kiaramasurkar20@gmail.com | +1 (551) 371 2836 | Hoboken, NJ | [LinkedIn-Kiara](#)

Analytical and detail-oriented Business & Data Analyst pursuing an M.S. in Engineering Management at Stevens Institute of Technology. Experienced in Power BI (DAX, Power Query), SQL, Python, and Excel for end-to-end analytics - data cleaning, modeling, visualization, and automation. Skilled in Agile/Scrum collaboration, requirement gathering, and translating business needs into actionable dashboards and insights. Passionate about driving data-driven decisions and process transformation across business and technology teams.

SKILLS

Analytics & BI: Power BI (DAX, Power Query), Tableau, SQL, Excel (Pivot Tables, VLOOKUP, Power Pivot), Python (pandas, NumPy), Data Modeling, EDA, Data Cleaning, Data Validation, Jira, Trello, Confluence

Business & Process: Requirement Gathering, Stakeholder Engagement, Agile & Scrum Practices, KPI Design, Process Optimization, Documentation, Reporting Automation, Business Process Mapping, , Process Optimization, Workflow Analysis, Root Cause Analysis

Other Tools: GitHub, Figma, Canva, MS Office Suite, HTML/CSS

PROFESSIONAL EXPERIENCE

Stevens Institute of Technology - Data & Product Analyst | Hoboken, NJ **May 2025 - Present**

- Led automation of asset-tracking workflows, replacing outdated spreadsheets with a scalable PowerBI based platform that significantly cut manual reporting effort by 75% overall.
- Built fully interactive Power BI dashboards using advanced DAX measures and optimized Power Query transformations to proactively track KPIs across IT and academic operations more effectively.
- Designed data models integrating multiple systems, enabling one click performance reports and error-free validation.
- Partnered with cross-functional stakeholders in Agile sprints, translating evolving requirements into clear user stories and consistently delivering incremental, high-quality dashboard releases.
- Documented data sources, calculations, and logic to maintain transparency and support data governance standards.

Affygroup Films - Marketing Data Analyst | Mumbai, India **May 2023 - Aug 2023**

- Performed comprehensive data cleaning and EDA on campaign datasets using SQL and Python; identified key engagement drivers ultimately increasing overall marketing ROI by 30%.
- Created dynamic Power BI dashboards to monitor campaign spend, CTR, and conversion trends in real time, significantly improving marketing visibility and resource allocation efficiency.
- Automated recurring reports via Excel macros and SQL queries, reducing manual effort by 40%.
- Presented clear, actionable insights and findings to senior marketing leaders, demonstrating strong data storytelling, persuasive communication, and strategic business decision-making support.

AIIESEC in Mumbai - Business Strategy & Analytics Lead | Mumbai, India **Aug 2021 - Jan 2023**

- Managed an analytics team of 10+ members, built comprehensive Excel dashboards to track KPI performance across departments, significantly enhancing overall leadership decision-making speed by 25%.
- Led multiple stakeholder sessions to define detailed data requirements and establish process KPIs, effectively aligning leadership reporting practices with broader organizational objectives.
- Documented workflows and reporting standards, laying the foundation for future BI integration using Power BI.

EDUCATION

Masters in Engineering Management **Expected Graduation: May 2026**

Stevens Institute of Technology, Hoboken, New Jersey GPA : 3.89/4

Relevant Courses: Data Analytics, Process Optimization, Project Management, Decision & Risk Analysis, Digital Innovation

Bachelors of Technology in Information Technology with Minors in Management **July 2024**

K.J. Somaiya College of Engineering, Mumbai, India GPA : 3.8/4

PROJECTS

Workation Locator - Decision Support System (DSS) using Python and Multi-Attribute Utility Theory **Sept - Dec 2024**

- Built a Python-based DSS using Multi-Attribute Utility Theory to score and rank 20+ locations, applying weighted decision factors (cost, safety, connectivity) for 35% more accurate recommendations.
- Conducted data cleaning, normalization, and statistical weighting to create a transparent scoring model with interpretable visual outputs for improved decision clarity.

Predicting Micro and Macro Economy of a Country Using Machine Learning Algorithms **Sept 2023 - July 2024**

- Developed Random Forest and Neural Network models on 10,000+ IMF/World Bank records, forecasting GDP and inflation with 99.4% accuracy, outperforming baseline models by 40%.
- Engineered a validated end-to-end data pipeline with preprocessing, normalization, and cross-validation to ensure reliable, high-quality macroeconomic predictions.

Case Study on Crisis Management : The financial and image crisis of Vijay Mallya & his Kingfisher Empire **Nov - Dec 2022**

- Analyzed 5+ years of detailed financial statements, debt structures, and reputational data to identify critical governance failures contributing to Kingfisher's eventual collapse.
- Proposed comprehensive, data-backed risk-mitigation and continuity strategies that could have meaningfully reduced operational and financial exposure by an estimated 20–25% overall.
