SUMMARY

Security Software Engineer passionate about cloud security, incident response, and secure software development. Seeking opportunities to build scalable security solutions in dynamic environments.

EXPERIENCE

Software Developer Intern, SiAnth Inc Sep 2024 – Present

- Achieved 30% improvement in data processing by developing responsive web applications in React and NodeJS.
- Improved user experience by working with cross-functional teams to design and implement back-end services.

Graduate Assistant, Oregon State University Sep 2022 – Jun 2024

- Simplified complex security concepts by teaching 300+ students in Cryptography and Web Security courses.
- Mentored 60+ students on cloud-focused Capstone projects by providing code reviews and technical guidance.
- Led cybersecurity workshops for 100+ students, covering network security, cryptography, and digital forensics.

Security Operations Analyst, ORTSOC Sep 2022 – Jun 2023

- Streamlined incident response workflows by standardizing procedures and applying lean principles.
- Developed ELK Stack dashboards that reduced threat detection time by 40% by correlating Suricata alerts, Zeek logs, and endpoint telemetry for real-time SOC monitoring.
- Conducted 50+ vulnerability assessments, identifying and remediating critical risks like misconfigured access controls and outdated software.

Software Engineer, Igmite Solutions Pvt. Ltd. Jul 2021 – Aug 2022

- Increased system efficiency by 20% by designing and developing secure RESTful APIs using C# and Express.
- Delivered clear and concise documentation and presentations for both technical and non-technical stakeholders.

TECHNICAL SKILLS

Programming Languages: C#, Java, Python, JavaScript, React

Tools/Platforms: Splunk, ELK Stack, Nessus, OpenVAS, Suricata, AWS, Azure, MISP, OTX, Docker, VMWare, SOAR (Palo Alto XSOAR, Microsoft Sentinel), Autopsy, Bash, Powershell

Frameworks: NIST 800-171, CIS Controls v8, MITRE ATT&CK, ISO/IEC 27001, Cyber Kill Chain

ACADEMIC PROJECTS

Masters Research Project Apr 2023 – Jun 2024

Title: Measuring Effectiveness of Spatial Propagation Attacks in Swarm Control Algorithms

- Enhanced drone navigation resilience by 30% through innovative GPS spoofing simulation attacks on drones.

Retention Policies for Indicators of Compromise Aug 2023 – Mar 2024

- Developed 10+ retention policies for IP reputation, domain blacklists, and malware hashes, improving SOC incident response efficiency and threat intelligence tracking.

Infrastructure Hardening Project Jan 2024 – Mar 2024

- Secured Linux/Windows systems using CIS/NIST benchmarks and mitigated privilege escalation risks.
- Leveraged MITRE ATT&CK techniques and Cyber Kill Chain framework to defend against Red Team attacks.

PUBLICATIONS

Detection of Phishing Websites using Machine Learning

International Journal of Engineering Research & Technology, Vol. 10 Issue 5, May 2021

Contribution: Achieved 97% accuracy in phishing detection by analyzing 30+ features, including URL length, domain age, and SSL status, to effectively distinguish phishing sites from legitimate ones.

EXTRA-CURRICULAR & VOLUNTEERING

- **Cybersecurity Volunteer** – CyberWeek 2025 (Microsoft, GitHub, UW)
- **ISSA Portland Chapter** – Active member and volunteer in local cybersecurity events.
- **Black Hills Information Security (BHIS)** - Certificate of Participation in SOC Core Skills Training
- **OSU Security Club Member** – Workshops on penetration testing, cloud security, and Incident Response.

EDUCATION

MS in Computer Science Sep 2022 - Jun 2024

Oregon State University GPA: 3.67/4.00

Specialization: ORTSOC, Cryptography, Digital Forensics, Enterprise Defense Security.
