PROFESSIONAL SUMMARY

Versatile .NET Developer with over 3 years of experience in designing, developing, and deploying efficient, scalable, and reliable applications. Proficient in C#, .NET Framework, ASP.NET, and modern JavaScript frameworks such as React.js and Angular, delivering high-performance web applications. Skilled in full-stack development, RESTful API integration, and implementing robust security measures using Spring Security and OAuth2 protocols. Adept at leveraging Test-Driven Development (TDD) and async/await patterns to ensure high-quality, responsive code and optimized database operations using Entity Framework and ADO.NET. Strong collaborator and mentor, providing technical guidance to teams and contributing to continuous improvement through code reviews and process optimization.

TECHNICAL SKILLS

Programming Languages:	C#, Java, JavaScript (ES6+), TypeScript, Python, C, C++
Web Technologies:	HTML5, CSS, Bootstrap, JSON, XML
Frameworks:	.NET, .NET Core, ASP.NET, Blazor, LINQ, React.js, Angular, Node.js, Spring Boot, Django, Cypress, Spring Security, Selenium, D3.js, REST APIs
Cloud & DevOps:	Azure, Azure DevOps, AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, CI/CD
Event-Driven Systems:	Kafka, Event-Driven Architecture
Databases:	SQL Server, Entity Framework, ADO.NET, SQL, MongoDB, Oracle, PostgreSQL, NoSQL, PL/SQL, T-SQL, Object-Relational Mapping.
J2EE Technologies:	Servlets, JSP, JavaBeans, JDBC
Testing Frameworks:	xUnit, Nunit, Jest, JUnit, Jasmine, Karma, Cypress
Application Servers:	IIS (Internet Information Services), Apache Tomcat, Oracle Cloud Infrastructure, Google Cloud Platform
Methodology:	Software Development Life Cycle, Agile, Scrum, Jira, Confluence, Power BI, Test-Driven Development (TDD), Kanban
Development Tools:	Git, Postman, Linux, Visual Studio, Visual Studio Code, IntelliJ, Nexus, ReSharper, Google Analytics

EDUCATION

University of North Carolina, Charlotte (GPA: 3.8/4)

Aug 2023 – Dec 2024

Master of Science in Computer Science

ACADEMIC PROJECTS

- Adaptive Resource Management for Analysing Video Streams from Globally Distributed Network Cameras.
- Identifying Malicious User Accounts-Social Networks Based on Online Promotions.
- Digital Library management system.
- Predictive Modelling of Loss Ratios in Insurance Portfolios.

CERTIFICATIONS

- Microsoft Certified Security, Compliance, and Identity Fundamentals.
- Microsoft Certified Azure Fundamentals.
- Problem Solving using Computational Thinking certificate from Coursera.
- Machine Learning for All certificate from Coursera.

WORK EXPERIENCE

Accenture | Custom Software Engineering Analyst | February 2023 - August 2023

- I developed robust and scalable applications using **C#**, leveraging object-oriented programming principles, **LINQ**, and asynchronous programming to implement efficient business solutions.
 - I built and maintained web applications using **ASP.NET Core**, focusing on performance optimization, scalability, and security.
 - I utilized Entity Framework to streamline database interactions, employing both Code-First and Database-First approaches, and implemented middleware to create modular and reusable components.
 - I designed and optimized relational databases in SQL Server, writing complex queries, stored procedures, and triggers to meet business requirements. I used **Entity Framework** extensively for seamless database integration and query performance optimization through **LINQ-to-SQL**.
 - I deployed and managed cloud-based applications using Microsoft Azure, working with services like App Services, Azure Functions, and **Azure SQL**.
 - I also created and optimized **CI/CD** pipelines in **Azure DevOps**, ensuring efficient and reliable application deployment.
 - I ensured clean and maintainable codebases by consistently applying design patterns like **MVC**, Dependency Injection (**DI**), and Singleton in my solutions.
- I architected web applications using the MVC pattern to separate concerns, improve readability, and enhance maintainability.
- I utilized **Git** for version control, maintaining clean and organized code repositories. I collaborated with teams using **GitHub**, **GitLab**, and Azure DevOps, adhering to Git workflows like **GitFlow** to manage features, bug fixes, and releases efficiently.

Accenture | Custom Software Engineering Associate | December 2020 - February 2023

- I had end-to-end functional knowledge of **OP/MW, FMS, and PDS** to deliver regular **AO** deliverables. For Incident Management, maintained 100% **SLA** and closed high-level incidents within 2 days of creation, reducing dependency.
- Identified recurring incidents and raised defects for Service Request Management, achieved Key performance indicators and completed requests within 2 days. Performed and maintained daily critical activities such as **Nightly** batch job, **MDP**, **AutoRenew**, Reconciliations, and **Mobile App/CWS** monitoring & troubleshooting and addressed essential failures of the job with priority.
- Generated automated reports for exceptions without delay for all alerts, applied workarounds on time and validated them for Workaround/Execution/Reduction. Delivered finance reports with accuracy and validation for **Finance** Deliverables, work orders and CNs within the given timelines.
- For **Deployment** Support, I supported Enable/disable activities and configured Launch pages for all major/minor releases. I documented every new process for Documentation Support and modified existing documents with the latest information.
- I drove and delivered ad-hoc activities handed over from Onshore provided the right handovers on the investigated **incidents** and discussed the next actions.
- Analyzed current applications to identify improvements required, and made proposals for upgrades, and enhancements needed for better efficiency.
- Conducted multiple **test runs** on applications before project completion to eliminate issues and ensure applications ran smoothly, carried out the unit and integration testing before application launch.
- Worked on low-level designing, coding, unit and regression testing, and deployment phases of **Software Development Life Cycle**.
- Performed data analysis and developed test plans for major work deliverables.
- Solved application-related incidents, **service requests**, and ad hoc changes within the SLA, provided data and supported financial deliverables on demand.
- **Tracked** all the jobs, and alerts and reacted with priority if any issues were in place, maintained a smooth flow of transactions from the customer's website or device to the customer. Also Made it easy for commuters to pay their fare with a simple tap of the card while travelling within and between the **transit** system
