EDUCATION

Pace University, New York – Master of Science in Data Science

September 2023 - May 2025

University of Mumbai, India – Bachelor of Engineering in Information Technology

August 2019 - June 2023

CERTIFICATIONS

- [AWS Machine Learning Specialty](#)
- [AWS Solutions Architect Associate](#)
- [AWS Data Engineer Associate](#)
- [Databricks Data Engineer Associate](#)

EXPERIENCE

Data Science Internship – **HindsightTechnology Solutions, New York**

November 2024 – Present

- **Task:** Streamlined data analysis and report generation tasks using Python, including the creation of visual graphs.
- **Achievements:** Developed automated scripts to streamline data processing, reducing report generation time by 90%. Designed and integrated visual graphs to enhance data presentation and insights.
- **Result:** Enhanced data analysis and reporting efficiency, enabling faster insights and better decision-making.

Generative AI Internship – **American Wealth Center, Texas**

May 2024 – July 2024

- Extracted financial metrics from unstructured documents using Amazon Bedrock, increasing accuracy by 30%.
- Automated data validation and comparison with Python scripts, ensuring consistency across formats.
- Developed reporting dashboards, reducing manual processing by 40% and improving team productivity.

Jr. Data Scientist – **Programming Hub, Mumbai**

Jan 2022 – September 2023

- Designed and optimized NLU models with RASA, achieving 74% accuracy and refining models based on user interactions.
- Integrated RASA Chatbot with Zendesk CRM to automate query escalation, improving support efficiency.
- Scaled infrastructure with AWS (Lambda, S3, CloudWatch) and improved chatbot performance.

PERSONAL PROJECTS

End-to-End Blog Generation Pipeline on AWS

- **Task:** Automate blog generation and storage efficiently using Generative AI.
- **Solution:** Built a serverless pipeline with AWS Lambda, API Gateway, and Bedrock (Llama 3 8B), leveraging prompt engineering.
- **Result:** Enhanced blog generation with refined prompts, real-time processing, and seamless storage in S3.

Real-time Data Processing Pipeline

- **Task:** Boost data processing throughput and cut infrastructure costs.
- **Solution:** Created a real-time pipeline using **AWS Kinesis, Lambda, and DynamoDB** with **S3 events** for data ingestion.
- **Result:** Boosted throughput 75% with parallel Lambdas, cutting costs 30% via serverless scaling.

Osteoarthritis Classification using Femur Tibia Angle (FTA)

- **Task:** Classify osteoarthritis from grayscale images of 160 patients.
- **Action:** Applied corrosion technique to improve image clarity, then implemented machine learning models (SVM, Logistic Regression, LightGBM, CatBoost, Decision Tree, Random Forest) and performed K-fold cross-validation.
- **Result:** Achieved 81% accuracy, automating a critical step in clinical evaluation and enhancing diagnostic efficiency

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, EBS, IAM, RDS, Redshift, Lambda, VPC, DynamoDB, Glue, SageMaker, Kinesis Data Streams, SNS, SQS, Bedrock)

Programming Languages: C++ | Python | SQL

Data Science: Exploratory Data Analysis (EDA) & Reporting | Statistical Analysis | Data Visualization | Predictive Modelling | ETL

Python Libraries: Boto3 | Langchain | PyTorch | Scikitlearn | Tensorflow | Keras

PUBLICATION

TAKA Cybersecurity Chatbot, IEEE 2024: Co-authored a paper on an AI-driven cybersecurity chatbot, published in IEEE Xplore (**DOI:** 10.1109/ACCESS.2024.10393016).
