

Ghouse MD

Data Engineer

Lombard, IL | mohammadftde713@gmail.com | [6094791846](tel:6094791846) | www.linkedin.com/in/abbumd786

PROFESSIONAL SUMMARY:

Dynamic Data Engineer with around 5+ years of experience in designing, developing, and managing data engineering and warehousing projects across Finance, Sales, and Marketing industries. Expertise in AWS Glue, Lambda, Redshift, Azure Data Factory, Azure Functions for building and monitoring scalable data pipelines, with proficiency in data transformation and automation. I am skilled in using Snowflake, Amazon QuickSight, and SQL for creating data models, reports, and dashboards. Strong background in ETL processes, data validation, and performance tuning for cloud-based solutions.

EDUCATION:

Masters in Business Analytics from Lewis University, Romeoville, Illinois - USA Bachelors in Electrical Engineering from JNTUH - India

TECHNICAL SKILLS:

Database	Amazon RDS, Amazon Redshift, Amazon DynamoDB, Azure SQL DB, Snowflake, Oracle
Big Data	Amazon S3, Amazon Redshift, AWS Glue, Amazon Kinesis, AWS EMR, Azure Data Lake
Reporting	Amazon QuickSight, Tableau, SSRS
ETL Tools	AWS Glue, Amazon Redshift Spectrum, Apache Spark (on AWS EMR), Azure Data Factory, Talend
Analysis Tools	Amazon Redshift, Alteryx
Data Modelling Tools	Erwin, Excel
Languages	SQL, T-SQL, U-SQL, PySpark
Tools/Methodologies	Azure DevOps, AWS CloudFormation, GIT, Jenkins, Apache Hive, Terraform

PROFESSIONAL EXPERIENCE:

Equity Bank, Kansas, USA

AWS Data Engineer

Feb 2023 – Current

- Designed and deployed an AWS-based containerized infrastructure for data processing and analytics, resulting in a 20% increase in data processing capacity.
- Utilized Python for writing data into JSON files for testing websites and created scripts for data modeling.
- Designed and configured databases, backend applications, and programs. Managed large datasets using Pandas data frames and SQL.
- Developed scalable data pipelines using AWS services like Glue and Lambda for ingesting, translating, and analyzing large data sets.
- Created and managed workflows using Apache Airflow on AWS, automating tasks and scheduling. Built Directed Acyclic Graphs (DAGs) and executed jobs on AWS EMR or EC2 clusters.
- Built and tested applications, managing database connections with both SQL (RDS, Redshift) and NoSQL (DynamoDB) databases.
- Integrated Snowflake as the central data warehouse solution, enabling seamless data processing and analytics from AWS S3 and other cloud data sources.
- Optimized Snowflake queries and performed data transformations using Snowflake's powerful SQL capabilities to improve performance and scalability of data pipelines.
- Implemented CI/CD pipelines using AWS CodePipeline, provisioning AWS environments, and developing automation scripts using Python and Shell scripting.
- Imported real-time weblogs using Kafka as a messaging system and ingested data into AWS Kinesis and Amazon MSK for real-time data processing.
- Worked on Big Data Integration & Analytics using technologies such as Hadoop, PySpark, Kafka, and AWS Glue.
- Proficient in applying the Spark DataFrame API for data manipulation within Spark sessions.
- Maintained CI/CD pipelines and automated environments and applications using AWS CloudFormation, Git,

Terraform, and Ansible.

- Conducted data validation and reporting using Amazon QuickSight for business intelligence and visualization.
- Performance tuning of SQL queries, Data Pipelines, and dashboards in Tableau and Amazon QuickSight.

Environment: AWS Glue, Amazon S3, AWS Lambda, AWS Redshift, AWS EMR, Apache Airflow, Apache Kafka, AWS Kinesis, Terraform, Ansible, Python, Git, Amazon QuickSight, Snowflake, Tableau

ICICI Bank, India

Azure Data Engineer

Feb 2021 - Dec 2021

- Building ADF pipelines to extract and manipulate data from Azure Blob storage/Azure Data Lake/CosmosDB/SQL Server on cloud.
- Building pipelines using Azure logical apps to extract and manipulate data from Sharepoint.
- Developed scope script using U-SQL to generate daily, monthly structured streams/ORC files in Cosmos.
- Enhancing Multi-Dimensional Revenue Data Cube from ORC files generated in cosmos using TITAN for Business solutions.
- Maintaining and troubleshooting existing Power BI dashboards in case of data refresh failures which are owned by our team.
- Responsible for Windows VM patching on AZURE.
- Performing research to identify source and nature of data required for ETL solutions using Azure Databricks.
- Extensively used Azure Databricks for data validations and analysis on Cosmos structured streams.
- Developing job monitoring alerts for job failures and latency using scope script.
- Extensively used Dragonfly Job Scheduler for scheduling, monitoring the Scope jobs on daily/monthly basis.
- Experience working with Talend ETL and Snowflake cloud database systems.
- Performing Data Validation between HDInsights cluster & Target SQL Server using Hive SQL.
- Highly knowledgeable in concepts related to Data Warehouses schemas, Star Schema modeling and Snowflake modeling and processes.
- Developing custom stored procedures for delta loads, functions, triggers using SQL, T-SQL on cloud SQL server.

Environment: Cosmos, Scope Studio, U-SQL, C#, Azure Data Factory, Azure Data Lake, Azure Databricks, GitHub, Snowflake, Iris Studio, Cauce, Kensho, SharePoint, Windows 10

Fortis Healthcare Limited, India

Data Engineer/Analyst

May 2018 - Nov 2020

- Performed basic data validation and cleansing using SQL and Python to support healthcare analytics and reporting.
- Supported the extraction, transformation, and loading (ETL) of healthcare data into Azure Data Lake Storage for reporting and analytics.
- Wrote basic SQL queries and PL/SQL scripts to retrieve and validate patient records, billing details, and operational data.
- Worked with Azure Databricks and Python to perform initial data cleansing and transformation for structured and unstructured healthcare datasets.
- Assisted in implementing data quality checks to ensure accuracy and consistency of healthcare reports used by doctors and administrators.
- Helped in monitoring and troubleshooting data pipelines to identify and resolve issues in data processing workflows.
- Supported the integration of various healthcare data sources (EHR, patient records, and financial transactions) into Snowflake for analytics.
- Collaborated with the Business Intelligence (BI) team to ensure data is correctly formatted for Power BI reports and dashboards.
- Participated in knowledge transfer sessions with senior engineers to understand best practices in data governance and security.

Environment: Azure Data Factory, Azure Data Lake, Azure Databricks, SQL, PL/SQL, Snowflake, Power BI, Python, GitHub.
