Business Intelligence Developer

PROFESSIONAL SUMMARY

- Experienced Business Intelligence (BI) Analyst with 5+ years of experience in various domains such as Insurance, Banking, and Healthcare.
- Proven ability to design, develop, and implement BI solutions using a variety of technologies, including AWS, Azure, SQL Server, PowerBI and Tableau.
- Strong skills in data modeling, data migration, database design, SQL scripting, reporting and ETL.
- Expertise in using agile methodology and version control systems.
- Committed to delivering high-quality BI solutions that meet the needs of business users.

EDUCATION

University of Colorado Denver

Master of Science, Information Systems

August 2021 – May 2023

K L University, Guntur - India

Bachelor of Technology, Electronics and Communication Engineering

July 2013 – May 2017

TECHNICAL SKILLS

Business Intelligence & Visualization: Power BI, Tableau, Microsoft Azure Machine Learning Studio, Qlik View/sense, Power Query Editor, SSIS, SSRS, DAX, M-Language

Database Management: PostgreSQL, MongoDB, MS SQL Server, Data Modeling, Procedures, Views

Programming Languages: Python, SQL, NO SQL, C++, C, DAX, M-Language, MATLAB

Microsoft Tools: Adv. MS Excel, MS Office 365

Platforms: Jupyter Notebook, PyCharm, Visual Studio, Pandas

Cloud: AWS EC2 Instance, S3 Bucket, Dynamo DB, Lambda

Framework: .Net Framework, Django

Other related skills: Software Development Life Cycle (SDLC), Agile Methodology, SCRUM, JIRA, Confluence, JSON, NumPy, Matplotlib, DAX functionalities, Data Migration, Data Warehouse

WORK EXPERIENCE

Power BI Developer Intern

July 2023 - Present

Denken Solutions, Inc., Irvine, CA

- Gather requirements from business users and identify opportunities for advanced data visualization using Power BI.
- Design, develop, and optimize performant reports, dashboards leveraging DAX, data modeling, and security best practices.
- Employ techniques like drillthrough filtering, decomposition trees, tooltips to build interactive, insightful visuals.
- Integrate and transform data from varied sources, fine-tune data models to enable fast performance.
- Support adoption through training sessions, documentation, and participating in code reviews to continuously improve development practices.

Power BI Developer

June 2017 – July 2021

AJR Info Systems Pvt. Ltd., Hyderabad

- Proficient in Extract, Transform & Load (ETL) development using SQL Server Integration Services (SSIS). Responsible for designing and implementing ETL processes to efficiently extract and load data from various sources, ensuring data quality and reliability.
- Skilled in report writing using SQL Server Reporting Services (SSRS). Successfully created a wide range of reports, including table, matrix, Drill Down, Parameterized, Cascaded, and Sub-reports, to provide valuable insights to stakeholders.
- Well-versed in Data Warehouse concepts, demonstrating a deep understanding of data storage, retrieval, and optimization strategies to support business intelligence and reporting needs.
- Competent in SQL Server Analysis Services (SSAS) with experience in both Tabular and Multidimensional mode

databases. Proficient in dimensional data modeling, cube development, and data manipulations to facilitate advanced analytics.

- Adept at creating and managing job schedules for SSIS packages, ensuring timely and automated data processing. Experienced in working with the SSIS Catalogue Database and Data Mapping Environments for efficient package management.

Radar Engineer Intern

August 2016 – May 2017

Research Centre Imarat, Defense Research and Development Organization, Hyderabad

- Developed a Radar Altimeter System, delivered a most effective and accurate radar altimeter performance. Proficient in MATLAB, VHDL, Xilinx Vivado Suite, RTL Design, and Python. Collaborated across teams to resolve technical issues and presented project status with system improvement recommendations to clients and suppliers while aiding in project management.

Intern

June 2015 – December 2015

Areca Embedded Systems Pvt. Ltd., Hyderabad

- Developed a Coach Guidance Display System that collects train information and displays it on guidance boards on railway platforms. The system uses C#, STM ARM cortex microprocessors, and OrCAD to design circuits and PCBs, develop algorithms, and optimize system performance. The response time of the system were improved, resulting in a more effective solution for public transportation.

Intern

May 2014 – July 2014

Electronics Corporation of India Limited, Hyderabad

- Gained extensive hands-on experience in circuit board design using Altium Designer and OrCAD. Designed and tested various circuits, including microcontrollers, digital signal processors, and field-programmable gate arrays. Implemented embedded algorithms and codes and integrated them with hardware circuits.

ACADEMIC PROJECTS

Data Analysis & Visualization Using Python Programming. (Python, SQLite3, NumPy, Matplotlib)

- Developed a project that analyzed and visualized employment income data for hospitals, educational services, and air transportation in Denver County, Colorado. The project used Python programming, SQLite3, NumPy, and Matplotlib libraries to enhance data processing and visualization. The data was sourced from the Colorado.gov website to create an accurate analysis.

Python-Driven Reporting Automation

- Designed an end-to-end automated reporting infrastructure using Python scripts, facilitating the efficient delivery of key monthly, weekly, and quarterly data reports to vital business stakeholders.

Supply Chain BI Dashboard Creation.

- Engineered state-of-the-art, interactive dashboards with BI tools, translating complex supply chain metrics into user-friendly, real-time visual insights that empowered data-centric strategic planning.

Budget Forecasting & Analysis

- Built interactive Power BI dashboards and reports for 3-year budget projections, factoring 5-15% growth.
- Performed variance analysis, linear/YoY forecasting using Excel based on historical data.
- Formulated comprehensive budget plan with detailed projections and insights supporting business expansion.

Obesity Level Prediction Model

- Engineered machine learning model to predict obesity levels, achieving 98.9% accuracy.
- Utilized Boosted Decision Tree, K-Means Clustering algorithms and data preparation techniques in MS Excel, Power BI.
- Developed in Azure Machine Learning Studio. Significantly improved accuracy over previous models.
