EDUCATION

California State University EastBay

Master of Science in Statistics (Data Science)

Hayward, CA

Aug. 2023 – May 2025

Mahatma Gandhi Institute Of Technology

Bachelor of Science In Computer Science

Hyderabad, India

Aug. 2018 – May 2022

EXPERIENCE

Data Scientist

OYO

July 2022 – Aug 2023

Bangalore, India

- Developed a machine learning-based dynamic pricing model using gradient boosting (XGBoost), improving RevPAR by **12%** across 500+ hotel partners by optimizing room rates in real-time.
- Built classification models to identify at-risk customers using decision trees and logistic regression, leading to a **15%** improvement in churn prediction accuracy.
- Implemented time-series models (ARIMA, Prophet) to forecast occupancy demand trends across cities, aiding in resource allocation and pricing strategy optimization.
- Monitored model performance post-deployment using custom accuracy dashboards (SQL + Power BI), enabling automated retraining triggers when model precision dropped below thresholds.

Data Analyst Intern

VodafoneIdea (Telecom)

Sept 2021– July 2022

Hyderabad, India

- Executed **complex SQL** queries to extract, transform, and analyze large datasets, leading to a 15% improvement in data retrieval efficiency and accuracy.
- Collaborated with **cross-functional teams** to identify data requirements, resulting in the successful integration of new data sources and improved reporting capabilities.
- Conducted exploratory data analysis (**EDA**) to uncover trends and patterns, providing actionable insights that informed strategic business initiatives.
- Automated data processing workflows using Python and SQL, reducing manual data handling time by 30% and minimizing errors.

PROJECTS

AgriAI | Keras, FastAPI, React.js, Docker, TensorFlow Serving, GCP

- Developed a CNN model using TensorFlow/Keras for potato disease classification, enhanced with ImageDataGenerator for real-time data augmentation.
- Deployed the model via TensorFlow Serving and **FastAPI**, containerized with **Docker**, and served as scalable REST APIs on **GCP** using Cloud Functions and Cloud Storage.
- Built a **React.js** frontend with drag-and-drop image upload, integrated with the backend for real-time predictions and end-to-end system validation.
- Developed Power BI dashboards for monitoring ML model accuracy and automated retraining, reducing manual QA by 40%.

ICU Mortality Analysis | SQL

- Queried 91K+ ICU patient records using 25+ complex SQL statements to derive clinical and operational insights from structured EHR data.
- Used ranked window functions to identify top 10 ICU units with highest mortality, and analyzed severity metrics to prioritize risk factors.
- Segmented patient data by BMI, ethnicity, and comorbidities, revealing that diabetic patients had a 1.7× higher mortality risk and accounted for 15.2% of deaths vs 9.3% of the general population.
- Generated statistical reports highlighting comorbidity trends and mortality risk factors to support clinical decision-making.

TECHNICAL SKILLS

Languages: Python, C, SQL, R

Tools and Frameworks: TensorFlow, PyTorch, Scikit-learn, Keras, Pandas, NumPy, Power BI, Tableau, Matplotlib, Seaborn, Excel, MySQL, AWS (EC2, Lambda, S3), VS Code

Concepts: Supervised & Unsupervised Learning, Deep Learning, Fine-Tuning LLMs, Natural Language Processing (NLP), Exploratory Data Analysis (EDA), Recommendation Systems, A/B Testing, Time Series Forecasting, Model Evaluation & Optimization

Certifications: IBM Data Science Professional Certificate
