tarishi.89@csu.fullerton.edu | 646-707-5767 | <https://www.linkedin.com/in/tarishi-09a77812a/> | Fullerton, CA

Summary

- Believes in self and organization's growth. Optimistic and joyful personality with more than 2 years of dynamic experience in the IT sector as a Software/Product Engineer, and Python developer. Worked on data analysis tools for product performance, and market analysis. Also provided customer support.
- Trained in Agile (Scrum) Methodology and have been a part of the complete product development lifecycle including interaction with the customer to know their requirements to the actual product implementation stage.

Education

M.S in Computer Science at California State University, Fullerton.

May 2022

Bachelor of Engineering in Computer Science at The North Cap University, Gurugram, India.

Jan 2019

Technical Skills

Language: Python, C, C++, HTML, CSS, JAVA, Hadoop, JavaScript.

Database: MySQL, MongoDB.

IDE: Eclipse, PyCharm, Android Studio, Visual Studio, MATLAB.

Project Management and Version Control: GIT, Agile, SDLC.

Data Visualization tool: Tableau, Kibana, Microsoft Excel.

Libraries and Framework: Flask, Pandas

Others: JIRA, Postman, RESTful API.

Work Experience

California State University, Fullerton

Mar 2021- May 2022

IT-Student Assistant (University Data Center)

- Responsible for providing technical support to the university faculty related to the deployed servers
- Involved in analyzing and maintaining the optimal state of virtual and hard servers using online performance measuring tools to ensure proper functioning
- Perform tasks including racking the servers, reporting the problems, and resetting server configurations as necessary, to avoid any server downtime

Real Time Data Services, Gurugram, India

Oct 2018- Sept 2020

Product Engineer

- Led a project team to analyze the market of business competitors and visualized the results using the tools like spreadsheets and Tableau, to help the company improve its performance and develop better products to meet customer needs
- Involved in migrating the old product development process to the Agile software development cycle process among different teams, to improve project predictability and provide superior quality products
- Designed and created the software requirement specification (SRS) and software design documents (SDD) to help the web development team better understand the needs of customers, and to keep the track of any changes if required
- Extensively used python, elastic search, and Linux shell scripting to deploy data analysis tool Kibana on multiple servers to collect data and visualize various backend parameters such as server downtime, memory consumption, network congestion etc., to track the performance of the company's servers
- Performed functional testing for the existing company's products
- Automated customer support services with AWS tools Alexa, Amazon Polly coded in Python. Defined configuration of the asterisk calling services with AWS tools and the SQL database including the requested responses to provide our clients with virtual agent-based support
- Led a project named GIT management portal – an internal company initiative, designed UI/UX with HTML, CSS, Python, Bootstrap, JavaScript, and Flask. It was an innovative idea to help different teams better interact with server-side code and setting up version control

Stratagem Portfolio Private Limited

May 2018- July 2018

Android Developer

- Designed and developed an Android app for company in JAVA using Android software development kit. Allowing the users to check the status of the shares they invested in and receive updates on various promotions
- Performed unit testing, User acceptance testing for the app created, for bugs fixes.

Wipro Private Limited

June 2017- July 2017

Java Developer

- Collaborated with the team members to work on a project named- The TINXSYS, a centralized facilitating information exchange system among the commercial tax departments of all states for better administration of inter-state trade
- Worked on Java 2 Platform Standard Edition and J2EE (Java Enterprise Edition) for application development and used oracle as the database. Deployed using Tomcat
- Designed and created visually impactful dashboard in Tableau for sales and data performance analysis of the company

Projects

- **Movie Recommendation System:** Developed a movie recommendation web application using collaborative filtering technique. This machine learning project is built in Python with Flask framework and MongoDB Atlas as the database. Front-end is build using HTML, CSS, jQuery, and Bootstrap. The complete application is deployed on Heroku where user can login or register, rate their favorite available movies and get the top ten similar recommendations.
- **A low-cost IoT based air pollution measuring system:** Investigated and researched the harmful gases which maximum pollute air. Developed an IoT-based project using NodeJS and Python. Calibrated 5 sensors to monitor harmful gases such as CO2, SO, etc. to record the percentage amount present in air. Designed and created dashboards to display the results of the harmful gases at the user's location, allowing to take certain measures like wearing masks to avoid health problems.
- **Chatbot for Q&A using Python and AWS Polly:** An experimental chatbot developed with Polly AWS and deployed in Python, built to serve customers support without the need for actual human staff.
- **Event Scheduler:** Designed and built the project using SQL, Python database connections and APIs, helped users to plan and create events in the built-in app calendar without the need to sign in any email.

Certificates and Training

- Google Analytics Individual Qualification – certified by Google.
- Spotlight Award for good performance by Team Lead – Real Time Data Services, Gurugram, India.

July 2021

May 2020

Activities and Achievements

Vice-President of social club named- International Friendship Club. Organize events where students from different regions meet and exchange cultural knowledge.
