

Akshay Pathi

HealthCare Data Analyst

apathi4321@gmail.com | 7036872665

PROFESSIONAL SUMMARY:

Healthcare Data Analyst with 6+ years of experience supporting healthcare and life sciences organizations with accurate, data-driven insights. Experienced in working with medical and pharmacy claims, EHR/EMR, clinical, and operational data to create clear reports and dashboards that support clinical, financial, and regulatory decision-making.

Strong hands-on expertise in Power BI, SQL, and data modeling, with a focus on building KPI-driven dashboards for patient outcomes, utilization, cost of care, provider performance, and compliance reporting. Skilled in ETL processes, data validation, and data quality checks, and comfortable collaborating with clinicians, claims operations, PBM, finance, and IT teams to translate business needs into easy-to-understand analytics that improve healthcare efficiency and patient care.

TECHNICAL SKILLS:

BI & Analytics Tools: Power BI (DAX, Data Modeling), Tableau, Excel, SQL Server

Programming & Query Languages: SQL, Python, R, DAX, SAS

Databases & Data Platforms: SQL Server, PostgreSQL, Azure SQL, AWS

Data Engineering & Processing: ETL, Data Cleansing, Data Validation, Data Quality, Incremental Refresh

Healthcare Domain Expertise: Rx Claims, PBM, PCPF, M3P, HPMS, CMS, Healthcare KPIs

Analytics & Reporting: KPI Reporting, Clinical & Financial Analytics, Predictive Analysis, Trend Analysis

Data Modeling & Visualization: Star & Snowflake Schema, Semantic Models, Dashboards, Visualization Best Practices

Compliance & Governance: Healthcare Compliance, Audit Reporting, Data Governance, Documentation

PROFESSIONAL EXPERIENCE:

Humana | Healthcare Data Analyst | TX, USA

Feb 2025 – Present

Project: Claims Processing System

- Analyzed large healthcare claims and operational datasets to support claims processing, utilization management, cost analysis, and regulatory reporting.
- Developed and maintained interactive Power BI dashboards and reports using efficient data models and DAX to track clinical, financial, and operational KPIs.
- Performed data validation, reconciliation, and quality checks across multiple databases (SQL Server, Azure SQL, AWS) to ensure accurate and reliable reporting.
- Wrote and optimized advanced SQL queries (joins, CTEs, window functions) to extract, transform, and validate data from SQL Server and cloud databases.
- Analyzed Rx claims and PBM-related data to support cost containment, utilization review, and healthcare KPI reporting aligned with CMS and internal standards.
- Applied star and snowflake data models and semantic layers to improve dashboard performance, data consistency, and usability across reporting teams.
- Designed and supported ETL workflows, including data cleansing, transformation, validation, and incremental refresh, to improve data quality and consistency.

- Performed trend analysis and utilization analysis to identify cost drivers, performance gaps, and opportunities for operational improvement.
- Collaborated with business, operations, compliance, and IT teams to gather requirements and translate business rules into actionable analytics solutions.
- Ensured audit-ready and compliant reporting by following data governance standards, maintaining KPI documentation, and validating metrics against regulatory guidelines.

Hims & Hers Health | Healthcare Data Analyst | CA, USA

July 2024 – Feb 2025

Project: Real-Time Patient Data Processing

- Processed and evaluated high-volume real-time and near-real-time patient, clinical, and operational data to drive timely decision-making, care monitoring, and operational efficiency
- Designed and maintained Power BI dashboards and analytics solutions using optimized data models and DAX to track patient engagement, clinical workflows, operational KPIs, and data latency metrics.
- Developed and optimized advanced SQL queries to extract, transform, and reconcile streaming and relational healthcare data from SQL Server and cloud-based databases, ensuring accuracy and performance.
- Applied star and snowflake data models and semantic layers to improve dashboard performance, scalability, and consistency across real-time and historical reporting.
- Built and supported ETL and data processing pipelines including data cleansing, transformation, validation, and incremental refresh to maintain high data quality and consistency across real-time data sources.
- Performed data validation, reconciliation, and quality checks across SQL Server, PostgreSQL, Azure SQL, and AWS to ensure reliable patient and operational analytics.
- Collaborated with product, clinical, operations, and engineering teams to gather requirements, translate business logic into analytics solutions, and deliver compliant, audit-ready healthcare reporting.

