
SUMMARY

Proactive and detail-oriented **Sr. Business Analyst** and **Data Analyst** with over 4 years of experience in project coordination, API development, requirements gathering, and business data analysis. Expertise in aligning technological solutions with business objectives, process optimization, and delivering actionable insights through data-driven decision-making. Proficient in advanced analytical tools like **SQL**, **Python**, and **Power BI**, with a proven ability to develop automated test cases, improve workflows, and create impactful dashboards. Strategic thinker with hands-on experience in Agile methodologies and technical process alignment. Skilled in managing cross-functional teams, resolving system interfacing issues, and delivering product enhancements. Adept in developing project documentation, test cases, and requirements through all phases of the SDLC.

PROFESSIONAL EXPERIENCE**Pachio**, *Business Data Analyst* | California, USA*December 2024 - Present*

- Designed and implemented data pipelines using Spark, SQL, and AWS to ensure seamless data migration and improve accessibility for analytical teams across departments. Automated key administrative workflows using Python and Shell scripting, reducing manual efforts by 40% and enhancing overall operational efficiency.
- Developed data warehouse solutions with optimized ETL processes, enabling faster query performance and improved data storage scalability for long-term business analytics. Created advanced dashboards using Tableau and Power BI, providing real-time monitoring of KPIs and actionable insights for key decision-making processes.
- Spearheaded governance initiatives, implementing robust policies for BI and data governance that ensured compliance with organizational standards while improving data reporting accuracy. Collaborated closely with cross-functional teams to implement data management strategies, enabling consistency and alignment in business operations.
- Conducted data cleansing and validation processes, ensuring quality data availability across reporting layers and minimizing inconsistencies.

Basey Insurance, *Data Analyst* | Texas, USA*September 2024 - December 2024*

- Engineered advanced data ingestion workflows using Azure Data Factory and PySpark to streamline data integration into Azure Data Lake Storage (ADLS). Automated complex ETL processes with Databricks, reducing processing times by 30% and ensuring consistency and reliability.
- Created dynamic dashboards in Tableau and Power BI to visualize operational trends and provide stakeholders with actionable insights for strategic decision-making. Collaborated with business users to gather and translate requirements into data models, improving usability and meeting reporting needs.
- Conducted comprehensive data audits and implemented error-handling mechanisms, maintaining high data quality and ensuring compliance with governance policies across systems.

Virtusa, *Business Analyst* | Hyderabad, India*June 2021 - December 2022*

- Developed and validated SQL and PL/SQL queries for warehouse migration, improving query efficiency and reducing response times by 40%, ensuring smooth integration and scalability of data systems while enhancing usability across teams.
- Built dynamic dashboards in Tableau and Power BI, empowering stakeholders to make informed decisions based on real-time metrics and actionable data insights. Analyzed and processed large datasets using Python and Spark, delivering impactful insights to improve operational efficiency and drive revenue growth.
- Collaborated with UI/UX teams to create intuitive interfaces and user-friendly dashboards, increasing adoption rates and improving stakeholder satisfaction by 20%.

Cognizant, *Data Analyst* | Chennai, India*Feb 2020 - May 2021*

- Developed and managed Big Data pipelines using Hadoop, Spark, and Azure, ensuring scalability and efficient processing of large datasets.
- Designed and implemented interactive dashboards in Tableau, enabling stakeholders to visualize key business metrics and improve decision-making. Built robust data integration systems to ensure seamless data flows across platforms while reducing system downtime and improving reliability.
- Conducted detailed validation and transformation of large datasets, ensuring high-quality data for analytics and reporting and improving the overall accuracy of operational insights.

TECHNICAL SKILLS**Frameworks & Libraries:** Django, Flask, FastAPI, NumPy, Pandas**Databases:** PostgreSQL, MySQL, MongoDB, SQLite**Cloud Platforms:** AWS (S3, Lambda, EC2), Google Cloud Platform**Data Analysis & Visualization:** Matplotlib, Seaborn**API Integration:** RESTful APIs, SOAP APIs, Postman, Swagger**Agile Methodologies:** Sprint planning, backlog management, user story creation**Business Analysis Tools:** JIRA, Confluence, Microsoft Visio, Lucidchart**Tools & Technologies:** MS Office (Word, Excel, PowerPoint, Visio), Tableau, SQL, Agile frameworks**Languages:** Python, Java, JavaScript, TypeScript, HTML5, CSS3, SQL**Cloud Platforms:** AWS (CloudWatch, S3, EC2, RDS, Lambda, API Gateway, IAM), Azure Cloud, Google Cloud

EDUCATION**University of Texas at Arlington, Texas***Masters of Science in Data Science***Jawaharlal Nehru Technological University***Bachelor of Technology in Electronics and Communication Engineering*
