

Eligible to work in the U.S. for any employer without visa sponsorship.

Professional Summary:

Software Engineer with **3 years of experience** in developing and maintaining **scalable distributed software applications**. Strong **problem-solving skills** with a focus on driving high-throughput, low-latency scalable solutions. Experienced in communicating **technical ideas clearly**, and delivering **high-quality solutions**. Passionate about **learning new technologies** and contributing to **impactful engineering projects**.

Skills:

Development & Data: Java, Kafka, GC Analysis, Ipv6, Json, AWS, Oracle Cloud.

Infrastructure & Operations: Terraform, Git, Jira, Linux, Cloud, Alfred, Prompt engineering

Work Experience:**Software Engineer - Cognizant****July 2021 to Oct 2024**

- **Metric Ingestion:** Implemented a fault-tolerant, non-blocking I/O service capable of ingesting **150K requests/sec**, delivering high throughput and low latency.
- **Secure Metrics Ingestion:** Implemented a lightweight **mTLS authentication** API to support secure metrics ingestion, ensuring proper validation and seamless integration with existing services.
- **Reliability Engineering:** Implemented **load shedding and backpressure** with a dynamic runtime control via periodically refreshed config from object storage, enabling rapid incident mitigation without redeployments.
- **Metrics Infrastructure Setup:** Built and maintained **end-to-end infrastructure** for a large-scale metrics ingestion service, ensuring high availability, scalability, and fault tolerance.
- **System Performance Optimization:** Improved system performance and reduced latency by analyzing **JVM behavior through GC logs**, Java Flight Recorder (JFR), thread dumps, and heap histograms.
- **Terraform Infrastructure Automation:** Gained hands-on experience with Terraform by building and maintaining infrastructure for large-scale metrics ingestion systems, including compute, networking, and storage components.
- **Asynchronous Processing:** Implemented asynchronous and concurrent execution using Java CompletableFuture to parallelize metric ingestion significantly improving throughput and reducing end-to-end latency by **75%**.
- **On-Call Ownership:** Served as the on-call engineer for critical metrics ingestion, troubleshooting **high-severity production issues**, performing root cause analysis, and ensuring system stability and uptime during incidents.
- **Network & Security Setup:** Configured VPCs, subnets, IAM roles, and security groups to establish secure and compliant connectivity between on-premise and cloud systems.
- **Security & Compliance Awareness:** Strengthened knowledge in cloud security, identity management, and compliance frameworks through **certification training**.
- **Improved Data Throughput:** Reduced metrics ingestion latency by **60%** through optimized Kafka producer tuning, balancing batch efficiency and buffer retention to prevent cluster saturation.

Certifications:**AWS Certified Solutions Architect – Associate (SAA-C03) - [Certificate Badge](#)****Feb 2025 to Aug 2025****Education:****Bachelor of Technology - KL University - GPA 3.8****July 2017 - May 2021**
