EDUCATION

THE UNIVERSITY OF TEXAS AT DALLAS, TEXAS	Aug 2022 – May 2024
Master of Science, Information Technology and Management	3.52 GPA
GUJARAT TECHNOLOGICAL UNIVERSITY, AHMEDABAD, INDIA	Jul 2017 – May 2019
Master of Business Administration, Marketing & Strategies	3.75 GPA
NIRMA UNIVERSITY, AHMEDABAD, INDIA	Jul 2013 – May 2017
Bachelor of Technology, Electrical Engineering	3.67 GPA

TECHNICAL SKILLS

- **PROGRAMMING:** R, SQL, JavaScript, Python (Numpy, Pandas, PySpark, Scikit-learn, PyTorch, Tensorflow, Matplotlib), Linux, Scala, SAS, Git, SSRS
- **B.I TOOLS:** Power BI, Miro, Qlik, Tableau, ArcGIS, Jira, AzureDevOps, Confluence, MS Excel (VLookup, Index Match, Pivot Tables, Macros, VBA)
- **D.E TOOLS:** Alteryx, Snowflake, Databricks, Airflow, Hadoop, Spark, Flume, Kafka, SSRS, BigQuery, AWS (S3, Glue, EMR, RDS), PowerApps, Azure
- **STATISTICS:** Probability Theory, Causal, Inferential Statistics, Model Evaluation, Hypothesis Testing, Regression, Time Series, Multivariate Analysis
- **CERTIFICATIONS:** AWS Certified Cloud Practitioner Certification, Tableau Desktop Specialist, Microsoft Certified: Power BI Data Analyst Associate

WORK EXPERIENCE

DELTA ELECTRONICS (AMERICAS) LTD., PLANO, TX	May 2023 – Present
Associate Business Intelligence Analyst – Customer Engagement and Operations Management	

- Collaborated with Delta’s Global Unit to discuss, research and analyze market trends, document reports, and identify business priorities, **KPIs**, timelines and deliverables to develop effective **BI Strategies**. Delivered complete **BI reports** & solutions, increased quarterly sales revenue by 8%
- Acted as a key liaison between technical and business teams to communicate requirements by creating user stories & acceptance criteria in **JIRA**
- Created **Adv Excel** templates using VBA,Vlookup to **automate data mapping** & reporting processes, reduced time spent on data entry by over 80%
- Automated **PySpark** scripts in **Python** to access, extract, manipulate over **1M** rows of data/week from various sources, improving data processing
- Utilized **Google Analytics** to create an interactive cohort analysis report that identified drivers of customer churn and developed targeted retention strategies, resulted in a 5% increase in customer retention and optimized business operations enhancing overall customer satisfaction rate by 30%
- Conducted **Sentiment Analysis** on customer feedback data using **NLP** in Python, identified painpoints and increased customer satisfaction by 15%
- Ensembled **ML** models to enhance product sales by accurately predicting market trends and forecasting customer behavior with up to 70% accuracy
- Designed and maintained scalable, automated, user-friendly systems and web-based interactive dashboards. Integrated **SQL Server** with **Power BI** to create impactful data visualizations highlighting business trends, patterns, outliers, critical insights and performance in its competitive landscape
- Created **Grafana** dashboards to monitor **Web KPI**’s such as Server Response Time, Gateway RPS, Uptime/Downtime, Outages & Customer Metrics

COMPASS GROUP, RICHARDSON, TX	Sep 2022 – May 2023
BI Analyst – Student Assistant	

- Performed **Root Cause Analysis** during Sprints to identify bottlenecks, implementing workflow and process automation across cross-functional departments using **Canvas** Applications, Dataverse & **PowerApps**. Successfully deployed **RPA solutions**, significantly reducing manual labor by 70%
- Designed and implemented GCP-based data engineering solutions using **BigQuery**, reducing data processing time by **40%** and saving upto \$150,000
- Leveraged **Postman** to automate HTTP methods for syncing various web data across multiple Environments, reducing data inconsistencies by 100%
- Optimized SQL scripts for data manipulation tasks such as filtering, sorting, and aggregating large datasets, improving data retrieval times by 25%
- Developed and deployed data warehouses for internal customers, improved data accessibility by **55%** and increased analytical capabilities by 30%
- Implemented ML and statistical model to detect patterns and trends in extensive datasets, enhancing higher accuracy and reliability of data insights
- Utilized data in **SharePoint** & Dataverse to create **Power BI** dashboards to analyze insights optimizing processes for 3 depts., saving 90-man hours monthly. Documented training materials on **Azure DevOps Wiki** to help cross functional teams to use applications & troubleshoot technical issues
- Executed **A/B** tests using Google Optimize to evaluate website design changes and product features, increased in click-through rates by upto 33%
- Boosted online visibility and customer acquisition by identifying suitable keywords for Google Ad Search and customizing landing pages and blogs for Search Engine Optimization, resulting in a **70%** increase in website traffic and acquisition of up to **15%** additional new customers each month

