and **J2EE** enterprise applications on **WebLogic, WebSphere, Tomcat, Enterprise Service Bus (ESB)** and **JBoss** server.
- Worked on **AWS**, High Availability Practices and deploying backup/restore infrastructure.
- Experience in **Spring framework** extensively used **Spring DI, Spring Batch, Spring AOP, Spring JDBC templates, Multithreading** and in working with **SOAP & RESTful Web Services**.
- Experience in creating various **Docker** images from the **Docker** containers and published these images in the **Docker** hub repository.
- Experience with configuration management tools like **Ansible** and **Packer** and automated the cloud deployments using **terraform**.
- Developed **CI/CD** system with **Jenkins** on **Kubernetes** environment, utilized **Kubernetes** and **Docker** for the runtime environment for the **CI/CD** system to **Build, Test and Deploy**.

- Strong development experience creating rich frontend **UI** in **AJAX, JSF, JavaScript** technologies using **JavaScript** libraries like **jQuery, Angular, NodeJS**.
- Deployed **Spring Boot** based **Microservices** and **Amazon EC2** container using **AWS** admin console.
- Experience in software versioning and revision control systems such as **Git, SVN, and Clear Case**.
- Strong Logical and Analytical Reasoning Skills, Excellent Management skills, Excellent Communication with good Listening, Presentation Skills.

TECHNICAL EXPERTISE:

Languages	Java 11/8.0/7.0/6.0/5.0, J2EE, SQL, Python, PL/SQL, UML, C, C++
J2EE Web Services	Collections, Data Structures, Algorithms, Executor Framework, Multithreading, Class Loading, SOAP, REST, WSDL, JAX-RS, JAX-RPC, JAXP, JAXB.
Web Technologies:	HTML/HTML5, CSS/CSS3, XML, XSLT, JavaScript, AJAX, JQuery, JSON
JavaScript Frameworks	Angular 10, Angular 12
JavaScript Libraries	Bootstrap, Node JS, Typescript, SASS.
JavaScript Testing Libraries	Mocha, Jasmine.
Frameworks	Spring, Apache, Log4J.
Database	Oracle 11g/10g, DB2, MySQL, Cassandra, MongoDB.
Web and Application Servers	Apache Tomcat, IBM WebSphere, JBoss, WebLogic.
Design Patterns	Singleton, Front Controller, DAO, AOP, MVC, Factory Method
Methodologies	SDLC, Agile
Operating Systems	Windows, Mac OS X, Linux, Unix.
Cloud Platforms	AWS, Pivotal Cloud Foundry (PCF), GCP, EC2, EBS, S3, ECS, API Gateway.
Build Tools	JUnit, SoapUI, ANT, MAVEN, Gradle, Putty, CI/CD, PCF, Rational Clear Quest, Azure, Mockito, Fitness, Kubernetes, Load UI, Groovy Spock, Docker, Jenkins
Tools	Junit, Eclipse, Adobe page maker, MS Office, Putty,

PROFESSIONAL EXPERIENCE

Client: US Bank, Portland - OR
Full Stack Java Developer

Aug 2022 - Present

Responsibilities:

- Gathered and clarified requirements with business analyst to feed into high-level customization design, development, and installation phases.
- Developed **Rest-API** using **SPRING BOOT**.

