

Stephanie Osifo

Atlanta, Georgia | 404-735-5425 / stephanieosifo@gmail.com

Professional Summary

Senior Clinical Data Manager with 12+ years of experience supporting global clinical trials across biotech, pharmaceutical, and CRO environments, with a strong focus on oncology studies. Proven expertise in leading end-to-end clinical data management activities from study start-up through database lock and data transfer, ensuring compliance with FDA, ICH-GCP, and CDISC standards. Experienced in serving as the primary Data Management lead, overseeing CRO and vendor performance, and managing complex oncology data including tumor assessments, biomarkers, and safety endpoints. Adept at cross-functional collaboration with Clinical Operations, Biostatistics, Medical Monitoring, and Safety teams to deliver high-quality, regulatory-ready data within aggressive timelines.

Core Technical & Data Management Skills

- Clinical Data Management (CDM) – End-to-End Study Lifecycle
- CRF / eCRF Design, Development & Review
- Clinical Data Collection, Review & Validation
- Database Design, Build, UAT, Validation & Lock
- Edit Check Specification & Validation Testin
- Data Metrics, Dashboards, Status Tracking & Reporting
- Medical Coding Oversight (MedDRA, WHODrug)
- External Data Reconciliation (Labs, PK/ADA, Biomarkers, Imaging, ECG)
- CDISC Standards: CDASH, SDTM, ADaM
- Regulatory Compliance (FDA, ICH, GCP)
- Data Transfers & Snapshot Management
- SOP Development, Review & Compliance

Systems & Tools

- EDC: Medidata Rave, Medrio, iMednet, Veeva Clinical, Inform, Endpoint
- CTMS & Data Review Tools (JReview)
- SAS, Microsoft Excel

Therapeutic Areas

- **Primary:** Oncology
- **Additional:** Dermatology, Infectious Disease, Cell & Gene Therapy, Gastroenterology, CNS

Leadership & Project Management

- Study & Team Leadership (Line Management, Coaching, Performance Reviews)
- CRO & Vendor Oversight
- SOP Development & Compliance
- Cross-Functional Collaboration
- Budget, Resource & Timeline Management
- Executive & Stakeholder Reporting
- Timeline Management & Risk Mitigation

Professional Experience

LOXO Oncology, Remote

Senior Clinical Data Manager

10/2024 – 12/2025

- Served as Senior Clinical Data Manager for global oncology clinical trials, leading end-to-end data management activities from study start-up through database lock in alignment with sponsor SOPs and regulatory requirements.
- Acted as the primary Data Management point of contact for assigned oncology studies, collaborating closely with CROs, Clinical Operations, Biostatistics, Medical Monitoring, and Safety teams.
- Led and oversaw oncology-specific data review and cleaning activities, including tumor assessments, response criteria (RECIST), safety data, biomarkers, and time-to-event endpoints.
- Directed the design, build, validation, and maintenance of oncology clinical databases, ensuring compliance with CDISC/CDASH standards and sponsor data standards.
- Reviewed and approved CRF designs, database specifications, edit checks, and validation documentation, ensuring alignment with complex oncology protocols and endpoints.
- Oversaw medical coding activities (MedDRA, WHODrug) and external data reconciliation (central labs, imaging, PK, biomarkers), ensuring data completeness and integrity.
- Managed CRO deliverables, timelines, and performance, proactively identifying risks and driving resolution to ensure on-time database lock and data transfers for statistical analysis.

Advance Research Inc. Atlanta, GA

Clinical Data Manager III

04/22 to 09/24

- Performed and supported data management activities for two studies across different indications.
- Oversaw the collection, validation, and processing of clinical trial data.
- Designed, generated, and reviewed status and metric reports as required.
- Developed and implemented data management procedures for clinical trials.
- Supported and facilitated the review of medical coding for validity and completeness.
- Ensured compliance with applicable regulations, study protocols, and standard operating procedures in India.
- Maintained the highest data quality standards throughout the data lifecycle, from data collection through database lock.
- Generated and reviewed data listings, summaries, and reports for clinical study reports.
- Served as a primary or backup point of contact for data management-related issues.
- Collaborated with study team members to resolve data-related issues and discrepancies
- Stayed current with industry best practices, technological advancements, and regulatory requirements related to clinical data management.

