Skills

Technical Skills: Python, R, SQL, Java, HTML, Flask, Node.js

Data Analytics: Data Cleaning, Data Modelling, Exploratory Data Analysis (EDA), Data Visualization, Statistical Modeling, A/B Testing, Predictive Modeling, Machine Learning, ETL, Pipelines

Tools & Libraries: Pandas, NumPy, Scikit-learn, TensorFlow, Matplotlib, Power BI, Tableau, Excel (Pivot Tables, Power Query), Google Data Studio

Cloud & Platforms: AWS, Google Cloud Platform (GCP), Microsoft Azure, Cloud Run, BigQuery

Soft Skills: Analytical Thinking, Problem-Solving, Communication, Business Storytelling, Collaboration

Experience

• Data Analyst Intern – Gramener, Hyderabad

Apr 2023 – Nov 2023

- Performed Exploratory Data Analysis (EDA) on large NGO and enterprise datasets to identify behavioral trends and operational gaps, improving analytical accuracy by 25%.
- Built and optimized Python (Pandas, NumPy) and SQL data pipelines, reducing data inconsistencies and preprocessing time by 30%.
- Applied feature engineering and statistical analysis to identify key engagement drivers, improving insight reliability and model interpretability by 20%.
- Developed interactive Power BI dashboards with optimized DAX measures, improving reporting efficiency and stakeholder visibility by 35%.
- Delivered data-driven recommendations through clear storytelling, enabling faster and more informed client decision-making by 20%.

• Data Science Intern – Zinnov LLC

Oct 2022 – Apr 2023

- Supported consulting engagements by translating business challenges into structured analytical and research-driven solutions.
- Conducted market research and competitive benchmarking using financial and industry data, increasing recommendation accuracy by 25%.
- Cleaned and analyzed datasets using Excel and SQL to perform segmentation and TAM/SAM/SOM analysis, improving opportunity identification by 20%.
- Built financial and scenario models to evaluate pricing and go-to-market strategies, reducing strategy analysis time by 15%.
- Designed Excel and Tableau dashboards to communicate insights, improving executive decision-making efficiency by 30%.

• Data Analyst Intern – AnalytixLabs

Jan 2022 – Apr 2022

- Extracted, cleaned, and prepared raw business data using Python (Pandas, NumPy), improving data quality and consistency by 20%.
 - Performed Exploratory Data Analysis (EDA) on sales and retention datasets to identify trends and performance gaps.
 - Applied feature engineering and basic statistical analysis to support descriptive and predictive analytics use cases.
 - Developed interactive Tableau dashboards to visualize KPIs such as revenue and churn, improving reporting clarity by 25%.
 - Automated recurring reports using Python, reducing manual effort and report turnaround time by 30%.
-

Projects

• Healthcare Data Insights and Predictive Analytics

- Analyzed large-scale healthcare energy datasets to identify consumption patterns and operational inefficiencies.
- Performed EDA on 250K+ records, uncovering correlations between occupancy, temperature, and energy usage.
- Cleaned and preprocessed missing and inconsistent data using Pandas, improving data reliability by 25%.
- Built and optimized regression models (Linear, Random Forest, XGBoost) achieving up to 92% prediction accuracy.
- Developed Tableau dashboards to visualize energy trends, anomalies, and efficiency metrics for monitoring.
- Proposed data-driven optimization strategies projected to reduce hospital energy costs by up to 15%.

- **Customer Retention Analytics for Telecom Network**
 - Analyzed 100K+ telecom customer records to identify behavioral and service-related churn drivers.
 - Performed feature engineering on usage, billing, and complaint data to improve model effectiveness.
 - Built Logistic Regression and Random Forest models achieving 86% churn prediction accuracy.
 - Visualized churn risk by customer segment and plan type using interactive Tableau dashboards.
 - Simulated churn-reduction scenarios to support proactive retention strategies.
 - Recommended targeted interventions projected to reduce customer churn by 18% and improve lifetime value.
 - **Transportation and Traffic Pattern Analytics**
 - Analyzed traffic, accident, and weather datasets to identify congestion patterns and root causes.
 - Merged and cleaned 200K+ multi-source records using Pandas and SQL, improving data consistency by 30%.
 - Applied time-series analysis and clustering to identify congestion-prone zones and peak periods.
 - Developed Tableau dashboards with traffic heatmaps and accident hotspot visualizations.
 - Assessed weather impact on traffic flow to improve model interpretability and planning accuracy.
 - Recommended adaptive traffic control and transport strategies reducing congestion by 12–15%.
-

Leadership Experience

Chapter Ambassador

EWB-IUCEE-MLRIT

- Coordinated technical and outreach events, increasing student engagement by 30%.
 - Managed content creation, event logistics, and social media communication.
-

Education

Florida Atlantic University

Masters in Computer Science

Jan 2024 – Dec 2025

GPA: 3.93/4.00

Certifications

- IBM – Data Analysis with Python, Aug 2023
- Web Application Developer – Scope Club MLRIT, Mar 2023
- Programming Essentials in Python – Cisco Networking Academy, Jan 2023
- AI for Everyone – Coursera, Dec 2022
- Artificial Intelligence – 1stop Keep Growing, Apr 2022