- Provided full DevOps, environment & build support to both Waterfall & Agile/ SCRUM teams.
- Responsible for development of web page using **HTML, JavaScript, jQuery, React.js, Immutable JS, CSS, SASS/SCSS** including Ajax controls and **JSON**.
- Created service accounts using Terraform with the respective roles to support the services deployed Managing the **GCP TechStack**
- Developed the **terraform** script to get the certificates from the bucket and create an SSL cert in the respective project on the fly without downloading the certs on the local machine.
- Developed **Splunk** reports that provide a high level overview of the Application Health.
- Created tasks for updating tsconfig tracked files based on glob, tslinting and compiling typescript files
- Implemented **AWS SNS** for automated notification applications for monitoring and diagnosing hardware components pairing with **AWS SQS** for decoupling purposes in case of downtime.
- Migrating the existing project to Microsoft **Azure** with Azure services.
- Worked on SMTP Server setup for customers using ansible and terraform.
- Created the **Node.js** EXPRESS Server combined with Socket.io to build **MVC** framework from front-end side **AngularJS** to back-end **MongoDB**, in order to provide broadcast service as well chatting service.
- Designed and developed **Micro Services** business components and **RESTful** service endpoints using **Spring boot**.
- Developed **API** for using **AWS Lambda** to manage the servers and Typescript run the code in **AWS**.
- Designed mass-scale **ETL** application with **AWS Glue, S3** and **DynamoDB** with **AWS CDK**.
- Used Azure Resource Manager (ARM) to deploy, update, or delete all the resources for your solution in a single, coordinated operation.
- Started the front-end application with **React** and used state object **React** Class component for general stateful management.
- Improved overall site performance using catchpoint portal, Akamai Header and **Dynatrace**
- Created smart navbar system, in typescript that would retain a client context across multiple web apps using the query string. Smart nav would automatically determine selected navigation node using the browser URL.
- Unique experience with Pivotal Cloud Foundry and Open Shift/Kubernetes architecture and design, troubleshooting issues with platform components (PC), and developing global/multi-regional deployment models and patterns for large scale developments/deployments on Cloud Foundry and OpenShift/Kubernetes.
- Worked on **SDLC** all phases of application development to implement the assigned use cases successfully.
- Developed of presentation layer using **JSP's, HTML, CSS, JavaScript, jQuery** and **Angular 10**.
- Designed and Developed the **UI** screens using **JavaScript, Angular 10, CSS3** and **HTML5**.
- Used **Splunk** for the engineering dashboards used by the developers for easy track of application health.
- Worked in React JS for creating interactive UI's using **One-way data flow, Virtual DOM, JSX, React** concepts.
- Provided on-time and extensive support for production issues and any clarification, issues faced by the Team.
- Developed **Splunk** reports that provide a high-level overview of the Application Health.
- Kafka integration with **Spark** using **Spark Streaming API**.
- Created different Terraform modules as part of foundation (MIG, CloudSQL, GLB, ILB, Instance, Template)
- Designed and developed **Micro Services** business components and **RESTful** service endpoints using **Spring boot**.
- Responsible for design of **WSDL** files and schema changes and hosting using **SOAP** based **Web Services Axis2** and **XML Beans**.
- Microservices were being used as a strategy to gradually replace a core monolithic application while still adding business features.
- Built **React** application utilizing Redux for state management.
- Used **Rest angular** in **Angular10** service to make **GET/POST/PUT/DELETE** to deal with **API** request and response from **Angular** to send the request and get the response.
- Created release branches in **GITFLOW** by **GIT** administration including branching, reporting and assisting with project and end user support.
- Experience in moving data from different sources using **Kafka** producers, consumers and preprocess data using **Storm** topologies.
- Implementation of different exporters to get metrics of the Openshift components and servers.

- Worked on **Java 8** with **lambda**, **groovy**, **spring** and **spring boot**.
- Used the **Kubernetes** commands for creating the Auto scaling for platform service OpenShift.
- Get the error report and analyze the defects and also categorize the defects. Using the Splunk tool.
- Used **Java 8** fundamentals like parallel streams and filters through **lambda** expressions to handle searching.
- Experience in creating **JavaScript** for using **DML** operation with **MongoDB**.
- Creation and configuration of dashboards and graphs based on Prometheus information to show the current status of Openshift components, containers, pods, quotas, etc.
- Implemented the authentication and authorization of the application using **Spring Security** and **Oauth2**.
- Implemented Multithreading, Concurrency, Exception Handling, and Collections whenever necessary.
- Prepared calls through Hibernate and Spring **JDBC** for Interacting with the Database.
- Deployed Java applications in Docker containers to **AWS** machine images.
- Strong participation in production support and enhancements.
- Support our application platforms in both production and the non-production test environments.
- Performed data extraction and loading the **JSON** data with the server-side content into the **Mongo DB**.
- Involved to write custom Directives, Controllers and services Using **Angular**.
- Involved in creation of logs using **Log4J** for error tracking
- Used **Maven** build tool for build process
- Utilized Docker Images/ containers and kubernetes.
- Worked with modules like **MongoDB (NoSQL)** for database persistence using **Node.js** to interact with mongo db.
- Datacenter migration to **Amazon Web Services (AWS)** infrastructure and provided initial support to Applications and Database teams.
- Created **Microservices** as part **Lambda** function development using **Node JS** server-less architecture.
- Create **AWS** instances via **Jenkins** with **EC2** plugin and integrated nodes in Chef via knife command line utility.
- Involved in **Agile Methodology** process, which includes 2 week's, sprints, and daily Scrum to discuss the design and work progress.

