EDUCATION

Stony Brook University, Stony Brook, NY

August 2021- May 2025

B.S in Computer Science & Applied Mathematics and Statistics

GPA: 3.70/4.00

Related Coursework: Software Engineering | Database Systems | Fundamentals of Software Development

SKILLS

- **Programming Languages:** C#, Python, Java, C, JavaScript, R, SQL, HTML, CSS, OCaml
 - **Technologies:** .NET, Spring Boot, React, D3.js, Node.js, Express
 - **Tools:** MySQL, MongoDB, Git, Figma, Microsoft Office, Jupyter, Power BI, Tableau, Excel
 - **Miscellaneous:** OOP, Data Visualization, UI/UX Design, Statistical Analysis, Modeling, Agile, RESTful APIs
-

LEADERSHIP / WORK EXPERIENCE

Software Engineer - BBT LLC, Wichita, KS

September 2024 - Present

- **Architected a complete SaaS licensing platform** for financial trading software, generating \$1K+ revenue through automated license provisioning and hardware-fingerprint anti-piracy protection.
- **Built enterprise-grade** trading software using **C#/.NET Framework**, leveraging **OOP principles**, event-driven architecture, **custom data structures**, and **multi-threading**, for processing live market data and sending signals with **sub-millisecond latency**.
- **Quantified market outcomes** to allow **1,000+ traders** to make data-backed decisions by analyzing conditions where price had an **80% probability of reaching a new target**, achieving a **10% capital gain** in some cases.

Data Analyst Assistant - Stony Brook University, NY

February 2024 - Present

- **Uncovered significant disparities** in marginalized groups to inform **targeted resource allocation** by analyzing **4M+** survey responses using **Python and Google Cloud Storage**, ensuring an efficient workflow.
- **Outlined stakeholder requirements and categorized 40 survey questions**, enabling domain-specific data wrangling and efficiently delivering focused insights on gestational diabetes.

Teaching Assistant (Data Structures) - Stony Brook University, NY

July 2023 - August 2023

- **Assisted 30+ students** in understanding complex data structures, debugging code, and completing projects.
-

PERSONAL PROJECTS

Dual State Voting Analysis | React, Java, JavaScript, NoSQL

September 2024 - December 2024

- **Designed and implemented RESTful API endpoints in Java** to efficiently serve processed voting data to the front-end, ensuring real-time interactivity.
- **Created an interactive drill-down dashboard** using **React and NoSQL**, allowing potential **lawmakers to observe trends** relevant to redistricting and voter behaviour, supporting **data-driven policymaking**.

Fake Stack Overflow | MongoDB, Express.js, React, Node.js, Javascript

August 2023 - December 2023

- **Replicated Stack Overflow using the MERN stack**, creating an end-to-end website experience.
 - **Incorporated user account creation**, keeping their information safe using bcrypt for password hashing as well as session management for a safe and seamless browsing experience.
-

Interests: In my spare time, I enjoy: weight lifting, vocals, philosophical discussions, and being a foodie.