GATEWAY GROUP OF COMPANIES, INDIA	May 2019 – Jul 2022
Senior Analyst – Data Analytics and Feature Engineering Division	

- Translated ambiguous business requirements into measurable insights using advanced data analysis, ensured data integrity and accuracy of data
- Enhanced data processing by extracting, transforming, cleaning data with **AWS Data Pipelines**, developed data models based on business priorities
- Developed **300+** test cases, stored procedures, and **SQL test scripts** based on detailed ETL data design, decreased overall testing time by over **60%**
- Accelerated data ingestion speed by **50%** by indexing SQL tables and optimized **SQL Queries** based on **ETL** specifications using **Pandas** and **PySpark**
- Integrated millions of rows of data from **5** disparate data sources using **Hadoop** ecosystem, provided structured data as per business requirements
- Assisted with enhancing high visibility dashboards and reports, provided technical support and troubleshooting of **Power BI** reporting and solutions
- Generated **ad-hoc** reports and data models for large-scale, high-performance data visualizations to predict and forecast dynamic business scenarios
- Successfully **implemented project OKRs**, adhering to the established timeline and deliverables, earning 100% positive feedback from management

PROJECTS

SALES ANALYTICS AND REAL-TIME INSIGHTS: Business Intelligence Analytics Project	Alteryx MySQL Airflow Tableau AWS
---	---

- Automated **ETL** processes and integrated data with BI Tools to develop real-time Sales reports depicting dynamic market scenarios based on **8 KPIs**
- Tracked and geotargeted products selling off-trend in different locations by identifying a correlation between segments of customers and products
- Designed and hosted a real-time, web-based interactive dashboard providing quick sales insights of the latest available data consisting of multiple variables and depicting their influence on varying market scenarios by integrating **MySQL** database to **Apache Airflow**, **AWS**, and **Tableau Online**

MOVIE RECOMMENDER SYSTEM: Machine Learning Project	Python MS SQL Server Power BI
--	----------------------------------

- Developed a Recommendation System to suggest movies to users from the IMDB dataset, which consists of over **5000** films based on user ratings
- Implement a content-based recommendation algorithm using ensembled machine learning techniques, such as Correlation, Euclidean Distance, **Association Rules**, **Collaborative Filtering**, **Content-Based Filtering**, and **Hybrid** methods, using Python libraries: Pandas, NumPy, and Scikit-Learn
- Implemented **KNN clustering algorithm** with a pre-filter on preprocessed data, predicted movies that users are likely to enjoy based on their preferences and past viewing history with **F1 Score** of **94.8%**, saved an average of **26 mins** in movie selection relative to the previous methodology

FLIGHT DELAY PREDICTION: Machine Learning Project	Scikit-learn PySpark Python
---	---------------------------------

- Built an **EMR cluster** to load the preprocessed dataset collected from the Bureau of Transportation Statistics of the USA consisting of over **400,000** flights in the month of Feb 2019 - 2020 in the United States. Extracted relevant features using **PySpark** to build the predictive model from the data
- Ensembled a machine learning model by implementing **Two-Class Boosted Decision Tree** algorithm and achieved **F1 Score** of **91.7%** in predicting whether flight on a specific route would be more than 30 minutes late. Significantly reduced airline cost and improved airline operational efficiency

EDGE COMPUTING & IOT SYSTEM: Inventory Management & Optimization: Food Wastage Management System	SDLC UML UI/UX
--	--------------------

- Integrated Edge Computing & IoT technologies for reducing grocery wastage in restaurant and drafted Inventory management Systems proposal
- Developed **SOWs**, detailed solution & functional design document (feature list), encompassing feasibility analysis, system architecture, process flow design, Proof of concepts, user interface, & an implementation roadmap, ensuring a strategic approach to addressing system challenges
- Utilized **UML** diagrams like **BPMN**, Class Diagram, Sequence Diagram, and completely designed the system database, extensively using **LucidChart**
- Identified Use cases, emphasizing grocery expiration attributes, and utilized **user stories** to design multiple intuitive **UI/UX interfaces** using **Figma**