Environment:

Agile, Java/J2EE, Angular 10, Splunk, HTML5, JIRA, XML, CSS3, JavaScript, XHTML, AJAX, Spring MVC, Spring Boot, Hibernate, Oracle, Spark, Kafka, MongoDB, JMS, REST Web Services, AWS, Microservices, Log4j, Servlets, JUnit, ANT, GIT and Windows.

Client: Tenet Healthcare – Dallas, TX

Java Developer

Jan 2021 – July 2022

Responsibilities:

- Responsible for requirements gathering, analysis and design. Involved in development and testing of the complete business solution.
- Designed and developed **UI** screens using **Angular**, **HTML5**, **CSS3**, **JavaScript**, **JSON** and **AJAX**.
- Developed custom **Angular** directives to build custom reusable components to use across the application pages.
- Designed serverless microservices **ETL** application with **AWS Lambda** and **S3** using **AWS CDK**.
- Used **Spring** framework including **Spring Beans**, **Spring AOP** and **Spring Boot**.
- Used **Spring Beans** to encapsulate business logic and Implemented Application **MVC** Architecture using **Spring MVC**.
- Implemented Swagger Configuration in **Java Spring boot** for auto generating swagger **json** files for **REST API** calls.
- Installation, configuration of Openshift components to enable monitoring, cluster metrics components like hawkular- cassandra, hawkular-metrics, heapster.

- Developed microservice on boarding tools and Jenkins allowing for easy creation and maintenance of build jobs and Kubernetes deploy and services.
- Leveraged **Splunk** to design and implement **Splunk** knowledge Objects to include: Reports, Dashboards Alerts for compliance and security monitoring.
- Troubleshooting Openshift router operation, analyzing stats with different projects to determine the bottleneck.
- Used **React-router** to route the pages on the client-side and built SPA.
- Having experience in developing a data pipeline using **Kafka** to store data.
- Developed the terraform script to get the certificates from the bucket and create an SSL cert in the respective project on the fly without downloading the certs on the local machine.
- Analyzed the **Node.js** server structure in legacy project, then mimicked the **REST** service by using Java **JAX-WS** API and did the corresponding configurations.
- Configured Glue crawler for automate data-crawling for input S3 bucket.
- Significant contribution to improving the performance of IEEE Xplore that has millions of hits a day and hundreds of thousands of document downloads a month, used Dynatrace to troubleshoot and monitor applications.
- Used React-Router to create a single page application. Applied Router Guard to deny unauthorized access
- Developed server-side application to interact with database using **Spring Boot** and **Hibernate**.
- Developed Data Ingestion application to bring data from source system to HBase using **Spark Streaming**, **Kafka**.
- Continuous support during **UAT** and **Production**.
- Creation and Follow-up of RedHat Cases to solve problems/bugs with the Openshift Platform or OS.
- GUI was built using HTML, Typescript, NGRX, Bootstrap, CSS3, Angular-Material to design, construct and bundle the application using Angular CLI.
- Developed user interface by using the **React JS**, Flux/Redux for SPA development.
- Converted a monolithic app to **microservices** architecture using **Spring Boot** using 12 factor app methodology. Deployed, Scaled, Configured, wrote manifest file for various **Microservices** in **PCF**.
- Designed various tables required for the project in **Oracle** database and involved in coding the **SQL Queries**, Stored Procedures and Triggers in the application.
- Designed and developed **restful API** and services using best practices to interact within the **Microservices** and with the front end.
- Software deployment support in staging and production environments.
- Skilled in leading frameworks as **React.JS** to build high quality, scalable and reusable components and front-end solution.
- Participated in the Continuous Delivery process to support building of **Docker** Images
- Developed components of **REST web services** end to end, using different Annotations.
- Developed complex service components for **Data Access Layer**, **DAO** classes to interact with backend using **Java** and **Hibernate Framework**.
- Coordinated with engineering teams to assess and optimize **Splunk** data.
- Developed the automated unit test cases for the Microservices using **JUnit**, **Mockito**, and **Sonar** and deployed them in the **Jenkins** pipeline.
- Researched solution for container orchestration using **Kubernetes**.
- Taking tread and heap dumps during production issues, analyzing them and identify the faulty piece of code.
- Having good experience with **Java** design patterns like front controller, **Singleton** objects.
- Create Internal and External services, Entity services and handlers.
- Wrote **SQL** queries and **PL/SQL** – Stored procedures, functions, triggers, cursors, sequences, and indexes, which are going to be invoked by Batch processes.
- Unit and integration test cases are being designed and developed using **JUnit**.
- Worked with **QA** team to resolve the defects as part of the **Sprint** tasks.
- Worked on deploying war files to WebSphere server through administrative console.

