EDUCATION

University of California, Santa Barbara

Class of 2024

Bachelor of Science in Computer Engineering

- **Relevant Courses:** Data Structures and Algorithms · Advanced Applications Programming · Computer Networks · Artificial Intelligence · Computer Vision · Object Oriented Design and Implementation · Computer Security · Computer Architecture · Operating Systems · Embedded Systems

RELEVANT EXPERIENCE

Forta Network (Senior Capstone) | *Software Engineer*

September 2023 – March 2024

- Led a 5-person team in developing an advanced chatbot solution in collaboration with Forta, a blockchain security bot provider
- Proposed and executed the use of a vector database that significantly enhanced project success by reducing search times by 90%
- Collaborated with team members in an Agile environment, utilizing kanban boards, stand-up meetings, and retrospectives to foster efficient project development

PROJECTS

BotWeiser | *Python, JavaScript, React, Flask, Docker*

September 2023 – March 2024

- Engineered an AI-powered search engine for Forta Network, enhancing blockchain security bot discovery with intelligent chatbot recommendations and a streamlined user interface
- Utilized LLM to increase chatbot intelligence, delivering more relevant recommendations and accomplishing 80% accuracy in correctly servicing blockchain security bot inquiries

Video Analyzer | *Python, JavaScript, AWS, React, Flask*

May 2023 – August 2023

- Designed and developed a web application that analyzes videos based on user-defined parameters
- Implemented a RESTful API using Flask to handle video transcript retrieval and analyzation requests, ensuring efficient and secure data processing
- Successfully deployed the frontend on AWS S3 and the backend on AWS EC2, ensuring seamless operation and accessibility

Team Legacy Code Project | *Java, JavaScript, React, Node.js, Git* September 2021 – December 2021

- Resolved critical bugs and refined UI features in a large-scale legacy codebase exceeding 10,000 lines, ensuring improved functionality and user interface effectiveness
- Implemented an efficient CI/CD pipeline to automate build processes and ensure successful deployment across both production and QA environments
- Performed quality assurance using Storybook and test files, achieving 100% test coverage and passing all mutation tests within the Maven environment, resulting in a 40% decrease in post-deployment bugs

Ultrasonic Radar System | *C*

April 2022 – June 2022

- Developed an enhanced ultrasonic radar system by integrating diverse peripherals, showcasing 100% detection accuracy and extending the scan range 50ft
- Created firmware utilizing the C programming language to manage data processing, implement control algorithms, and various sensors
- Utilized I2C and UART protocols to ensure seamless communication between peripherals, the microcontroller, and the computer system, reducing data transmission errors by 15%

TECHNICAL SKILLS

Languages: Python, C, C++, C#, Java, JavaScript, SQL, HTML, CSS, Verilog, Assembly

Frameworks: React, Flask, Spring Boot, Node.js

Developer Tools: Git, AWS, Heroku, Maven, nvm, Swagger UI, VS Code
