Apex, NC

Software Engineer

Seasoned Information Technology professional with 7+ years of experience in software development, enhancement, and system maintenance across complex enterprise environments. Adept at building scalable, high-performance web applications using Java, Scala, JSP, Spring MVC, Spring Boot, Angular 7, AngularJS, and Oracle.

Proven expertise in integrating complex systems through IBM MQ, Solace messaging platforms, and SFTP-based mailbox interfaces.

Skilled in developing applications for mobile and tablet platforms, supported by solid Core Java and Object-Oriented Programming knowledge.

Strong domain experience spanning Investment Banking and Telecommunications environments.

Recognized for strong analytical and problem-solving abilities, effective teamwork, and the ability to collaborate seamlessly with cross-functional teams to deliver high-quality software solutions.

TECHNICAL EXPERTISE

Languages	Java, Android, Scala
Web Technologies\Framework	Bootstrap, Spring MVC, Spring Boot, RESTful services, WebSphere Application server, Apache Tomcat
Scripting languages	Angular7, Typescript, Angular JS, JavaScript, CSS, SCSS, jQuery, Shell script, Perl script.
Mobile Development Technologies	Android SDK, PhoneGap, Third party libraries and APIs like Google APIs, Smack API.
Database	Oracle, MS SQL Server, SQLite, PostgreSQL
Operating System	Linux, UNIX, Ubuntu
Mark up Languages	HTML, XML, HTML5
IDE	IntelliJ, Eclipse, Android Studio, Spring Tool Suite, Visual Studio Code and a CLI
Middleware\Sytem Integration	IBM MQ,Solace and dbExchange -Mailbox
Tools	Putty, WinSCP, Postman, SoapUI, SQL Developer, WinMerge, Git,BitBucket ,Jenkins,IBM UrbanCode
Container Management\ Cloud	Red Hat OpenShift, Google Cloud

WORK AUTHORIZATION

GC EAD (valid till 10/2030) – No sponsorship required

EDUCATION

Bachelor of Technology in Engineering (Electronics and Communication Engineering)

Kannur University, Kerala, India - 2010

Diploma in Telecommunication Technology

Board of Technical Education, Kerala, India - 2007

PROFESSIONAL EXPERIENCE

CGI Technologies and Solutions Inc, Cary NC, USA

Client: Deutsche Bank, Cary NC, USA

Role: Software Engineer (Nov 2021 to Current)

Project: dbRiskStore (June 2025 to Current)

Description: dbRiskStore is to provide a single access solution for all risk and valuation data feeding every downstream function, both near real-time and historical, described in the consistent language, the Risk Logical Data Model. dbRiskStore provides a source of the pricing dictionaries used in end of day valuations

Tools / Technologies Used: Java 8/11/17, Spring Boot, GIT, Putty, Oracle, Linux, Gradle, Maven, Jenkins, TeamCity, Junit, Cucumber, Mockito, J2EE, Spring Data JPA, SQL, REST, Server Grid, Log4j, Oracle 19c, Geneos.

Roles and Responsibilities:

Enhancement and maintenance of Java and Scala based services.

Integration of live securities updates using REST endpoints and IBM MQ and Solace.

Implementation of Java services based on REST APIs.

Support for production issues to ensure production stability

Implementation of CI\CD pipeline base on Jenkins

Project: Spire (Nov 2021 to May 2025)

Description: Spire is a Trade Capture System developed to replace the existing Security Lending Stack. All trades booked in Spire are subject to Regulatory Reporting. Trades are assessed from Jurisdiction Eligibility point of view. Regulatory Feed is an application which receives trade from Spire and enriches the trade, check if a trade is eligible and then sends the trade to downstream system which is used for Regulatory Reporting of these trades.

Tools / Technologies Used: Java 8/11/17, Spring Boot, GIT, Putty, Oracle, Linux, Gradle, Maven, Jenkins, ServerGrid,TeamCity, Junit,Cucumber, Mockito, J2EE, Spring Data JPA,SQL, REST, Server Grid, Log4j,Oracle 19C,Geneos.

Developed and maintained Spring Boot-based applications for trade lifecycle for Prime Brokerage System, Java-based integration solution for Spire that consumes reference data from Mercury and IRDS systems, utilizing MQ for asynchronous messaging and RESTful APIs for seamless data delivery to Spire

Module owner of Data Service and File manager.
Integrated live securities updates using REST endpoints and IBM MQ and Solace.
Delivered the continuous enhancement and bug-fixes
Implemented services to consume REST APIs.
UI automation via Selenium for vendor Application, reducing manual testing time by 60% and increasing test coverage across key user workflows.
Support for production issues for the continuity of Business processes.

