

Nithish

3143842228

nithishwork6@gmail.com

Professional Summary:

- Around **5+** years of strong **IT** software experience in Developing, Testing, Implementing **Enterprise Applications** using **Java/J2EE** platform and web-based applications using **Object Oriented Analysis** and Design (**OOAD**).
- Experience in software development using **Waterfall, Agile Scrum** Methodologies.
- Hands on experience in building **SPA** using **HTML/HTML5, CSS/CSS3, JavaScript, Angular 2** and **AngularJS**.
- Experienced on various **SDLC (Software Development Life Cycle)** like **Waterfall, Rapid Application Development (RAD)** and **Agile (SCRUM)** models.
- Extensive experience with **Core Java, Multithreading, Transaction Management, Exception Handling, Concurrency, Collections, Data Structures, Lambda Expressions, Functional Interfaces** and **JDBC**.
- Extensive working experience with various **J2EE Frameworks** like **EJB, Struts, JSF, JSP, JSI (Prime Faces)**.
- Have good hands on experience on spring framework modules like **Spring MVC, Spring Batch, Spring Security, Spring Data, Spring Cloud, Spring JTA, Spring AOP, Spring Core**.
- Integrated **Micro Services** with **Hibernate ORM** using **Spring Boot** and wrote **HQL** queries for data access.
- Good experience in creating **Databases, Tables, Stored Procedure, Triggers, Views, User defined data types (UDT), Cursors, Functions, data dictionaries, and maintaining data integrity and Indexes** using **PostgreSQL**.
- Involved in issue tracking and **agile** project management using **JIRA**.
- Used various version control software such as **GIT, GIT LAB, SVN, CVS, Big Bucket** for maintaining code repositories.
- Responsible for **API Platform** develop and design on High Available & Scalable **Microservices** with **Spring Boot, Spring Cloud, Spring AOP** and **Oracle11g**.
- Experience on working with **MongoDB NoSQL** database for **CRUD** operations.
- Experience in testing with **JUnit Framework** using **Mockito** and **Easy Mock, Spring Junit Runner, JMeter**.
- Good knowledge in building real time dashboard applications using **Elastic Search, Logstash** and **Kibana (ELK)** to profile and monitor the streaming data of the application.
- Hands on experience in implementation of **Pivotal Cloud Foundry (PCF)** services such as **Pivotal Container Service, Pivotal Application Service** and **Pivotal Functional Service**.
- Ability to work under pressure and manage (Multiple) project tasks with changing priorities and tight deadlines and can work either independently or as a part of a team.
- Worked with Apache Tomcat, IBM Web Sphere application servers.

Education

- | | |
|---|----------|
| • Masters in Computer Science, Saint leo university Tampa,Florida | Dec 2022 |
| • Bachelor of technology, Jawaharlal Nehru Technological University,Hyderabad | May 2 |

Technical Skills:

Programming Languages	C, C++, Java8 & 11, SQL,PL/SQL
JavaScript Frameworks	AngularJS, Angular4,6,7&8, React.js
Java/J2EE Technologies	Servlets, Spring, EJB, JPA, JTA, JDBC, JSP, JSTL, Java8
Frameworks	Struts 2.0/1.0, Hibernate 4.x/3.x, Spring 3.0, Spring Batch, Spring Security, Spring AOP, Spring Core, JSF, Spring IOC.
Web Technologies	HTML, HTML5, CSS/CSS3, AJAX, Type Script, jQuery, Bootstrap, XML, JSON
Database	MySQL, Oracle, MongoDB, PL/SQL, PostgreSQL, NoSQL
Web Services	SOAP, Restful, JAX RS, JAX WS
Messaging	JMS (Java Message Service),kafka
Web Servers	Oracle WebLogic 10.x/9.x, Apache Tomcat 8.0/7.x/6.x,
Application Servers	Apache Tomcat, Web logic
Methodologies	Agile, Waterfall, SCRUM
Testing Tools	JUnit, Mockito
Version Control	SVN, CVS, GIT
IDEs	Eclipse IDE, IntelliJ IDE
Operating Systems	Windows, Linux and UNIX
Software	Visual Studio

Professional Experience

Client: Tredence Inc, CA,US

January 2023 – Present

Role: Full-Stack Developer

Responsibilities:

- Designed and developed web interfaces and business logic using Jakarta **Spring Framework** (MVC architecture), **JSP, Servlets, Java Beans, JDBC, AJAX, JavaScript, HTML, Type Script, DHTML** and **XML** Technologies.
- The application is designed using **J2EE** design patterns and technologies based on **MVC** architecture.
- Involved in various phases of Software Development Life Cycle (**SDLC**) and **Agile** methodology is used for development of the application.
- Developed the monolithic application and involved in migrating existing monolithic application in to **Microservice** Architecture based **RESTful** Service and deployments were done on **AWS**.
- Involved in testing **Micro services** by placing messages in **JBoss**.
- Used **J2EE** design patterns like **Value Object Pattern, Session Façade, Singleton, Factory and DAO**.
- Created Stored Procedures & Functions. Used **JDBC** to process database calls for **Db2** Server database.
- Developed back end interfaces using **PL/SQL** packages, stored procedures, functions, procedures, anonymous **PL/SQL** programs, Cursor management, Exception Handling in **PL/SQL** programs.
- Implemented various features of **Spring** such as **Dependency Injection, IOC, Annotations**
- Responsible for the full software development life cycle (**SDLC**) using **Agile Methodology**, participated in Daily stand-up meetings with **Scrum Master**, communicated with testers and resolved tickets.
- Build **Micro services** for the delivery of software products across the enterprise.
- Developed **RESTful Microservices** using **Spring REST** and **MVC** and used Swagger for manual testing and documentation of **Microservices**.
- Handled Java **Multi-threading** part in back-end component, one thread will be running for each user, which serves that user.
- Developed **CI/CD** system with **Jenkins** on **Kubernetes** container environment utilizing **Kubernetes**.

