SUMMARY

Full Stack Java Developer with 3+ years of experience working on financial platforms across digital payments and capital markets environments. Experienced in building Spring Boot microservices, REST APIs, and Angular and React user interfaces supporting transaction processing, trade reporting, and portfolio monitoring workflows. Hands-on experience using Kafka for event-driven processing, Redis for caching, and PostgreSQL query tuning to improve backend performance. Familiar with deploying containerized applications on AWS using Docker and Kubernetes, with a strong focus on secure API implementation, regulatory compliance support, and reliable system availability.

TECHNICAL SKILLS

Programming Languages & Frameworks: Java (8–17), JavaScript (ES6+), TypeScript, SQL, Spring Boot, Spring MVC, Hibernate/JPA, Node.js, Express.js, RESTful APIs, Microservices Architecture, Secure Coding Practices

Frontend Development: Angular, React.js, HTML5, CSS3, Bootstrap, Tailwind CSS, Responsive UI Design, Component-Based Architecture, Form Validation, Financial Dashboard Development, Cross-Browser Compatibility

Backend & API Engineering: JWT Authentication, OAuth 2.0, Role-Based Access Control (RBAC), API Gateway Integration, Secure REST API Design, Transaction Management, Server-Side Validation, Exception Handling

Databases & Messaging Systems: PostgreSQL, MySQL, Oracle, MongoDB, Redis, Apache Kafka, RabbitMQ, Database Optimization, Query Performance Tuning, ACID Compliance, Data Integrity Management

Cloud, DevOps & Deployment: AWS (EC2, S3, RDS), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD Pipelines, Nginx, Terraform, Prometheus, Grafana

Testing, Monitoring & Financial Compliance: JUnit, Mockito, Selenium, Cypress, Postman, Swagger, ELK Stack, JMeter, Secure Payment Processing, Audit Logging, PCI-DSS, SOX Compliance

PROFESSIONAL EXPERIENCE

Full Stack Java Developer, Goldman Sachs Aug 2024 – Present | USA

- Developed React components for portfolio monitoring tools, enabling internal users to track trade execution status and improving visibility of exposure updates across investment reporting platforms used by over 30 portfolio analysts.
- Implemented backend services consuming Kafka trade events to update lifecycle states, reducing delays in executed transaction visibility by nearly 20% across internal dashboards used by compliance teams.
- Introduced Redis caching for frequently requested pricing data, helping reduce API response delays by approximately 27% experienced by trade analysis tools during high-volume market open hours.
- Created MongoDB repositories to store structured trade analytics data, improving retrieval time of financial records used during internal compliance reporting and external regulatory audit checks by nearly 19%.
- Deployed AWS-hosted microservices using Kubernetes and Terraform-managed infrastructure, ensuring consistent runtime environments for applications supporting capital market risk assessment and transaction monitoring processes.
- Applied JWT validation and centralized exception handling across REST APIs, improving stability of trade-related services accessed by internal portfolio management platforms and downstream reporting systems across daily usage.
- Assisted in implementing API rate limiting and request logging for internal trade reporting services, reducing system slowdowns during peak transaction hours and improving backend service availability by nearly 16% across monitoring dashboards.
- Maintained Selenium and Cypress automation suites within GitHub Actions pipelines, assisting release validation of financial dashboards and reducing post-deployment UI defects reported by users by 21%.

Full Stack Java Developer, PhonePe Sep 2021 – Jul 2023 | Hyderabad, India

- Worked on Spring Boot services handling daily UPI payment requests, improving Hibernate entity mappings and optimizing SQL queries to reduce transaction failures impacting merchant settlement workflows by approximately 18% across reconciliation jobs.
- Developed Angular interfaces for transaction history and wallet balance tracking by integrating REST APIs, enabling support teams to investigate failed payments and reduce average issue resolution time by nearly 22%.
- Implemented OAuth 2.0 authentication and RBAC checks for merchant payout services, helping restrict unauthorized access attempts during onboarding and improving audit readiness scores observed during quarterly internal compliance reviews.
- Tuned PostgreSQL queries used in daily reconciliation jobs, reducing payout report generation time by 25% and helping finance operations teams complete settlement cycles with fewer mismatches and manual corrections.
- Used RabbitMQ queues to process asynchronous transaction validation tasks, reducing timeout-related payment failures observed during peak usage hours by nearly 17% across merchant transaction processing systems.
- Containerized internal payment services using Docker and maintained Jenkins deployment pipelines, minimizing environment-related failures while promoting builds from staging to production environments during scheduled release cycles.
- Wrote JUnit and Mockito test cases for wallet recharge APIs, supporting regression testing before releases and improving transaction stability across frequent application updates by reducing production defects by 15%.

EDUCATION

Master of Science, Rivier University Aug 2023 – May 2025 | NH, USA
Computer Science

Bachelor of Engineering, Sri Venkateswara College of Engineering Aug 2019 - May 2023 | AP, India
