

Sruthi Reddy

Full Stack Java Developer

Email: sruthi.eng.2000@gmail.com | Mobile: +1 (901) 631-0873 | [LinkedIn](#)

SUMMARY:

- Having 3 years of experience in full-stack development using Java, Spring Boot, and Angular in Financial/Insurance/eCommerce environments.
- Experience in working in environments using Agile (SCRUM) and Test Driven Development (TDD) methodologies.
- Extensively worked on n-tier architecture systems with application system development using Java, JavaScript, Angular 8/11, JDBC, Servlets, JSP, Web services, Spring, Spring Boot, Hibernate, XML, SAX, and DOM.
- Hands-on experiences with Core Java with Multithreading, Concurrency, File Handling I/O, Generics, Data Structures and Collections, and Garbage Collection.
- Experience in developing, deploying, and managing N-tier, server-centric J2EE enterprise-class projects using Eclipse IDE 3.x/4.x, My Eclipse 6.5, J2SE1.4/1.5/1.6 (Java 2, Applets, JDBC 3.0, RMI), J2EE 1.5 Web application technologies (Servlets 2.x, JSP 1.x/2.x, JSTL 1.2, JSF 1.x, JNDI), Enterprise application technologies (EJB 2.x/3.0, JMS).
- Good experience on Design Patterns (J2EE) like Singleton, Factory, DAO, Session Facade, Front Controller, and Delegate Pattern.
- Experience in working on DevOps teams and helping automate server and infrastructure configurations using shell scripting and building Docker Images.
- Experienced with Angular 14 features such as creating custom directives, decorators, and services to interface with both RESTful and legacy network services, as well as DOM applications.
- Experience in deploying the Microservices using Docker containers and ability to set up a continuous integration and deployment pipeline using Jenkins with GitHub on AWS or any Cloud Service.
- Experience in Spring Framework (MVC/IOC/ORM/JDBC/AOP/BATCH/WEBFLOW/Context) and Struts (MVC, architecture, interceptors, action mappings, and resource bundles).
- Extensively worked on database applications using Amazon RDS, OracleDB, SQL Server, PostgreSQL, SQLite, and MySQL.

TECHNICAL SKILLS:

Operating Systems	DOS, Windows, Unix, and Linux
Languages	Java, JavaScript, Python, C, C++, SQL, HQL, PL/SQL, TypeScript,
Java/J2EE Technologies	Java 8 EE 4/5, Servlets, JSP, EJB, JSTL, XSLT, JDBC, JNDI, JMS, JPA, JavaBeans
Frontend Technologies	React.js, Angular 14/12/9, HTML5, CSS3, Bootstrap, Redux, jQuery
Backend & Middleware	Java 17/11, Spring Boot, Spring MVC, JPA, Hibernate, JSP
Cloud Platforms	AWS
Frameworks	Hibernate, Spring boot, React Native, GraphQL, JPA, Restful APIs, Apache Camel, Spring MVC, Spring, Spring Web flow.
RDBMS / NoSQL	ORACLE 10g MS-Access, MySQL, SQL-Server, DB2, MongoDB, Kafka Web/Application Servers Apache Tomcat, JBoss, Web Sphere, WebLogic.

DevOps Tools	GitLab, GitHub, Bitbucket, JIRA, Kubernetes, Slack, AWS Cloud Computing and Storage, Terraform, Jenkins.
Version Controls	GIT, SVN, CVS, Bitbucket
Methodologies	Unified Modelling Language (UML), Rational Unified Process (RUP), Agile.

PROFESSIONAL EXPERIENCE:

Wallenius Wilhelmsen, Woodcliff Lake, NJ – Dec 2024 – Present

Java Full-Stack Developer

The Wallenius Wilhelmsen group is a market leader in roll-on/roll-off (RoRo) shipping and vehicle logistics, managing the distribution of cars, trucks, rolling equipment and breakbulk to customers all over the world. The company operates around 130 vessels servicing 15 trade routes to six continents, a global inland distribution network, 120 processing centers and eight marine terminals. Headquartered in Oslo, Norway, the Wallenius Wilhelmsen group has 8,200 employees in 29 countries worldwide. The company's purpose is to build sustainable supply chains, imagining new, more sustainable solutions for the changing world of mobility and transport on land and at sea. To keep the cargo safely and efficiently moving, we are powered by 8,200 amazing people, working as truck drivers, at ports, at 121 processing centers, and offices in 29 countries. We have over 130 vessels sailing on every ocean with some of the lowest emission levels in the roll-on/ roll-off segment. And we have systems and software that fit in the palm of a hand to keep cargo information flowing in real-time.

