SUMMARY

Accomplished Senior Business Analyst with over 4 years of experience in leveraging data to drive business insights and strategic decision-making. Proven expertise in SQL, Python, Tableau, and machine learning techniques to optimize marketing and product strategies. Adept at leading cross-functional teams, generating actionable insights, and driving corporate growth. Skilled in advanced AI technologies, including neural networks, natural language processing (NLP), and predictive analytics. Demonstrated ability to deliver high-impact solutions in complex IT environments, ensuring data integrity and accuracy. Excellent communicator with a track record of presenting complex data findings to both technical and non-technical stakeholders.

EXPERIENCE

Senior Business Analyst, Nordstrom

2022-2024

- Led a team of 3 analysts to identify and implement marketing improvements, boosting client leads by 17% through data-driven strategies.
- Analyzed and interpreted data from over 30,000 users using SQL, Python, and advanced statistical techniques to inform strategic decisions, doubling app engagement and reducing drop-offs by 25%.
- Utilized Tableau and Power BI to create and redefine KPIs, resulting in a 35% increase in landing page conversion rates.
- Supervised 5+ cross-functional teams to identify opportunities for user acquisition and retention, leading to a 20% increase in customer retention.
- Generated complex, automated reports from various databases, providing actionable insights and data visualizations to senior management.
- Pioneered new data visualization techniques, increasing stakeholder engagement and understanding of key metrics.
- Conducted predictive modeling and machine learning analyses using Python to forecast trends and improve business strategies.
- Implemented A/B testing frameworks and designed experiments to optimize marketing campaigns, improving ROI by 15%.
- Developed and maintained ETL pipelines to ensure data integrity and accuracy across multiple platforms.
- Collaborated with IT and data engineering teams to enhance data infrastructure and streamline data processing workflows.
- Provided training and mentorship to junior analysts, fostering a collaborative and knowledge-sharing environment.

Data Analyst, Appriss

2021-2022

- Developed and maintained a robust data and reporting infrastructure using SQL, Tableau, and Power BI, providing real-time insights into key performance indicators (KPIs).
- Designed and implemented A/B testing frameworks, improving conversion rates by 21% and reducing churn by 14% through data-driven decision-making.
- Utilized SQL, SAS, Tableau, and Power BI to perform comprehensive data analysis and business intelligence, uncovering trends and insights that informed strategic initiatives.
- Managed and optimized ETL processes for major retailers, ensuring data accuracy and consistency using Microsoft Azure and Greenplum.
- Created custom Python scripts and functions to automate data processing tasks, enhancing efficiency and reducing manual workloads.
- Applied machine learning techniques, including clustering and classification algorithms, to refine data processing and generate predictive insights.
- Conducted data quality assessments and implemented data governance best practices, ensuring data integrity and reliability across all systems.
- Collaborated with cross-functional teams, including marketing, sales, and product development, to identify and capitalize on data-driven opportunities.
- Prepared and delivered detailed reports and dashboards to stakeholders, translating complex data into actionable insights.
- Led training sessions and workshops for team members and stakeholders on data analysis tools and methodologies, fostering a data-centric culture.

Data Analyst Intern, Chapman University

2019-2021

- Conducted in-depth analysis of user behavior data for the 'Calm' app, identifying patterns and trends to enhance user experience and engagement using SQL and Python.
- Developed predictive models utilizing machine learning algorithms such as Neural Networks and Random Forest, resulting in a 10% improvement in app usage accuracy.
- Applied statistical methods, including regression analysis and hypothesis testing, to analyze and interpret complex data sets.
- Created data visualizations and interactive dashboards using Tableau and Excel to present insights and recommendations to stakeholders.
- Automated data processing tasks using Python scripts, improving efficiency and accuracy in data handling and reporting.
- Coordinated with cross-functional teams to streamline project management, effectively communicating findings and resolving development issues.
- Prepared detailed reports summarizing key findings and actionable insights for senior management and academic researchers.
- Utilized A/B testing frameworks to design and evaluate experiments, optimizing features and functionalities of the 'Calm' app.
- Gained hands-on experience with ETL processes, extracting, transforming, and loading data from various sources for analysis.

Financial Analyst, TD Bank

2017-2019

- Analyzed financial data to identify trends, opportunities, and risks, providing actionable insights to senior management to inform strategic decisions.
- Developed and maintained financial models using Excel, enhancing the accuracy and efficiency of financial forecasting and reporting.

- Conducted variance analysis to compare actual performance against budgeted figures, identifying key drivers and areas for improvement.
 - Collaborated with cross-functional teams to support budgeting, planning, and financial analysis processes, ensuring alignment with organizational goals.
 - Built strong relationships with customers, promoting products and services that align with their financial goals, resulting in a 20% increase in sales performance.
 - Prepared detailed financial reports and presentations for senior management, translating complex financial data into clear, actionable insights.
 - Utilized SQL to extract and analyze data from financial databases, improving data accuracy and decision-making processes.
 - Ensured compliance with financial regulations and internal policies, conducting regular audits and assessments to identify and mitigate risks.
-

SKILLS

- Programming Languages: Python, R, SQL, Julia, MATLAB
 - Data Analysis Tools: Tableau, Power BI, Excel, SAS, ETL/ELT
 - Techniques: Data Visualization, Predictive Modeling, Machine Learning, Quantitative Analysis, Statistical Analysis, Data Mining, Big Data Analysis, Regression Analysis, Hypothesis Testing, Time Series Analysis
 - AI/ML Technologies: Neural Networks, Natural Language Processing (NLP), Deep Learning, Supervised and Unsupervised Learning, Random Forest, Support Vector Machines (SVM), K-Means Clustering, Decision Trees, Ensemble Methods
 - Database Management: MySQL, PostgreSQL, Microsoft SQL Server, MongoDB, NoSQL
 - Software and Tools: Microsoft Azure, AWS, Hadoop, Spark, Git, Jupyter Notebooks, Apache Kafka
 - Methodologies: Agile, SCRUM, A/B Testing
 - Soft Skills: Problem Solving, Leadership, Collaboration, Communication
-

PROJECTS

Bitlearn Development Project

- Utilized advanced machine learning algorithms to build a predictive Bitcoin pricing model, aggregating real-time prices and tweets from Twitter.
 - Scraped Twitter data using a 'Get old tweets' scraper, then used the 'TextBlob' API to classify their polarity.
 - Predicted Bitcoin prices using SVM, Random Forest, XGBoost Regressor, and LSTM.
-

EDUCATION

Master of Computation and Data Sciences

Chapman University, Orange, CA, 2021

Received Merit Scholarship

Bachelor of Computer Sciences

University of British Columbia, Vancouver, BC, 2019