- Integrated **spring** with **Hibernate** and used ORM tool hibernate to interact with database.
- Implemented the application using **Java Server Faces (JSF)** which is based on **Model View Controller** design pattern.
- Involved in designing the user interfaces using **JSPs**.
- Wrote Unit test cases using **JUnit & Mockito** framework.
- Experience in Backing up databases using **MongoDB** backup facility in **OPS** manager.
- Developed application using **Java/J2EE, Spring Core, Micro Services, spring MVC Hibernate, SOAP**.
- Created and scheduled Batch process using **Java Batch and Spring Batch** and implemented job throttling for spring batch process.
- Used **Spring Batch** to develop batch processing to handle bulk requests from the clients.
- Used **Maven** as build tool to build artifacts on the source code.
- Implemented **Multithreading** feature for processing the multiple requests to achieve high performance.

Environment: Java8, spring, Spring IOC, AngularJS, MongoDB, Maven, Scrum, Restful, Soap, Micro Services, Spring MVC, Agile, SOAP, JAX-WS, JUnit, Linux, Drools, Multithreading.

Client: Apple, NC

December 2021 – December 2022

Role: Java Backend Developer

Responsibilities:

- Deploying of artifacts and **J2EE applications** on **Cloud Foundry (PCF)** by using **Jenkins**.
- Good understanding of databases like **Oracle** and **MySQL Server**.
- Hands-on experience working with Continuous Integration (**CI**) build-automation tools such as **Maven and Jenkins**.
- Validating the monitoring data loaded in **MongoDB** collections through asset movement template process updates to support business users for any data associated subjects.
- Implementation domain base classes providing basic properties using **Spring Data**.
- Testing and production support of core java based **multithreading ETL** tool for distributed loading XML data into Oracle database using **JPA/Hibernate**.
- Developed **SPARK CODE** using **SCALA** and **Spark-SQL/Streaming** for faster testing and processing of data Proficient in working with **JavaScript** Frameworks like **AngularJS, Backbone JS, Node JS**.
- Experience in implementing the **MVC architecture** in backend applications using **Node JS** along with **Express JS** that interacts with **MongoDB** and performed **CRUD** operation on **MongoDB**.
- Used Unit Testing framework for performing Unit Testing.
- Implemented Spring Circuit breaker pattern, integrated dashboard to monitor **Spring Microservices**.
- Build the services utilizing the **Pivotal Cloud Foundry (PCF)** as a platform as a service for **RESTful** services.
- Utilized **Kubernetes** and **Docker** for the runtime environment of the **CI/CD** system to build, test deploys.
- Developed code to consume web services using SOAP and REST.
- Developed REST based Web services to allow communication between the applications.
- Experience with ES6 features including Promises, class, and arrow functions.
- Used Middleware, Redux-Promise, and RXJS Observables in application to retrieve data from Back-End.

Environment: Java8, Swagger, AWS, MongoDB, Soap, Scrum, Restful, Agile, Scala, Jira, Spark, MYSQL, Multithreading, Spring 4.x, Kubernetes, Spring Boot.

Vision techno services pvt.ltd, Hyderabad, India.

Role: Java Backend Developer

2018 April – 2021 June.

Responsibilities:

- Developed UI application initially using Angular 4 and made use of customized components.
- Implemented customer side validations using Angular JS and created services on UI for storing and retrieving data from UI to the backend.
- Developed the backend by using NodeJS, express JS and MongoDB.
- Worked in Agile TDD/BDD environment using SDLC tools like GIT, Jira, Jenkins, and Maven for build packaging, and deployments of the application components.
- Deploying of artifacts and J2EE applications on Cloud Foundry (PCF) by using Jenkins.
- Migrating existing application into REST based Micro services to provide all the CRUD capabilities using Spring Boot and Jersey.
- Worked with Micro service architecture using Spring Boot to modularized code and implemented Rest API's using Spring Rest and integrated Swagger API for documentation.
- Experience in developing database applications using Oracle, MySQL, MS SQL Server and worked on SQL, Stored Procedures and Query Optimization.
- Development of web modules and middleware components using AWS and Spring integration.
- Worked on a project which handles searching algorithms using Elastic Search which is mainly used for pulling analytics related information using the keywords entered by the end user.
- Authenticating Users and providing security to RESTful web services using OAUTH 2.0.
- Implemented PL/SQL queries and used Oracle stored procedures.
- Working in solving cross browser compatibility including chrome, IE and Mozilla Firefox.
- Used IntelliJ Idea and Visual Studio Code as the IDEs and Tomcat Server to deploy the developed applications
- Used Jenkins Pipeline for the builds and deployments
- Used Spring IOC (inversion of control) to remove the object dependencies across the application.

Environment: Java8&11, Soap, Bootstrap, jQuery, Spring Security, HTML5,Bootstrap4.0, Jenkins, Spark, Type Script, Restful, Kubernetes, MYSQL, Oracle, JBoss, Elastic search, PCF, Swagger API, Micro Services, Agile.
