

SHIV SHAH

Software Engineer | 501-226-6564 | shiv20shah2000@gmail.com | CA | <https://www.linkedin.com/in/shiv-shah-0711b1210/>

SUMMARY:

Software Engineer with 4 years of experience in designing, developing, and deploying scalable web applications and microservices for enterprise clients. Proficient in leveraging Java, Python, JavaScript, and TypeScript alongside frameworks like Spring Boot, React.js, Node.js, and Fast API to deliver high-performance solutions. Skilled in cloud technologies (AWS, Azure) and DevOps tools (Docker, Kubernetes, Jenkins) to ensure seamless deployment and scalability. Adept at optimizing databases such as MySQL, Snowflake, and NoSQL for efficient data management and analytics. Experienced in integrating AI-driven solutions, including APIs, Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG) for enhanced application functionality.

SKILLS:

Methodology: SDLC, Agile, Waterfall
Languages: C#, C++, Core Java, SQL, Python, JavaScript, TypeScript, Java, Swift, Go
Frameworks: Spring MVC, Spring Boot, Spring Security, Microservices, JSF, Hibernate, JPA, React.js, Node.js, Next.js, Django
IDEs: NetBeans, VS Code, Eclipse
J2EE Technologies: Servlets, JSP, JSTL, JavaBeans, JDBC
Tools: Maven, Gradle, Jenkins, Docker, Kubernetes
Web Technologies: HTML, CSS, Bootstrap, jQuery, Ajax, JSON, XML
DevOps and Cloud: AWS (EC2, S3, RDS, Lambda, DMS, SNS, SQS, Elasticsearch), Azure, GCP, Docker, Jenkins, Kafka
Databases: MySQL, PostgreSQL, NoSQL, Snowflake
AI Technologies: AI APIs, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG)

EDUCATION:

Master of Science in Computer Science – Specialization in Software Engineering Stevens Institute of Technology, Hoboken, NJ	May 2024
Bachelor in Computer Science Navrachana University, Vadodara, Gujarat	April 2022

EXPERIENCE:

ServiceNow, CA Software Engineer	Nov 2023 – Current
---	---------------------------

- Designed and implemented scalable web applications using Spring MVC and Spring Boot, integrating Hibernate for efficient ORM, resulting in a 20% improvement in data retrieval performance for enterprise-level clients.
- Developed RESTful APIs with Java and JDBC, enabling seamless communication between front-end and back-end systems, enhancing application modularity, and reducing latency by 15%.
- Leveraged AWS EC2 and S3 for deploying and managing cloud-based infrastructure, ensuring high availability and scalability for critical business applications.
- Designed and implemented Retrieval-Augmented Generation (RAG) pipelines, combining vector databases and LLMs to deliver contextually accurate responses, achieving a 15% increase in user satisfaction in prototype applications.
- Built a chatbot prototype using LLMs and RAG, integrating external knowledge bases via Pinecone for dynamic query resolution, resulting in a 30% improvement in response relevance for technical queries.
- Implemented front-end features using React.js and jQuery, creating dynamic and responsive user interfaces that improved user engagement by 30%.
- Utilized AI APIs for text generation and classification, incorporating tools like OpenAI and Google Cloud NLP to enhance content creation workflows, boosting productivity by 18% in experimental tools.

Neon IT Systems, India Software Engineer	April 2020 – Aug 2022
---	------------------------------

- Architected and deployed microservices-based applications using Spring Security and Node.js, enhancing system modularity and enabling independent scaling of services, improving throughput by 18%.
- Developed high-performance backend services using Python and Fast API, integrating Kafka for real-time data streaming and supporting high-throughput data pipelines for enterprise clients.
- Utilized Docker and Kubernetes for containerization and orchestration, ensuring zero downtime deployments and reducing infrastructure costs by 15%.
- Built interactive front-end applications with Next.js and TypeScript, implementing AJAX for asynchronous data loading, resulting in a 25% reduction in page load times.
- Managed CI/CD pipelines using Jenkins and Gradle, automating build and deployment processes, which increased deployment frequency by 40%.
- Worked with Snowflake and NoSQL databases to design and implement data warehousing solutions, enabling efficient data analytics and reporting for business intelligence teams.
- Employed Waterfall methodology for legacy system migrations, ensuring thorough requirement analysis and documentation, achieving 100% compliance with client specifications.
- Leveraged Azure cloud services, including Azure Functions and Cosmos DB, to build serverless applications, reducing operational overhead by 20%.
