PROFESSIONAL SUMMARY

Full Stack Developer with experience building secure, scalable applications across the full software development lifecycle. Proven ability to deliver end-to-end solutions spanning frontend, backend, databases, and cloud infrastructure. Seeking a Full Stack Developer role to leverage my expertise in Java, React, SQL, and cloud technologies to build impactful products.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, C/C++, SQL (PostgreSQL), HTML/CSS

Frameworks & Tools: Spring Boot, React/React Native, Node.js, Next.js, Tailwind CSS, REST APIs, JWT, Kafka

Cloud & DevOps: AWS, Docker, CI/CD, Git, Maven, Gradle, ServiceNow, Geneos

Practices: Agile/Scrum, SDLC, Unit/Integration Testing, UX/UI Collaboration, microservices

CERTIFICATIONS

AWS Certified Cloud Practitioner | Amazon Web Services April 2025

Google Cybersecurity Certificate | Google October 2023

EXPERIENCE

Full Stack Developer Contractor | Northeast Ohio Medical University, Remote Jul 2025 – Dec 2025

- Developer of Neovations Bench To Bedside, a platform enabling medical researchers to showcase projects, connect with peers, and find faculty mentors.
- Architected and implemented a complete application stack: **React Native** frontend, **Spring Boot** backend, **PostgreSQL** database, and dozens of **RESTful API** endpoints.
- Engineered secure **JWT** authentication and a custom **real-time** WebSocket messaging backend allowing for hundreds of concurrent users.
- Established a **CI/CD** pipeline using Github Actions for automated building, and deployment, achieving 90% code coverage through **unit/integration testing**.
- Partnered directly with stakeholders to define requirements and iterate on **UX/UI** through regular feedback sessions.

Site Reliability Engineer Contractor | JP Morgan Chase, Chicago, IL Apr 2025 – Jul 2025

- Monitored **mission-critical** payment systems that processed transactions valued up to tens of millions of dollars daily.
- Triageed and resolved 30–50 service tickets daily using **Geneos** and **ServiceNow**, ensuring rapid incident response.
- Proactively built a **Python automation tool** that reduced manual SSH key provisioning by **10 hours per week**, eliminating manual configuration errors.
- Collaborated cross-functionally across teams to maintain **99%+** system uptime.

Java Full Stack Developer | Revature, Remote March 2024 – Apr 2025

- Built **event-driven microservices** using Kafka, Firebase, and Stripe, deploying **Docker** containerized services to **AWS** with the capacity for 1000+ users.
- Collaborated in **Agile** teams of 2-15 developers using **Git**, **CI/CD** pipelines, and **Maven** for build automation that improved software stability by **30%**.
- Completed an intensive enterprise full stack development training program covering the full **SDLC** and production-ready development practices.

PROJECTS

Codebase Retrieval-Augmented Generation (RAG) Platform | Spring Boot, PostgreSQL, pgvector, Docker

- Built a backend system that **indexed large codebases** and enabled natural-language querying with file and line-level citations.
- Implemented **semantic vector search** and automated embedding pipelines using PostgreSQL and pgvector to ground AI responses.

EDUCATION

Bachelor of Science in Computer Science | Sonoma State University, Rohnert Park, CA
