EDUCATION

Purdue University

B.S. in Computer Science and Statistics; Minor in Economics

Aug. 2021 – May 2025

West Lafayette, IN

EXPERIENCE

Autogram

Founder, Software Engineer

May 2024 – Present

Remote

- Built a cloud-based outbound lead generation system using **Python** to automate messaging workflows and track engagement, enabling **100K+ messages** across 20+ campaigns and increasing revenue by **\$50k+**.
- Developed full-stack systems with **React and Supabase (PostgreSQL, Auth, Storage)**, powering dashboards used by **25+ users** to monitor performance, manage follow-ups, and track thousands of leads in real time.
- Deployed and maintained infrastructure on **DigitalOcean**, automating server provisioning and monitoring via **Bash, SSH, and CRON** to maximize server uptime and streamline maintenance.

Carrier Global Corporation

AI Engineer

May 2024 – Present

Atlanta, GA

- Used **Python** to migrate **300K+** SAP documents into **S3** and engineered a continuous-sync pipeline with change detection and retries, keeping datasets audit-ready and eliminating manual refresh cycles.
- Trained production **NLP** classifiers with **Transformers** and **scikit-learn**, integrated queueing/decision rules, and deployed automated routing for warranty claims, shortening triage time and reducing handoffs.
- Built an **OpenAI**-powered extraction workflow for part specifications with validation and schema mapping, standardizing metadata and saving **300+ hours/year** of manual entry.

AI Engineering Intern

Syracuse, NY

- Built a clustering model in **Python (scikit-learn)** to segment **200K+ homes** by energy usage; results shared in **Power BI** dashboards used by the analytics team.
- Generated hourly energy estimates from daily data using a Random Forest Regressor with weather features (temperature, humidity), leveraging **Pandas** for preprocessing and improving forecast granularity by **24x**.
- Built forecasting tools with XGBoost and **NumPy** to predict energy demand spikes, improving planning accuracy by **18%** and reducing excess allocation by **12%**.

Data Mine - Purdue University

Corporate Researcher

Aug 2022 – Jan 2023

West Lafayette, IN

- Collaborated with **Tesla** engineers through a Purdue University research partnership to build a proof-of-concept system for classifying hardware failures using diagnostic reports and system logs.
- Used **pandas** and **NumPy** to preprocess and analyze time-series data, applying clustering techniques to uncover recurring failure patterns and trends across multiple factory machines.
- Implemented and tested LSTM-based forecasting models in **TensorFlow** to predict failure events, exploring their potential for integration into a larger predictive maintenance pipeline.

PROJECTS

AI Call Center | Python, Flask, ElevenLabs, OpenAI, Supabase, React

Jan 2025 – July 2025

- Built a full-stack AI calling platform with **Flask, React, and Supabase** to automate **100+** personalized sales calls per day.
- Used **OpenAI** and **ElevenLabs** to generate dynamic call scripts and synthesize natural-sounding voice calls.
- Added evaluation and lead-scoring logic based on tone, language, and custom rules to rank and route prospects.
- Ran a **1,000-call** pilot with a DFW property owner, yielding **50+ qualified leads** and structured follow-ups.

WhatsApp Outreach Platform | React, MongoDB, OpenAI, Meta API, Stripe, UPI

Feb 2023 – Dec 2023

- Built a WhatsApp outreach platform on **React** and **MongoDB** to manage campaigns and conversations for small businesses.
- Integrated the **Meta Business API** to support automated replies, lead capture, and session-based messaging flows.
- Enabled bookings and confirmations via **Stripe (U.S.)** and **UPI (India)** payments directly in the conversation.
- Used **OpenAI** to generate smart replies and handle FAQs, reducing repetitive support work for owners.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, C++, SQL, HTML/CSS, Bash

Frameworks: React, Next.js, Node.js, Express, Flask, FastAPI

Developer Tools & Infra: Git, Docker, Supabase, MongoDB, DigitalOcean, GCP, AWS

Libraries & APIs: pandas, NumPy, Selenium, Requests, OpenAI API, Stripe API, Meta Business API