ProPharma Group, Atlanta, GA

Clinical Data Manager (Contract)

11/21 to 04/22

- Performed and supported data management activities for two studies in different indications.
- Design, generate, and review status metric reports as needed.
- Performed archiving of study databases and related documents.
- Provided input to timelines to ensure timely completion of assigned tasks.
- Provide regular status updates and keep the team and management informed of any changes.
- Working collaboratively to make sure data is collected, managed and reported clearly, accurately, and securely.
- Perform detailed reconciliation of external data (PK/ADA, biomarker, imaging, ECG) against internal databases and study protocols.
- Coordinate with vendors to resolve data issues, escalate concerns, and drive process improvements.

Labcorp (Covance) (Contract), Atlanta, GA

Lead Data Manager,

01/19 to 11/21

- Performed and supported data management activities for multiple studies in different indications. The responsibilities include CRF development, CRF review, database specifications, user acceptance testing, query resolution, data review and data completion.
- Provides leadership, direction, and management for the LabCorp clinical affairs team members to ensure

accurate, timely, and consistent clinical data collection.

- Strategically leverages external relationships with counterparts at CROs, central laboratories, and other service providers to ensure performance requirements, data quality standards, study objectives, and timelines are met.
- Assists cross-functional team members in drafting documents which become part of regulatory submissions.
- Ensuring the Case Report Form is designed according to the Clinical Protocol, utilizing Data Standards where possible, and document deviations, if necessary.
- Reconciliation of external data (PK/ADA, biomarker, imaging, ECG) against internal databases and study protocols.

PPD, Atlanta, GA

Clinical Data Manager I & II

02/17 to 01/19

- Actively participates in review of clinical research documents (Protocols, Case Report forms, Statistics analysis plans.)
- Create and maintain a Data Management plan (DMP) through the lifespan of the project and ensure that DMP is followed in accordance with the study's design and requirements.
- Develop Case Report Forms (CRF) paper and /or electronic.
- Develops and coordinates all information needed for UAT (User Acceptance Testing) including: test scripts, edit checks, issue logs, etc.
- Responsible for ensuring the integrity of the data and providing recommendations for corrective actions if necessary.
- Perform detailed reconciliation of external data (PK/ADA, biomarker, imaging, ECG) against internal databases and study protocols.
- Coordinate with the team regarding data validation and lock of the database and making sure that data system is in accordance with national/international regulatory guidelines.
- Represent clinical data management in meetings with internal cross-functional and external customers
- Act as the Lead data management team member in clinical development
- Performed and supported data management activities for multiple studies in different indications. The responsibilities include CRF development, CRF review, database specifications, user acceptance testing, query resolution, data review and data completion.
- Interact with clinical operations, medical monitors and biostatistics/Programming periodically on the progress on the data entry, and quality
- Interact with external data management vendors and subsidiaries of the company

PPD, Atlanta, GA

Clinical Data Associate I & II

01/13 to

01/17

- Oversaw data- management lifespan of clinical trials, constructing and verifying reports and results.
- Designed and maintained database, reports, queries and data- analysis tools. Performed data entry checks and reviews, conducted audits and coding; and outlined and validated protocols.
- Managed high- priority projects, resolve data discrepancies, errors. And omission with diligence and speed.
- Developed clear clinical data set, allowing collection of large amounts of cross-boundary data content with very high accuracy
- Completed data management activities to meet project timelines from study start up to database lock.
- Data management activities to ensure accuracy and consistency of clinical databases for subsequent analysis and reporting.
- Assisted with data management start up activities, database cleaning and lock activities including review and development of case report forms, data management plans, and database development.
- Reviewed and processed clinical trial data to ensure completeness, accuracy and consistency of clinical trials databases.
- Assisted with identifying data trends and/or issues.
- Worked closely with Clinical Affairs project team members to prepare and ensure proper execution of data management plans and manage data management projects from beginning to end.
- Assisted completing requests when working with outside vendors (e.g., clinical laboratories) on collection,

transmittal and transfer of study specific data.

- Ensured data system compliance by following the established guidelines of national and international regulatory authorities.
- Participated in cross functional team meetings as requested

Hart County Hospital, Atlanta, GA

Clinical Data Coordinator

01/10 to 12/12

- Handled administrative activities generally associated with the conduct of clinical trials. Provides guidance to less experienced staff.
- Managed the research project databases, develop flow sheets and other study related documents, and completed source documents/case report forms.
- Interfaced with research participants determines eligibility and consents study participants according to protocol.
- Approved orders for supplies and equipment maintenance. Assists in developing recruitment strategies and conducting screenings for study participants including interviews and questionnaires. Supervises collection of study specimens and processing.
- Established case packages for study procedures, monitors scheduling of procedures and charges, coordinates other services as needed.
- Ensured compliance with research protocols, reviews case report forms and audits for accuracy with source documents, attends monitoring meetings with sponsors. Prepare regulatory submissions.
