## **Data Analyst | Business Intelligence | SQL, Python, Power BI | Data Visualization & Reporting**

Data Analyst with 3 years of experience in business intelligence, data visualization, and backend development. Skilled in SQL, Python, and Power BI with a strong track record of designing scalable data pipelines, building interactive dashboards, and automating workflows to drive efficiency. Experienced in supporting decision-making for financial services, IoT, and enterprise clients by delivering accurate insights and optimizing processes. Adept at working with cross-functional global teams and translating complex data into actionable business strategies.

### **CORE SKILLS**

---

- **Data Analysis & Reporting:** Data Validation, Data Cleaning, Transformation, Visualization, Statistical Analysis, Trend Forecasting, Business Intelligence, KPI Tracking
- **Technical Tools:** Python (Pandas, NumPy, Matplotlib), SQL, MATLAB, MySQL, Advanced Excel (Pivot Tables, VLOOKUP)
- **Visualization Platforms:** Power BI, Tableau (basic), Matplotlib, Seaborn
- **Development Skills:** API Integration, Backend Development, Data Pipelines, Automation Scripts
- **Soft Skills:** Communication, Problem Solving, Analytical Thinking, Team Collaboration

### **EDUCATION**

---

**Masters of Science, Management Information Systems** – Lamar University, TX, USA (Jan 2023 – Dec 2024)  
**Bachelor of Technology, Electrical and Electronics Engineering** – JNTUK, India (2018 – 2022)

### **AREAS OF EXPERTISE**

---

- Skilled in analyzing complex datasets to extract actionable insights and support strategic decision-making.
- Proficient in creating interactive dashboards and reports using Power BI, Tableau, and Excel to track KPIs and trends.
- Experienced in writing and optimizing SQL queries to ensure efficient data retrieval and processing.
- Adept at performing statistical analysis and predictive modeling to forecast business outcomes.
- Strong background in data cleaning, transformation, and validation to maintain data accuracy and integrity.
- Capable of designing and implementing ETL pipelines for seamless data integration from multiple sources.
- Knowledgeable in data warehousing concepts and BI reporting for enterprise-level analytics.
- Collaborative in working with cross-functional teams to translate business needs into analytical solutions.

### **WORK EXPERIENCE**

---

**Morgan Stanley, USA**  
**Data Analyst**

**Feb 2025 – present**

- Conduct deep-dive data analysis on financial markets, trading performance, and client portfolios to support strategic decisions.
- Develop and maintain interactive dashboards (Tableau/Power BI) to track KPIs across risk, compliance, and trading operations.
- Build SQL queries and optimize large-scale data pipelines for real-time reporting.
- Partner with risk management and compliance teams to identify anomalies and prevent regulatory breaches.
- Perform predictive modeling using Python/R for forecasting market trends and portfolio risks.
- Clean, normalize, and transform raw financial datasets to ensure accuracy, integrity, and compliance with SEC standards.
- Automate recurring reporting processes, reducing manual effort and turnaround time by 40%+.
- Collaborate with global teams (U.S., EMEA, APAC) to align data strategies with business needs.
- Conduct root-cause analysis on data quality issues, ensuring reliable analytics for trading and risk decisions.

#### **Projects Undertaken:**

- **Global Risk Dashboard Development** – Designed a real-time Tableau dashboard consolidating trading risk exposure across asset classes (equities, bonds, derivatives), improving risk visibility for senior leadership.
- **Trade Surveillance Automation** – Developed Python scripts to detect suspicious trading patterns and compliance breaches, enabling early alerts to risk and compliance teams.
- **Client Profitability Model** – Built a financial model in SQL + Python to analyze client-level profitability, helping relationship managers prioritize high-value accounts.

- Provided ongoing support and enhancements to deployed solutions, ensuring high availability and user satisfaction.
- Designed, coded, and maintained backend data pipelines to process IoT and sensor-driven datasets.
- Developed REST APIs to enable seamless integration between data services and visualization platforms.
- Engineered Unity-based interactive dashboards for advanced data storytelling and real-time monitoring.
- Collaborated with cross-functional teams to define requirements for data visualization and reporting solutions.
- Optimized backend code and queries, improving data flow efficiency by 20%.
- Implemented database schemas and ensured proper indexing for high-volume data transactions.
- Built reusable backend components to accelerate development of data visualization applications.
- Conducted unit testing and debugging, ensuring reliability and accuracy of backend services.
- Created CI/CD pipelines to automate deployments of backend APIs and visualization modules.
- Coordinated with UI/UX designers to translate raw data into user-friendly, interactive dashboards.
- Documented system architecture, API workflows, and visualization frameworks for maintainability.

**Projects Undertaken:**

- IoT Data Pipeline Development – Designed backend pipelines in Python and Node.js to process sensor data from 100K+ IoT devices, reducing latency by 25%.
- Interactive Visualization Dashboard – Created Unity-powered dashboards for manufacturing clients, enabling plant managers to monitor real-time production KPIs.
- API Integration for Smart Devices – Built and deployed REST APIs to integrate IoT devices with analytics dashboards, improving real-time decision-making.
- Data Flow Optimization – Refactored backend scripts and queries, reducing data processing time by 30% and cutting server costs.
- Automated Deployment Pipeline – Implemented Jenkins-based CI/CD for backend microservices and visualization modules, reducing release cycles by 40%.

**CERTIFICATIONS**

---

- Microsoft Certified: Power BI Data Analyst Associate
- Tableau Certified Data Analyst
- AWS Certified Data Analytics

**ACADEMIC PROJECT**

---

**Fuzzy Logic Controller-Based Boost Converter for MPPT in PV System (JNTUK)**

- Developed a MATLAB/Simulink-based model using fuzzy logic to optimize solar panel output.
- Implemented a boost converter to enhance energy extraction efficiency from photovoltaic modules.

**ACHIEVEMENTS & ACTIVITIES**

---

- Winner – Group Discussion Competition, Abhinayam 2021
- Recognized for Public Speaking, Analytical Reasoning, and Critical Thinking in multiple debate events
