

Anusha D
Data Analyst
Mobile: (401)-702-7330
Email: anusha.7ad@gmail.com

PROFESSIONAL SUMMARY

Analytical and meticulous Over four years of experience as a data analyst in the financial and medical fields, turning complicated data into understandable, useful insights. I use my problem-solving approach and solid technical knowledge of SQL, Python, R, and AWS to create dashboards, automate processes, and spot trends that inform strategic choices. To enhance customer experiences, maximize performance, and assist organizations in making informed decisions, I value teamwork and curiosity in tying data to practical results.

TECHNICAL SKILLS

Programming & Scripting	Python (Pandas, NumPy, scikit-learn), R, SQL, T-SQL, PL/SQL
BI & Visualization & Reporting	Power BI (DAX, Power Query, Dataflows, RLS), Looker, Tableau, QlikView, SSRS, Excel (Power Query, Pivot Tables, Power Pivot), Oracle APEX, R Shiny
ETL & Data Integration	Azure Data Factory (ADF), SSIS, Kafka, AWS Glue, Spark SQL, Dataflows
Databases & Warehousing	SQL Server (2014/2016/2019), Azure SQL Database, PostgreSQL, Snowflake, Teradata, AWS Redshift, Google Big Query
Cloud Platforms	Microsoft Azure, AWS (S3, Glue, Redshift), Google Cloud Platform (GCP)
Automation & Workflow Tools	Power Automate, Git, TFS, Visual Studio, SharePoint, Confluence
Data Analysis & Modeling	Data Cleaning, Data Profiling, Statistical Analysis, Forecasting, Clustering, A/B Testing, Predictive Modeling, Data Modeling (Star/Snowflake Schemas)
Data Governance & Quality	Data Validation, Data Lineage, Documentation, RLS Implementation, Compliance Standards
Project & Collaboration Tools	Microsoft Teams, Jira, SharePoint, GitHub, Confluence
Operating Systems	Windows, Linux

PROFESSIONAL EXPERIENCE

- Data Analyst- EXL, Jersey City, NJ(Oct 2024-Present)
- Large and intricate datasets from AWS, Azure, and on-premises SQL Server were analyzed to find patterns, spot opportunities, and provide insights that helped inform strategic choices.
 - Designed, created, and managed interactive Power BI dashboards that assisted business teams in tracking performance metrics and KPIs. These dashboards featured drill-down capabilities, real-time data connections, and user-friendly visuals.

- To facilitate forecasting, executive-level financial reporting, and advanced analytics, more than 100 DAX measures and calculated columns were developed.
- To provide integrated and cloud-first business intelligence solutions, Power BI was connected to a variety of data sources, such as Azure SQL Database, Azure Data Lake, SharePoint, Snowflake, and PostgreSQL.
- Created and kept up LookML data models and explores that could grow to include financial and operational metrics from Power BI and Looker.
- Created and set up interactive Looker dashboards that worked with Snowflake, Azure SQL Database, and BigQuery to give executives real-time information for financial reporting, forecasting, and performance tracking that worked well with Power BI solutions that were already in place.
- Power Automate and Power BI Subscriptions were used to automate recurring reports and data refreshes, improving reporting timeliness and accuracy while saving over thirty hours per month.
- To guarantee reliable, safe, and compliant data access, reusable Power BI Dataflows were constructed, and best practices for governance and Row-Level Security (RLS) were put into place.
- To guarantee the completeness, accuracy, and dependability of datasets used for reporting and analytics, extensive data profiling and quality checks were carried out.
- To clean, transform, and aggregate data from various systems into datasets that are ready for analytics, I wrote and optimized SQL and T-SQL queries.
- To enhance report performance and scalability across Power BI and SQL Server, data models (fact and dimension tables) were designed and documented.
- Collaborated with the finance, operations, and compliance departments to convert business requirements into self-service dashboards, KPIs, and actionable metrics that enhanced data-driven decision-making.
- Supported projects like fraud detection and supply chain management by using Python (Pandas, NumPy, and scikit-learn) for sophisticated data analysis, automation, and predictive modeling.
- Worked with data engineering teams to design ETL pipelines with Azure Data Factory, SSIS, and Kafka, guaranteeing data accessibility and dependability for analytics use cases.
- By evaluating data to gauge the effects of process and product enhancements, I assisted A/B testing and experimental design.
- Insights were communicated through captivating visual storytelling, making it simple for stakeholders who are not technical to understand complex data findings.
- Oversaw Power BI documentation and training initiatives, encouraging a self-service analytics culture among teams and boosting data tool adoption.
- **Technical Environment:** SQL Server, Azure, AWS, Python, SSIS, Azure Data Factory, Snowflake, Tableau, SharePoint, Power Automate, Excel, Spark SQL, Power BI, Looker, DAX, and Power Query