OPTUM | Clinical Operations Data Analyst | IL, USA

Apr 2023 – June 2024

Project: EHR & EMR Data Integration

- Integrated and interpreted large-scale EHR and EMR datasets to support clinical operations, enhance care coordination, and drive performance reporting across multiple healthcare systems.
- Designed and delivered Power BI dashboards and operational reports using optimized data models and DAX to monitor clinical KPIs such as patient encounters, documentation completeness, care timelines, and provider performance.
- Developed and optimized complex SQL queries to extract, transform, and reconcile structured clinical data from SQL Server and cloud-based platforms, ensuring accuracy, consistency, and performance.
- Built and maintained ETL workflows including data cleansing, transformation, validation, and incremental refresh to standardize clinical data and improve overall data quality.
- Ensured data governance and regulatory compliance by validating clinical KPIs, maintaining metric definitions and documentation, and aligning reports with internal standards and healthcare regulations.
- Performed trend analysis and utilization analysis to identify gaps in clinical workflows, data capture issues, and opportunities to improve operational efficiency and quality of care.
- Collaborated with clinical teams, operations, compliance, and IT stakeholders to gather requirements, translate clinical business rules into analytics logic, and deliver audit-ready, compliant reporting solutions.

Project: Clinical Operations Optimization Dashboard

- Analyzed clinical and operational healthcare data to support clinical operations optimization, improving visibility into patient flow, resource utilization, and care delivery performance.
- Designed and developed Power BI dashboards with optimized data models and DAX to track operational KPIs such as appointment throughput, length of stay, staff utilization, and service efficiency.
- Wrote and optimized complex SQL queries to extract, transform, and validate data from enterprise healthcare databases, ensuring accuracy and consistency across reporting layers.
- Built and supported ETL processes including data cleansing, transformation, and validation to improve data quality and standardization across multiple clinical data sources.
- Performed trend, variance, and root-cause analysis to identify operational bottlenecks, utilization gaps, and improvement opportunities across clinical workflows.
- Automated recurring reports and dashboard refresh processes to reduce manual effort, improve data timeliness, and support faster decision-making for clinical and operational teams.
- Ensured data governance, compliance, and audit readiness by validating KPIs, maintaining documentation, and adhering to healthcare reporting standards and internal controls.
- Partnered with clinical, operations, and leadership stakeholders to gather requirements, translate business needs into analytics solutions, and deliver actionable insights to drive operational improvements.

Cohere Health | Data Analyst | Hyderabad, INDIA**Mar 2018 – July 2019****Project: Patient Enrollment & Retention Analytics Dashboard**

- Analyzed clinical trial and patient enrollment data to monitor recruitment progress, screen failure rates, dropouts, and retention trends across multiple study sites.
- Developed and optimized SQL queries to extract, transform, and validate patient and study data from relational databases, ensuring accuracy and consistency across reporting layers.
- Built and maintained Power BI and Tableau dashboards using strong data modeling (star/snowflake schemas) and DAX to deliver clinical, financial, and operational KPI reporting.
- Supported incremental refresh and performance optimization for large datasets to ensure timely and scalable analytics delivery.
- Performed clinical and financial analytics including trend analysis, predictive analysis, and utilization metrics to support healthcare decision-making.
- Applied data governance and audit reporting standards, maintaining documentation and ensuring compliance with healthcare regulations and internal controls.
- Analyzed Rx claims and PBM-related data (PCPF, M3P, HPMS, CMS) to track healthcare KPIs, compliance metrics, and operational performance.

CERTIFICATIONS:**Certified Health Data Analyst (CHDA)****Microsoft Certified Power BI Data Analyst Associate (PL-300)****EDUCATION:****Masters in Health informatics - 2024 | Governors State University | Illinois, USA****Bachelor of Pharmacy - 2019 | Guru Nanak University | Hyderabad, INDIA**
