

POOJA MASANI

Nashville, TN • (763) 406-1477 • poojamasani9@gmail.com • [Linkedin](#)

EDUCATION

The University of Tennessee, Knoxville (UTK)
Bachelor of Science in Computer science
Dean's List for 4 semesters

Graduation: May 2025
GPA: 3.8/4

SKILLS

- **Programming Languages:** Python, Java, JS, C++, C#, Kotlin, SQL.
- **Data Analytics & Visualization:** Power BI, Toad Data Point, Excel (Pivot Tables, VLOOKUP), PySpark
- **Cloud & Databases:** Firebase, Azure, AWS
- **Web & App Dev:** React, Android Studio, RESTful APIs, GitHub, WebGL
- **Methodologies:** Agile (Scrum), Waterfall

EXPERIENCE

Broadcast Music Inc. (BMI)

May 2024 – August 2024

Data Analyst Intern

- Conducted exploratory data analysis (EDA) on large-scale music performance datasets to identify trends and insights, supporting business decision-making.
- Developed interactive dashboards in Power BI, visualizing key performance metrics such as revenue per song and artist performance trends, improving reporting efficiency by 30%.
- Automated SQL-based data pipelines, optimizing queries for enhanced accuracy and performance across large relational databases.
- Explored AI implementation strategies for automating cue sheet processing and improving data analysis workflows, enhancing operational efficiency.

ECOM Solutions Inc.

May 2023 – August 2023

Software Development Intern

- Optimized data retrieval and processing workflows, improving application performance and reducing load times by 25%.
- Collaborated with cross-functional teams to integrate RESTful APIs, ensuring efficient data exchange across platforms.
- Developed and maintained responsive, user-friendly web pages using JavaScript and React, ensuring seamless functionality across different devices and browsers.

UTK. Shuai Li Lab

December 2022 – May 2023

Research Assistant

- Conducted statistical modeling and data analysis to create a digital twin of the Zeanah building, simulating real-world environments in Unreal Engine and Microsoft Azure.
- Developed predictive models leveraging Python, R, and cloud-based databases to analyze real-time data and optimize simulations.
- Collaborated with a graduate student to design and implement system architecture, ensuring seamless integration of physical and digital elements to improve research accuracy and efficiency.

PROJECTS

Smooth Photorealistic Digital Tours

August 2024 – Present

- Collaborating on a scalable 3D rendering pipeline using 3D Gaussian Splatting to enable adaptive Level of Detail (LOD) rendering in web browsers.
- Spearheading the rendering component using JavaScript, WebGL, and React, optimizing visual fidelity and runtime performance.
- Built rendering modules compatible with dynamic user interaction and responsive design across devices.

Pax-Pal

August 2023 – Present

- Built a health tracking app for individuals with diabetes, focusing on data visualization and predictive analytics for health trends.
- Designed and developed the frontend in React, integrating real-time analytics using Python and SQL for data

storage and processing.

Vol-Mate

January 2023 – Present

- Developed an Android-based networking platform, utilizing Firebase for data storage and Google authentication for secure logins.
- Applied SQL and cloud database techniques to handle real-time user data efficiently.
