Skills

Certifications: AWS Certified Solutions Architect Associate (SAA-03)

Programming and Scripting: SQL, Apache Kafka, Apache PySpark, Python (Pandas, NumPy, SciPy, Matplotlib, Seaborn, Plotly, PyArrow, PySpark, PyTorch, Scikit-learn, Keras, TensorFlow), R, Angular, JavaScript, TypeScript, HTML, CSS

Developer Tools: Apache Airflow, Docker, Git, Power BI, Tableau, Plotly, AWS QuickSight, Looker, Visual Studio

Databases & Cloud: AWS, S3, EC2, AWS SDK, AWS Lambda, Glue, Redshift, Kinesis, Snowflake, Azure, Azure synapse analytics, azure databricks, PostgreSQL, Oracle, Microsoft SQL Server, MySQL, PL/SQL, NoSQL, MongoDB, DynamoDB, Neo4j

Other skills: SDLC, Agile, Scrum, waterfall

Education

Indiana University

Master of Science in Data Science

Coursework: data visualization, data mining, advanced database, data warehousing, applied machine learning, applied algorithms, statistics

Shri Ramdeobaba College of Engineering

Bachelor of Engineering in Information Technology

Aug 2022 – May 2024

Bloomington, Indiana

Aug 2018 – May 2022

Nagpur, India

Experience

Fitverse

Data Analyst

May 2021 – Aug 2022

Pune, India

- Streamlined data collection and cleaning using Python and SQL reducing processing time by 55%. Applied data analytics to detect user behaviors, resulting to 23% improvement in suggestions to cater customer needs.
- Engaged to create parts of fitness dashboards using PowerBI for data solutions while following compliance standards to make data-driven decisions, resulting in 27% increase in customer satisfaction with the dashboard.
- Achieved an 12% reduction in inventory costs using Gradient Boosting, by optimizing forecasting on customer demand aiding strategic allocation of resources to cross-functional teams, leveraging predictive models.

Shri Ramdeobaba College of Engineering

Writing Lead

Aug 2019 – May 2021

Nagpur, India

- Served as Writing Lead for 2 years, documenting 30+ events, drafting official reports, letters, invitations, and emails, ensuring clear and effective communication.
- Managed and coordinated a team of 10+ members, driving project completion and maintaining high standards of work quality.

Projects

YouTube Data Analytics & Engineering Pipeline | *AWS, PySpark, Tableau*

- Engineered a data pipeline on AWS S3, Lambda, and Glue for PySpark. automated ETL (Extract, Transform, Load) workflows in Glue Studio for transformation of raw data into parquet resulting 33% lower processing time and 68% reduction in storage costs.
- Enhanced query performance by more than 30% through data cataloging using Glue Crawlers and Athena. Visualized derived data in Tableau to derive insights and explore trends.

HealthCare Analysis | *PowerBI*

- Developed report in Power BI, implementing data modelling and utilizing patient data encompassing over 450,000 patient records.
- Designed interactive visualizations enabling filtering by case type, date range, required specialty, and patient age, integrating key performance indicators (KPI) based on median and mean values across 75+ specialties.
- Promoted colorblind-friendly design principles for enhanced accessibility and a detailed view page for data analysis.

Spotify Visualization | *Python, Plotly, Spotify API, NetworkX*

- Crafted interactive dashboard with Plotly, featuring 10 visualizations containing Distribution, Scatter and Radar Plots, Network Maps and Treemaps to represent various data visualizations.
- Leveraged the Spotify API to seamlessly perform ETL, enhancing the dashboard's functionality by comparing 2 playlists across 9 underlying metrics like energy, popularity, tempo and more.
- Identified intricate musical connections and associations in artist collaboration networks employing NetworkX library, extracting valuable insights that boosted playlist curation effectiveness by 65%.

Fantasy Sports Prediction | *Python, logistic regression, k-means*

- Built data pipeline to create custom data from ball-by-ball player performances. This data served to Performance-Based scoring model using Logistic Regression to predict fantasy cricket team.
- Executed data cleaning, preprocessing, feature engineering, and normalization to enhance accuracy and reliability.
- Deployed Cluster Prediction using K-means, tailored for player positions and performance, to balance team composition with errors ranging from 27% to 30% in real-world Cricket matchups.