Data Analyst -Tata Consultancy Services Pvt Ltd, India

(Jan 2022– Dec 2023)

- To guarantee data accuracy and dependability for reporting and analysis, large healthcare datasets were cleaned, transformed, and preprocessed.
- Using SQL, PL/SQL, and SSRS, I created daily, monthly, and ad hoc reports that offered useful information on patient care, claims, and operational KPIs.
- Developed and maintained interactive Tableau, Power BI, and QlikView dashboards that tracked KPIs and trends to help make data-driven decisions.
- Enhanced reporting efficiency through statistical analysis, data mining (clustering, decision trees), and automated recurring analysis workflows using R, Python, and Oracle APEX/R Shiny.
- Oversaw Teradata, SAS, and Excel (Power Query, Pivot Tables) for advanced analysis, data aggregation, and validation.
- Conducted trend, variance, and anomaly analysis on operational data and claims to aid in strategic decision-making and process enhancement.

- Worked together with stakeholders to ensure alignment with healthcare compliance standards while converting business requirements into reports, dashboards, and KPI solutions.
- Maintained workflows for data governance, documentation, and reporting, guaranteeing openness and uniformity throughout analytical projects.
- **Technical Environment:** SQL, PL/SQL, SSRS, Tableau, Power BI, QlikView, Excel, Python, R, Oracle APEX, Teradata, and SAS.

SQL Analyst – Accenture, India

(Feb 2021- Dec 2021)

- To extract, transform, and validate data across several relational databases, sophisticated SQL queries, joins, views, stored procedures, and user-defined functions were created and optimized.
- To ensure high data quality for reporting, ETL workflows were designed and maintained to transfer and integrate data from OLTP to OLAP systems.
- Using Power BI and Tableau, I created and updated interactive dashboards and reports with drill-down capabilities and KPI tracking to aid in business decision-making.
- Scheduled jobs, database monitoring, and automated report refreshes to boost efficiency and cut down on downtime.
- Using Confluence, Microsoft Word, and SharePoint for teamwork, I documented and maintained data models, business rules, and reporting procedures.
- To collect requirements, convert business needs into data models, and provide actionable insights, I worked with cross-functional teams.
- Using Git and TFS, I oversaw the version control of SQL scripts and reports.
- **Technical Environment:** Power BI, Tableau, Excel (Power Query, Pivot Tables), Git, TFS, Visual Studio, SharePoint, and SQL Server (2014, 2016, and 2019).

PROJECTS

- **Airbnb Data Visualization (Tableau):** To examine Airbnb listings, an interactive Tableau dashboard was created, with an emphasis on pricing patterns by number of bedrooms, local zip codes, and seasonal income.

Technical Environment: Python, Tableau, Excel, and SQL

- **Bank Loan Report Analysis (Power BI):** Using data modeling, DAX, and visualization techniques, an interactive Power BI dashboard was created to analyze over 38,000 loan applications. This allowed for the tracking of key performance indicators (KPIs), the discovery of risk patterns, and the delivery of actionable insights that aided in more intelligent financial decision-making.

Technical Environment: Excel, Python, SQL, DAX, and Power BI

EDUCATION:

- MS in Information Technology Management -St. Francis College, Brooklyn, New York
- Bachelors in Computer Science- Rajiv Gandhi University, India