Infosys Technologies, Cary NC, USA

Role: Technology Analyst (Feb 2019 to May 2021)

Client: Verizon, Cary NC, USA

Project: SPIM (Oct 2019 to May 2021)

Description: Service profile inventory management (SPIM) is a middleware telecommunication management system (provisioning system used by telecom provider to manage vendor services).

Tools / Technologies Used: Java, Spring MVC, Spring Boot, Oracle, JSON, Web Services, Eclipse IDE, STS, IBM MQ Explorer, Rfhutil, Git, Putty, WinSCP.

Roles and Responsibilities:

Development of Java based components (Spring boot).
Maintenance and bug fixing.
Support for product issues from the Order managers.
Unit testing

Project: VZBII (Oct 2020 to May 2021)

Description: Verizon Business Information Integrator (VZBII) is a reporting system used to generate various billing reports for the down streams.

Tools / Technologies Used: Java, Spring MVC, Spring Boot, Oracle, Json, Web Services, Eclipse IDE, STS, WebSphere Application server, CONNX, IBM MQ Explorer, Putty, WinSCP.

Roles and Responsibilities:

Development of Java based components (Spring boot).
Maintenance and bug fixing.
Support for product issues from the Order managers.
Unit testing.

Client: Conduent, USA

Project: CAP (Feb 2019 to Oct 2019)

Description: CAP is a micro service-based cloud platform that allows customers to quickly compose business workflows for efficiency, accuracy, and business insight to power businesses to the next level. By simply starting from a large library of pre-built, best practice business process models, users can quickly automate key business processes in a matter of hours, realizing immediate value from the automation. Also implemented accessibility feature in this application.

Tools / Technologies Used: Angular7, Visual Studio Code, Typescript, HTML5, Angular CLI

Roles and Responsibilities:

Worked as a team member for design and develop CAP architecture using Angular 7.0 framework, Visual Studio Code, Angular CLI, Typescript, Bootstrap, JSON, HTML5, SCSS and Unit testing.

**Mais Technologies, Bangalore, India (From July 2016 to Oct 2016) &
Taurus Hard Soft Solutions Pvt Ltd, Bangalore, India (From Mar 2016 to July 2016)
Role: Software Engineer**

Project: SConnect

It's a communication platform meant for schools, colleges and other institutions, that lets the management, staff, students and other stakeholders communicate with each other seamlessly and provides various useful tools like attendance marking and reports, circulars, schedules, events. This platform consists of a smart phone application, web application and web services.

Tools / Technologies Used: Android SDK, Java, Spring MVC, Angular JS, HTML JSP, Json, REST Api, Plugins , PostgreSQL, SQLite, Android Studio, Eclipse IDE, Apache Tomcat 9.

Roles and Responsibilities:

Development of Android school app.

Development of web application by using Angular JS, JSP.

UI Designing.

Unit testing.

**Data Template Infotech, Bangalore, India (From Feb 2015 to Apr 2015 & From Oct 2011 to Nov 2012)
Role: Software Engineer**

Project: UdaymPower

Objective of the project is to prevent, detect, & reduce the risk of diabetes and hypertension and to improve the treatment and management of individuals with either condition by implementing a comprehensive diabetes prevention and management program in the selected sites of PHFI.

The application works as a low-cost technology supported Decision Support System (DSS) which collects data using android-based tablets and synchronize it to a centralized server. The information can be reviewed later from either the tablet or from server.

Tools / Technologies Used: Android SDK, Java, Spring MVC, HTML JSP, Json, REST Api, Plugins, PostgreSQL, SQLite, Android Studio, Eclipse IDE, Apache Tomcat 9.

Roles and Responsibilities:

Development Android application.

Implementation of Risk and Drug algorithms.

Development of web application by using (Java, JSP, Angular JS).

UI Designing.

Unit testing

Project: SIMCARD

Description: The specific aim is to evaluate the effects of implementing a simple low-cost cardiovascular management program for high-risk individuals, delivered by primary care providers (PCPs) or community health workers (CHWs). One component of the low-cost management program includes the Electronic Decision Support System (EDSS). Wherein the data is collected by android based mobile application and

synced to a server, this information can be retrieved for review by the physician using a net-book to refer to the Decision Support System for appropriate management plan.

Tools / Technologies Used: JavaScript, HTML and CSS.

Roles and Responsibilities: Contributed as a team member for the development and maintenance of the application.

Project: mPower

Description: Application to integrate software-based decision support systems (DSS) to aid physicians and CHWs (Community Health Workers) in practicing evidence-based medicine for Cardio Vascular Diseases (CVDs)/diabetes in order to improve the quality of care.

Tools / Technologies Used: PhoneGap, JavaScript, HTML and CSS

Roles and Responsibilities: Worked as a team member for the development and maintenance of the application. Responsibilities included incorporating post release modifications and changes.
