

Pranavi Gunukula

Data Engineer | Data Analyst

Pranavigunukula9@gmail.com | 314-665-9107 | LinkedIn | Saint Louis, MO

SUMMARY

Data Engineer with 3+ years of experience designing and automating large-scale **ETL pipelines**, **data lakes**, and **real-time data workflows** using **AWS Glue**, **Spark**, and **Kafka**. Skilled in **Python**, **SQL**, **Airflow**, and **cloud architecture (AWS, GCP)** with a strong focus on data reliability, governance, and performance optimization.

EDUCATION

Masters in Computer Science | Saint Louis University, MO

Aug 2022 – May 2024

Bachelor of Science in Computer Science | Kakatiya Institute of Technology & Science

Aug 2018 – Jun 2022

Skills

Programming Languages: Python, SQL, R, Scala

Databases: Snowflake, PostgreSQL, MySQL, MongoDB

Big Data Tools: Apache Spark, Kafka, Airflow, Databricks, Flink

Cloud Platforms: AWS (Glue, S3, Redshift, EC2), GCP (BigQuery, Dataflow), Azure Synapse

ETL & Orchestration: Apache NiFi, Matillion ETL, MSBI (SSIS, SSAS, SSRS)

DevOps & CI/CD: Git, Jenkins, Docker, AWS CodePipeline

Data Visualization: Power BI, Tableau, Looker

EXPERIENCE

Data Engineer

Jul 2024 – Present

Bank of America, USA

- Built high-performance **batch and streaming pipelines** using AWS Glue, PySpark, and Kafka, improving data processing speed by 40%.
- Designed secure **data lake architecture** using AWS Lake Formation with encryption and IAM policies for compliance.
- Automated ETL workflows with **Apache Airflow**, adding failure alerts and real-time monitoring to boost reliability by 25%.
- Developed **cross-cloud pipelines** between AWS and GCP for scalable, low-latency analytics.
- Created CI/CD pipelines in Jenkins and CodePipeline, reducing deployment time by 50%.

Data Engineer Intern

Jun 2023 – Aug 2023

Blue Cross Blue Shield (BCBS), NJ

- Created and optimized SQL-based ETL scripts to transform raw healthcare claims and provider datasets for use in risk scoring and cost prediction models.
- Participated in schema design reviews and helped standardize staging environments to follow star schema and 3NF normalization, improving query performance and data integrity.

Data Engineer

Mar 2020 – Apr 2022

SpringML, India

- Optimized complex SQL workflows in Snowflake, implementing Star and Snowflake schemas to improve data modeling and reduce ETL runtime by 40% on a 15TB warehouse.
- Built and deployed scalable ML-ready pipelines using Python (Scikit-learn, SciPy) and R, extracting insights from 500M+ row datasets for advanced analytics use cases.
- Led cloud migration to AWS, architecting automated data ingestion pipelines with S3 and monitoring via CloudWatch, resulting in improved pipeline efficiency and reliability.
- Improved data transformation performance through advanced partitioning, parallel processing, and indexing strategies, enhancing scalability and data quality across workflows.
- Furnished real-time, actionable insights through Power BI and Looker dashboards, supporting key KPI monitoring and contributing to an estimated \$90K in cost savings.

Projects

Hospital Management System (2024): Built a **Django** web app with secure APIs and integrated BI-ready data models for patient tracking.

Alien Invasion - Game Data Analytics (2023): Captured gameplay data with Python and analyzed player behavior using Pandas and Matplotlib.