Responsibilities:

- As a J2EE full-stack developer, the developer role will be instrumental in working with the VPC application development team.
- Participated in Software Development Process phases like development, testing, deployment, and maintenance
- Participated in all phases of research, including requirement gathering and used agile methodology.
- Developed code using Java, J2EE, and Spring also used Hibernate as an ORM tool for object relational mapping.
- Configured WebSphere Application Server resources like JDBC Data Sources, JDBC Providers, JNDI, Security resources like JAAS authentication (J2C) aliases, and Connection Pooling to connect to the DB2.
- Used Spring DI (Dependency Injection), Spring Batch to inject the dependencies to the parent object.
- Utilized the AWS Lambda platform to upload data into AWS S3 buckets and to trigger other Lambda functions.
- Developed AWS CloudFormation templates, set up Auto scaling for EC2 instances, and was involved in the automated provisioning of the AWS cloud environment using Jenkins.
- Used Eclipse IDE to develop the different J2EE components.
- Used Microservices architecture, with Spring Boot-based services interacting through a combination of REST and Spring Boot.
- Developed and deployed Microservice-based applications using Spring Boot and Spring Cloud.
- Created Swagger/OpenAPI documentation for OMS endpoints and downstream integration flows.
- Managed CI/CD workflows using TeamCity and GitHub Actions for safe deployment rollouts and production hotfixes.
- Developed custom directives in Angular 14 to share common functionalities between different components.
- Implemented context-specific deserialization filters in Java 17 to enhance data security by preventing malicious code execution during deserialization processes.
- Assess current and emerging technologies to help define the target roadmap in the portfolio.
- Assist in system architecture & solution to help inform & discuss with multiple stakeholders.
- Collaborate with various stakeholders to define solutions to be developed along with the high-level features needed in the products.
- Assist in defining and driving integration models and specifications for VPC applications.

Environment: Java 17, Spring Boot, Angular 14, AWS Lambda, EC2, S3, Cloud Formation, Jenkins, Kafka, Docker, Microservices

Allana Pvt Ltd, Hyderabad, India – July 2022 - Aug 2023

Java Full-Stack Developer

At Allana Pvt Ltd, I worked on a high-traffic eCommerce Order Management System (OMS) designed to streamline end-to-end order lifecycle processes including placement, fulfillment, returns, and customer engagement workflows. The objective of the project was to modernize the OMS platform, enhance customer experience, and improve scalability to support rapid business growth and seasonal traffic spikes.

Responsibilities:

- Coordinated with offshore support teams to triage order placement, cancellation, and return issues in the OMS.
- Integrated external services such as recommendation engine APIs and loyalty frameworks to enhance customer experience.
- Implemented caching (Redis) and optimized DB queries for high-volume eCommerce traffic, improving order API response by 30%.
- Collaborated with cross-functional teams to integrate storefront UI (React/Angular) with secure backend endpoints for OMS tracking.
- Used ANT and Maven for building the applications and developing the build scripts.
- Worked on Docker hosting the server and set up the Docker containers to host the application.
- Involved in developing components on the Reporting Dashboard with Spring MVC, Spring Framework, and Hibernate, and created Microservices using Spring Boot.
- Created Swagger/OpenAPI documentation for OMS endpoints and downstream integration flows.
- Managed CI/CD workflows using TeamCity and GitHub Actions for safe deployment rollouts and production hotfixes.
- Designed and developed RESTful APIs, enabling seamless communication between the frontend and backend systems.
- Deployed and managed containerized applications on AWS EKS, ensuring high availability, scalability, and fault tolerance.

Environment: Java 8, Spring Boot, Angular, AWS Lambda, EC2, S3, Cloud Formation, Jenkins, Kafka, Docker, JNDI, DB2, WebSphere, Microservices

Polite Software Solutions, Hyderabad, India | May 2021 – June 2022

Jr. Java Developer

At Polite Software Solutions, I worked on a data-driven enterprise application designed to process large-scale structured and semi-structured data feeds and deliver real-time insights to business and operational teams. The project focused on modernizing data ingestion and analytics capabilities by integrating full-stack application development with big-data processing frameworks.

Responsibilities:

- Involved in gathering and analyzing System Requirements.
- Involved in the development of UI using internal framework (Atom) and Java.
- Imported the data using Spark RDD and transformed using actions on RDD.
- Used Spark/MapReduce jobs to parse the JSON or XML data.
- Implemented Spark using Java, utilizing Data frames and Spark SQL for faster processing of data.
- Involved in the processing of data feeds using big data technologies like hive, scoop and Spark.
- Designed the application and worked with the offshore development team.
- Used Spring Framework for the business layer using Spring Core, Spring Web MVC, Spring Batch modules.
- Used RTC as a version control tool to maintain the code repository.
- Involved in deploying the application on development and Staging environments.
- Used Splunk for viewing the extracting the logs and server information.

Environment: Java, J2EE, RESTful Web services, AngularJS, SQL, PL/SQL, Hive, Hue, Spark, Scoop, Spring, Splunk, Eclipse, Oracle, AutoSys, WebLogic.

EDUCATION:

University of Memphis, Memphis, TN

Master of Science in Data Science | Aug 2023 – May 2025

Acharya Nagarjuna University, Guntur, India

Bachelor of Science in Computer Science | May 2018 – May 2022