Environment:

Java/J2EE, Agile, Scrum, Angular 10, HTML, CSS, JavaScript, XML, AJAX, Spring Boot, Spring ORM, Hibernate, Spark, Oracle, Kafka, MongoDB, Servlets, Microservice, PCF, Tomcat, Log4j, Junit, REST, JSON, Eclipse IDE, GIT, Maven and Windows.

Client: Key Bank - Dallas, TX

Java/J2EE Developer

May 2019 - Dec 2020

Responsibilities:

- Designed and developed the **REST** based **Microservices** using the **Spring Boot** and **Spring Cloud**.
- Developed **API** for using **AWS Lambda** to manage the Serverless architecture and run the code in **AWS**.
- Analyzed web applications, documented detailed **Test plans**, **Test cases** and expected results based on the business functional requirements.
- Designed the responsive front-end screens using Angular, HTML, CSS3, JavaScript, Typescript, jQuery and bootstrap.
- Performed Splunk administration and analytics development on Information Security, Infrastructure, network logs.
- Developed **React** components to implement various feature specific modules in the application and worked with a team to move existing web apps to **React** with **ES6** features.
- Wrote Test cases using **JUnit** framework to validate the application flows in different scenarios and implement the logging mechanism using **Log4j** framework.
- Involved in developing components for Member Portal Applications using Java, UI technologies such as **HTML**, **CSS**, **JavaScript**, **Typescript**, **Angular** components.
- Used **Spring Core** Annotations for Dependency Injection and used **Apache Camel** to integrate **Spring framework**.
- Involved in implementing **logging**, exception handling and transaction management using **spring AOP**.
- Utilize **Camel** to integrate **Microservices** with other **Microservices** and **RabbitMQ** messaging exchanges. Developed Scripts for **AWS Orchestration**.
- Used **AJAX** to make asynchronous calls to the framework which formatted the request (basically **JSON** data) using the **JSON** to **Java** Transformer mechanism inbuilt into the framework.
- Implemented **REST API** over **Node JS** and **Express.JS** in JavaScript and consumed them to the frontend using **Angular** HTTP service.
- Implemented business tier using **Spring IOC**, **AOP** and **MVC**.
- Written **SQL** queries, **PL/SQL** stored procedures, modifications to existing database structure as required per addition of new features.
- Used **JDBC API** to establish connection between **Java** and **Database**.

Environment:

Java, J2EE, Python, JDK, Spring Framework, Spring Boot, Microservices, Hibernate, RESTful Web Services, HTML, CSS, AJAX, JavaScript, Angular JS, JSON, XML, Kafka, Agile Methodology, Eclipse IDE, JMS, Junit, Maven, GIT, Log4j, Web Logic, Mockito, Microsoft SQL Server.

EDUCATION DETAILS:

University of Texas, Arlington, TX

Master's in Information System

CERTIFICATIONS:

- AWS Solutions Architect Associate
- Oracle Java SE 11 Certified Professional Developer
